*Hazards Due to Comets and Asteroids* Tom Gehrels, Mildred Shapley Matthews, A. M. Schumann, 1994 In 1993 the U S Department of Defense declassified information dealing with frequent explosions in the upper atmosphere caused by meteoric impact It is estimated that impacts have occurred of a magnitude equivalent to the atomic bomb detonated at Hiroshima Not all such space voyagers meet their end in the atmosphere however huge craters attest to the bombardment of earth over millions of years and a major impact may have resulted in the extinction of dinosaurs An impact in Siberia near the beginning of this century proves that such events are not confined to geologic time *Hazards Due to Comets and Asteroids* marks a significant step in the attempt to come to grips with the threats posed by such phenomena It brings together more than one hundred scientists from around the world who draw on observational and theoretical research to focus on the technical problems related to all aspects of dealing with these hazards searching for and identifying hazardous comets and asteroids describing their statistics and characteristics intercepting and altering the orbits of dangerous objects and applying existent technologies rocket boosters rendezvous and soft landing techniques instrumentation to such missions The book considers defensive options for diverting or disrupting an approaching body including solar sails kinetic energy impacts nuclear explosives robotic mass drivers and various propulsion systems A cataclysmic impact posing a threat to life on Earth is a possibility that tomorrow s technology is capable of averting This book examines in depth the reality of the threat and proposes practical measures that can be initiated now should we ever need to deal with it

deal with it      **Mitigation of Hazardous Comets and Asteroids** M. J. S. Belton, 2004-09-06 It is known that large asteroids and comets can collide with the Earth with severe consequences Although the chances of a collision in a person's lifetime are small collisions are a random process and could occur at any time This book collects the latest thoughts and ideas of scientists concerned with mitigating the threat of hazardous asteroids and comets It reviews current knowledge of the population of potential colliders including their numbers locations orbits and how warning times might be improved The structural properties and composition of their interiors and surfaces are reviewed and their orbital response to the application of pulses of energy is discussed Difficulties of operating in space near or on the surface of very low mass objects are examined The book concludes with a discussion of the problems faced in communicating the nature of the impact hazard to the public      **Comet and Asteroid Impact Hazards on a Populated Earth** John S. **Catastrophic Events Caused by Cosmic Objects** Vitaly Adushkin, Ivan Nemchinov, 2007-10-09 An asteroid or comet will inevitably strike the Earth some day and potentially cause great destruction This volume considers hazards due to collisions with cosmic objects particularly in light of recent investigations of impacts by the authors Each chapter written by an expert contains an overview of an aspect and new findings in the field Coverage describes and numerically estimates the main hazardous effects      **Comet/Asteroid Impacts and Human Society** Peter T. Bobrowsky, Hans Rickman, 2007-06-10 Leading specialists in various disciplines were first invited to a multidisciplinary workshop funded by ICSU on the topic to gain a better appreciation and perspective on the subject of comet asteroid impacts as viewed by different disciplines This volume provides a necessary link between various disciplines and comet asteroid impacts      **Global Catastrophic Risks** Nick Bostrom, Milan M. Cirkovic, 2008-07-04 A global catastrophic risk is one with the potential to wreak death and destruction on a global scale In human history wars and plagues have done so on more than one occasion and misguided ideologies and totalitarian regimes have darkened an entire era or a region Advances in technology are adding dangers of a new kind It could happen again In *Global Catastrophic Risks* 25 leading experts look at the gravest risks facing humanity in the 21st century including asteroid impacts gamma ray bursts Earth based natural catastrophes nuclear war terrorism global warming biological weapons totalitarianism advanced nanotechnology general artificial intelligence and social collapse The book also addresses overarching issues policy responses and methods for predicting and managing catastrophes This is invaluable reading for anyone interested in the big issues of our time for students focusing on science society technology and public policy and for academics policy makers and professionals working in these acutely important fields      *Advances in Solar Sailing* Malcolm Macdonald, 2014-02-03 This book presents the best contributions of the the Third International Symposium on Solar Sailing Glasgow 11-13 June 2013 It is a rapid snapshot of the state of the art of solar sail technology in 2013 across the globe capturing flight programs technology development programs and new technology and application

concepts The book contains contributions from all of the leading figures in the field including NASA JAXA ESA DLR as well as university and industry experts It therefore provides a unique reference point for the solar sail technology The book also includes key contributions from the prospective users of solar sail technology which will allow the technology to be considered by the user in this unique context *Perilous Planet Earth* Trevor Palmer, 2003-06-12 A readable account of the history of natural disasters throughout history *The Near Earth Asteroid Rendezvous Mission* C.T. Russell, 2012-12-06 Even before the present Administrator of NASA Daniel Goldin made the phrase better faster cheaper the slogan of at least the Office of Space Science that same office under the Associate Administrator of Lennard Fisk and its Division of Solar System Exploration under the direction of Wes Huntress had begun a series of planetary spacecraft whose developmental cost phase CID in the parlance of the trade was to be held to under 150M In order to get the program underway rapidly they chose two missions without the open solicitation now the hallmark of the program One of these two missions JPL's Mars Pathfinder was to be a technology demonstration mission with little immediate science return that would enable later high priority science missions to Mars Many of the science investigations that were included had significant foreign contributions to keep NASA's cost of the mission within the Discovery budget The second of these missions and the first to be launched was the Near Earth Asteroid Rendezvous mission or NEAR awarded to Johns Hopkins University's Applied Physics Laboratory This mission was quite different than Mars Pathfinder being taken from the list of high priority objectives of the science community and emphasizing the science return and not the technology development of the mission This mission was also to prove to be well under the 150M phase CID cap *The Threat and the Opportunity of Asteroids and Other Near-earth Objects* United States.
