Coelli, Dodla Sai Prasada Rao, Christopher J. O'Donnell, George Edward Battese, 2005-12-06 The second edition of this book has been written for the same audience as the first edition It is designed to be a first port of call for people wishing to study efficiency and productivity analysis The book provides an accessible introduction to the four principal methods involved econometric estimation of average response models index numbers data envelopment analysis DEA and stochastic frontier analysis SFA For each method we provide a detailed introduction to the basic concepts give some simple numerical examples discuss some of the more important extensions to the basic methods and provide references for further reading In addition we provide a number of detailed empirical applications using real world data The book can be used as a textbook or as a reference text As a textbook it probably contains too much material to cover in a single semester so most instructors will want to design a course around a subset of chapters For example Chapter 2 is devoted to a review of production economics and could probably be skipped in a course for graduate economics majors However it should prove useful to undergraduate students and those doing a major in another field such as business management or health studies *Canadian Business and Economics* Barbara E.
