Kollef, Emilio Díaz, Alejandro Rodríguez, 2010-05-28 Infections and their complications are a very important clinical area in the intensive care unit setting

Community acquired infections and nosocomial infections both contribute to the high level of disease acquisition common among critically ill patients. The accurate diagnosis of nosocomial infections and the provision of appropriate therapies including antimicrobial therapy effective against the identified agents of infection have been shown to be important determinants of patient outcome. Critical care practitioners are in a unique position in dealing with infectious diseases. They are often the initial providers of care to seriously ill patients with infections. Additionally, they have a responsibility to ensure that nosocomial infections are prevented and that antimicrobial resistance is minimized by prudently employing antibiotic agents. It is the editors' hope that this book will provide clinicians practicing in the intensive care unit with a reference to help guide their care of infected patients. To that end, they have brought together a group of international authors to address important topics related to infectious diseases for the critical care practitioner. *Textbook of Therapeutics* Richard A. Silvestri, 2012-12-06. The volume belongs to the series Topics in Anaesthesia and Critical Care edited by Prof Antonino Gullo. The titles of this series deal with different topics of critical care medicine. Aim of the volume is to describe the management of infections, in particular the diagnosis and treatment of pneumonia in the Intensive Care Unit; the book also deals with the management of antimicrobial resistance and on microbiological studies in critically ill patients. [Infections in Surgery](#) Massimo Sartelli, Raul Coimbra, Leonardo Pagani, Kemal Rasa, 2021-01-29. Although most clinicians are aware of the problem of antimicrobial resistance, most also underestimate its significance in their own hospital. The incorrect and inappropriate use of antibiotics and other antimicrobials as well as poor prevention and poor control of infections are contributing to the

development of such resistance Appropriate use of antibiotics and compliance with infection prevention and control measures should be integral aspects of good clinical practice and standards of care However these activities are often inadequate among clinicians and there is a considerable gap between the best evidence and actual clinical practice In hospitals cultural determinants influence clinical practice and improving behaviour in terms of infection prevention and antibiotics prescribing practice remains a challenge Despite evidence supporting the effectiveness of best practices many clinicians fail to implement them and evidence based processes and practices that are known to optimize both the prevention and the treatment of infections tend to be underused Addressing precisely this problem this volume offers an essential toolkit for all surgeons and intensivists interested in improving their clinical practices
