Fundamentals Of Structured Program Design:

Fundamentals of Structured Program Design Dan Robinson, 2000 This book provides an introduction to programming design using a modular approach The book is generic language independent and is concepts oriented covering documentation flowcharting structured programming pseudo coding charts program design control breaks arrays input files database processing and interactive online programming BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved **Structured Design** Edward Yourdon, Larry L. Constantine, 1978 **Principles of Program Design** M. A. Jackson, 1975 The original program design text this book is about programming for data processing applications and it presents a coherent method and procedure for designing systems programs and components that are transparently simple and self evidently correct The main emphasis is on the structure on the dissection of a problem into parts and the arrangement of those parts to form a solution Exercises and questions for discussion are given at the end of almost every chapter **Fundamentals of Business Architecture Modeling** Václav Řepa, Oleg Svatoš, 2024-07-29 This textbook covers business architecture modeling in all its essential aspects Based on the MMABP Philosophical Framework for Business System Modelling it provides a comprehensive overview of four basic dimensions of the business system model together with their essential relationships The methods techniques and tools are described and explained for every model type with examples Special attention is paid to integrating all dimensions using the Business System Consistency Framework The book is divided into six chapters Chapter 1 introduces business architecture and the approaches and tools to model it MMABP is introduced with its basic principles and put in context with other approaches to business architecture modeling Chapter 2 then deals with the modeling of a business system in terms of its objectives The basic principles of process modeling the distinction between global and detailed views of processes and an approach to managing the detail of the process model in the form of four levels of process abstraction are introduced Chapter 3 describes the modeling of a business system in terms of its underlying concepts and the business rules that apply within the modeled system The basic principles of object modeling the distinction between global and detailed views of objects and the approach to capturing the object life cycles are introduced Chapter 4 presents a simplified metamodel that describes how all models of the business system are related and consistency rules that guide the analysts to avoid possible inconsistencies Chapter 5 focuses on the implementation of the business system in an organization It describes the role and specifics of its information system explains the comprehensive procedure for building the process driven organization and reflects on the organizational maturity and its role in the further development of a process driven organization Eventually Chapter 6 presents a complex example of the application of MMABP including the functioning prototype of the process system The prototype is then used to illustrate an essential difference between the conceptual and technology levels of models and the importance of distinguishing between them This textbook is written for students in enterprise architecture or business information systems

as well as for professionals developing enterprise information systems or process driven organizations
