---

- **Information source**
- may either be analog or digital
  - In digital comm. system it is the discrete information which is processed and transmitted.
- Discrete information sources are characterized by
  - **Source alphabets**: these are letters, characters, symbols or special character available from the information source.
  - **Symbol rate**: rate at which the information source generate source alphabets, normally represented as symbols/ sec.
  - **Source alphabets probabilities**: The rate of occurrence of each source alphabet is different and hence the prob. of occurrence of each source alphabets become one of most important property
  - **Entropy of the source sequence**: the average information content per symbol in a long message. It is denoted by  $H$  & unit is bits per symbol.
  - **Source information rate**: It is defined as the product of the source entropy & symbol rate & has the unit of bits per second. It is denoted by  $R$ .
