

The principle of prevention and precaution in osh

#1. Avoiding Risks

Avoiding risks is the most proactive step in any health and safety policy. It's the principle that if a potential risk can be entirely avoided

#2. Evaluating The Risks Which Cannot Be Avoided

This principle of prevention refers to the necessity of thorough risk assessments for potential hazards that can't be fully eliminated.

#3. Combating The Risks At Source

This preventative approach is beneficial because it generally provides more effective and long-lasting protection than strategies attempting to protect workers from the consequences of uncontrolled hazards.

#4. Adapting The Work Environment To The Individual

This principle of prevention refers to the customization of work conditions and processes to meet the needs and capabilities of individual workers, thereby reducing the potential for risk and harm

#5. Adapting To Technical Progress

This principle of prevention underlines the importance of leveraging technological advancements to improve health and safety in the workplace. As technology evolves rapidly, it presents many opportunities to minimize risks, streamline processes, and enhance overall worker well-being.

#6. Replacing The Dangerous By The Non-dangerous, Or The Less Dangerous

The principle of "Replacing the dangerous with the non-dangerous or the less dangerous" focuses on substituting high-risk elements in the workplace with alternatives that pose a lower risk or no risk at all.

#7. Developing A Coherent Overall Prevention Policy

This policy should be consistent and clear and encompass all aspects of the workplace, from technology and work organization to social relationships and working conditions.
