Fundamentals Of Argumentation Theory:

Fundamentals of Argumentation Theory Frans H. van Eemeren, Rob Grootendorst, Ralph H. Johnson, Christian Plantin, Charles A. Willard, 2013-11-05 Argumentation theory is a distinctly multidisciplinary field of inquiry. It draws its data, assumptions, and methods from disciplines as disparate as formal logic and discourse analysis, linguistics and forensic science, philosophy and psychology, political science and education, sociology and law, and rhetoric and artificial intelligence. This book presents the growing group of interested scholars and students with a problem of access, since it is even for those active in the field not common to have acquired a familiarity with relevant aspects of each discipline that enters into this multidisciplinary matrix. This book offers its readers a unique comprehensive survey of the various theoretical contributions which have been made to the study of argumentation. It discusses the historical works that provide the background to the field and all major approaches and trends in contemporary research. Argument has been the subject of systematic inquiry for twenty-five hundred years. It has been graced with theories such as formal logic or the legal theory of evidence that have acquired a more or less settled provenance with regard to specific issues. But there has been nothing to date that qualifies as a unified general theory of argumentation in all its richness and complexity. This being so, the argumentation theorist must have access to materials and methods that lie beyond his or her home subject. It is precisely on this account that this volume is offered to all the constituent research communities and their students. Apart from the historical sections, each chapter provides an economical introduction to the problems and methods that characterize a given part of the contemporary research program. Because the chapters are self-contained, they can be consulted in the order of a reader's interests or research requirements. But there is value in reading the work in its entirety. Jointly authored by the very people whose research has done much to define the current state of argumentation theory and to point the way toward more general and unified future treatments, this book is an impressively authoritative contribution to the field. **Fundamentals of**

Crucial Concepts in Argumentation Theory F. H. van Eemeren, 2001 *Crucial Concepts in Argumentation Theory* is a collection of essays that discuss a series of important issues in the study of argumentation The essays describe the concepts that are crucial to argumentational research and the various ways these concepts have been approached The essays explore such issues as points of view unexpressed premises argument schemes argumentation structures fallacies argument interpretation and reconstruction and argumentation in law Each of the essays provides interested readers with an overview of the literature that can serve as a point of departure for further study

Topical Themes in Argumentation Theory Frans H. van Eemeren, Bart Garssen, 2012-05-05 *Topical Themes in Argumentation Theory* brings together twenty exploratory studies on important subjects of research in contemporary argumentation theory The essays are based on papers that were presented at the 7th Conference of the International Society for the Study of Argumentation ISSA in Amsterdam in June 2010 They give an impression of the nature and the variety of the kind of research that has recently been carried out in the study of argumentation The volume starts with three essays that provide stimulating theoretical perspectives on argumentation Subsequently some views are explained on the intriguing topics of dissensus and deep disagreement After a discussion of three different approaches to the treatment of types of argumentation some classical themes from antique argumentation theory are revisited The new research area of visual argumentation is explored in the next part The volume concludes with three reports of experimental studies concerning argumentative discourse

Reflections on Theoretical Issues in Argumentation Theory Frans H. van Eemeren, Bart Garssen, 2015-08-08 This volume presents a selection of papers reflecting key theoretical issues in argumentation theory Its six sections are devoted to specific themes including the analysis and evaluation of argumentation argument schemes and the contextual embedding of argumentation The section on general perspectives on argumentation discusses the trends of empiricalization contextualization and formalization offers descriptions of the analytical and evaluative tools of informal logic and highlights selected principles that argumentation theorists do and do not agree upon In turn the section on linguistic approaches to argumentation focuses on the problem of distinguishing between explanation and argument while also elaborating on the role of verbal indicators of argument schemes All essays included in this volume point out notable recent developments in the study of argumentation

A Systematic Theory of Argumentation Frans H. van Eemeren, Robert Grootendorst, Rob Grootendorst, 2004 In this book two of the leading figures in argumentation theory present a view of argumentation as a means of resolving differences of opinion by testing the acceptability of the disputed positions Their model of a critical discussion serves as a theoretical tool for analyzing evaluating and producing argumentative discourse This is a major contribution to the study of argumentation and will be of particular value to professionals and graduate students in speech communication informal logic rhetoric critical thinking linguistics and philosophy

The Death of Argument J.H. Woods, 2013-11-09 The present work is a fair record of work I've done on the fallacies and related matters in the fifteen years since 1986 The book may be seen as a sequel to *Fallacies* Selected papers 1972 1982 which I wrote with Douglas Walton and which appeared in 1989 with Foris This time I am on my own Douglas Walton has long since found his own voice as the saying has it and so have I Both of us greatly value the time we spent performing duets but we also recognize the attractions of solo work If I had to characterize the difference that has manifested itself in our later work I would venture that Walton has strayed more and I less from what has come to be called the Woods Walton Approach to the study of fallacies Perhaps on reflection stray is not the word for it inasmuch as Walton's deviation from and my fidelity to the WWA are serious matters of methodological principle The WWA was always conceived of as a way of handling the analysis of various kinds of fallacious argument or reasoning It was a response to a particular challenge Hamblin 1970 The challenge was that since logicians had allowed the investigation of fallacious reasoning to fall into disgraceful disarray it was up to them to put things right Accordingly the WWA sought these repairs amidst the rich pluralisms of logic in the 1970s and beyond

[Argument in Composition](#) John Ramage, Micheal Callaway, 2009-09-14 ARGUMENT IN COMPOSITION provides access to a wide range of resources that bear on the teaching

of writing and argument The ideas of major theorists of classical and contemporary rhetoric and argument from Aristotle to Burke Toulmin and Perelman are explained and elaborated especially as they inform pedagogies of argumentation and composition

Systematic Approaches to Argument by Analogy Henrique Jales Ribeiro, 2014-07-09 The present volume assembles a relevant set of studies of argument by analogy which address this topic in a systematic fashion either from an essentially theoretical perspective or from the perspective of it being applied to different fields like politics linguistics literature law medicine science in general and philosophy All result from original research conducted by their authors for this publication Thus broadly speaking this is an exception which we find worthy of occupying a special place in the sphere of the bibliography on the argument by analogy In effect most of the contexts of the publications on this topic focus on specific areas for example everyday discourse science or law theory while underestimating or sometimes even ignoring other interdisciplinary scopes as is the case of literature medicine or philosophy The idiosyncrasy of this volume is that the reader and the researcher may follow the development of different theoretical outlooks on argument by analogy while measuring the scope of its greater or lesser application to the aforementioned areas as a whole

The Concept of Argument Harald R. Wohlrapp, 2014-06-26 Arguing that our attachment to Aristotelian modes of discourse makes a revision of their conceptual foundations long overdue the author proposes the consideration of unacknowledged factors that play a central role in argument itself These are in particular the subjective imprint and the dynamics of argumentation Their inclusion in a four dimensional framework subjective objective structural procedural and the focus on thesis validity allow for a more realistic view of our discourse practice Exhaustive analyses of fascinating historical and contemporary arguments are provided These range from Columbus's advocacy of the Western Passage to India over the trial of King Louis XVI during the French Revolution to today's highly charged controversies surrounding euthanasia and embryo research Excavating foundational issues such as the purpose of argument itself assent of an audience or critical examination of validity claims and the contested role of argument as a generator of knowledge the book culminates in a discussion of the relationship between rationality and reasonableness and criticizes the restrictions of rational argument relying on fixed logical economic or cultural criteria that in reality are mutable Here a true open argument requires the infusion of Paul Lorenzen's principle of transsubjectivity which recognizes but transcends the partiality of the individual and which can be seen in the pragmatic and expanding consensus that humanity can control itself to safeguard the future of a fragile damaged world

Groundwork in the Theory of Argumentation J. Anthony Blair, 2011-10-20 J. Anthony Blair is a prominent international figure in argumentation studies He is among the originators of informal logic an author of textbooks on the informal logic approach to argument analysis and evaluation and on critical thinking and a founder and editor of the journal *Informal Logic* Blair is widely recognized among the leaders in the field for contributing formative ideas to the argumentation literature of the last few decades This selection of key works provides insights into the history of the field of argumentation theory and various

related disciplines It illuminates the central debates and presents core ideas in four main areas Critical Thinking Informal Logic Argument Theory and Logic Dialectic and Rhetoric *Reasonableness and Effectiveness in Argumentative Discourse* Frans H. van Eemeren, 2015-08-27 This volume presents 50 contributions on the themes of reasonableness and effectiveness and their connections which are central issues in argumentation theory It discusses van Eemeren's views on the study of argumentation the approach to argumentation adopted in pragma dialectics pragma dialectical perspectives on the dialectical and pragmatic dimensions of argumentative discourse the notion of strategic maneuvering the pragma dialectical method of analyzing argumentative discourse the treatment of fallacies as violations of rules for critical discussion pragma dialectical views on context the role of logic verbal indicators of argumentative moves and argument schemes and the process of writing and rewriting argumentative texts The pragma dialectical quantitative approach to empirical research on argumentative discourse is illustrated by reporting on selected illustrative experimental studies as well as qualitative studies of historical cases **The Argument of Mathematics** Andrew Aberdein, Ian J Dove, 2013-07-01 Written by experts in the field this volume presents a comprehensive investigation into the relationship between argumentation theory and the philosophy of mathematical practice Argumentation theory studies reasoning and argument and especially those aspects not addressed or not addressed well by formal deduction The philosophy of mathematical practice diverges from mainstream philosophy of mathematics in the emphasis it places on what the majority of working mathematicians actually do rather than on mathematical foundations The book begins by first challenging the assumption that there is no role for informal logic in mathematics Next it details the usefulness of argumentation theory in the understanding of mathematical practice offering an impressively diverse set of examples covering the history of mathematics mathematics education and perhaps surprisingly formal proof verification From there the book demonstrates that mathematics also offers a valuable testbed for argumentation theory Coverage concludes by defending attention to mathematical argumentation as the basis for new perspectives on the philosophy of mathematics The Thinking Historian Eric W. Sager, 2025-01-27 What is history What are historians doing when we create our histories The need for answers is more urgent than ever We live in an era when history is often rejected or ignored and when all teachers of history confront formidable challenges In the culture of screen capitalism and social media historical knowledge is evaded in an expanding present minded consciousness How can history be defended and what is it that we are defending This book argues that history is a mode of thinking a form of imaginative reasoning with its own informal logic In non technical language and using examples from important works of history the book defines core elements in historical thinking These include contingency complexity temporality parts and wholes consilience perspectives analogy and abduction These elements are subsumed into the concept of imaginative reasoning The overall argument echoes the work of hermeneutic philosophers History is a disciplined imagination tempered and empowered by its forms of reasoning It embraces ethical imperatives that the historian has a duty to declare Equipped with such understanding

historians may answer the many rejections of history and secure its place in our shared futures A Rhetoric of Meanings Gergana Apostolova, 2015-09-04 This book presents an in depth analysis of language s role as the tool and environment for human survival on Earth examining its ability to provide an unlimited space for telling individual stories that bear the knowledge of mankind s self significance The book is the result of a 20 year long composite study of language phenomenology grounded in the interactions of Bulgarian and English approached in a game like fashion where the play with language units transcends levels of meanings based on significances and explored through the four basic avatars of activated language the learner the teacher the translator and the creator of texts The book is divided into three sections the first details the motivation for this study and the design of the method of exploration This is followed by an application of this method to the talkative web in order to find ways of meeting the enormous demand for human content The final section brings together the colourful practices of activated language movement This book is not about the philosophy of language per se It is concerned with the practical field beyond the philosophy of language where the self identification of the Subject is brought to a higher stage of communicative creativity The rhetoric theory of argumentation is argued throughout the book to be the relevant ground for building a holistic tool of language learning where language acquisition is seen as the capability of the subject to construct worlds in a universe whose leading structure involves the rhetoric criteria of ethos pathos and logos on the one hand and the self identifying choice of meanings to situations of complex nature on the other As such the book is primarily concerned with linguistics rhetoric semiotics of culture ethics and language learning viewed through a philosophical preoccupation with humanity *Handbook of the Logic of Argument and Inference* R.H. Johnson, H.J. Ohlbach, Dov M. Gabbay, John Woods, 2002-09-11 The Handbook of the Logic of Argument and Inference is an authoritative reference work in a single volume designed for the attention of senior undergraduates graduate students and researchers in all the leading research areas concerned with the logic of practical argument and inference After an introductory chapter the role of standard logics is surveyed in two chapters These chapters can serve as a mini course for interested readers in deductive and inductive logic or as a refresher Then follow two chapters of criticism one the internal critique and the other the empirical critique The first deals with objections to standard logics as theories of argument and inference arising from the research programme in philosophical logic The second canvasses criticisms arising from work in cognitive and experimental psychology The next five chapters deal with developments in dialogue logic interrogative logic informal logic probability logic and artificial intelligence The last chapter surveys formal approaches to practical reasoning and anticipates possible future developments Taken as a whole the Handbook is a single volume indication of the present state of the logic of argument and inference at its conceptual and theoretical best Future editions will periodically incorporate significant new developments *Coalescent Argumentation* Michael A. Gilbert, 2013-11-05 Coalescent Argumentation is based on the concept that arguments can function from agreement rather than disagreement To prove this idea Gilbert first discusses how

several components emotional visceral physical and kisceral intuitive are utilized in an argumentative setting by people everyday These components also characterized as modes are vital to argumentative communication because they affect both the argument and the resulting outcome In addition to the components modes this book also stresses the goals in argumentation as a means for understanding one s own and one s opposer s positions Gilbert argues that by viewing positions as complex human events involving a variety of communicative modes we are better able to find commonalities across positions and therefore move from conflict to resolution By focusing on agreement and shared goals in all modes arguers can coalesce diverse positions and more easily distinguish between minor or unrelated differences and core disagreements This permits much greater latitude for locating shared beliefs values and attitudes that will lead to conflict resolution

Paul's Argumentation in Galatians Mika Hietanen,2007-07-26 Galatians is a polemical letter which contains a substantial amount of argumentative passages Paul evidently wanted to persuade by using the best arguments possible to convince his addressees Using a state of the art method from the discipline of argumentation analysis Paul s argumentation can be analysed with a precision that standard exegetical methods cannot provide The pragma dialectical method developed in Amsterdam facilitates an analysis which is both descriptive and normative On the one hand Paul s argumentation can be described such as the relationship between premisses and conclusions the structure of the arguments and features relating to rhetorical strategy On the other hand the method makes it possible to evaluate Paul s argumentation against a set of rules for sound reasoning Fallacies and problematic arguments can be described accurately The spiritual nature of Paul s matters do not relieve him of rationality and Paul himself does not argue as if it did Paul s argumentation is found problematic in several respects There is a tension in the text Paul works a great deal to argue his claims while at the same time giving the impression that he merely wants to declare his standpoints and does not want to carry out an argumentation at all Many of the conclusions are presented as self evident even when they are not Paul s style is far from an ideal model of the resolution of a dispute Paul relies heavily on an argumentative strategy with maximal use of rhetorical devices The analysis shows that a contemporary method of argumentation analysis provides tools necessary to adequately describe and understand both individual arguments and the overarching strategy of the argumentation in a Pauline text
