Pediatric Headache Christopher B. Oakley, 2023-01-01. Pediatric headache is the most common neurological complaint that presents to the general pediatrician, urgent care, and emergency rooms, and to pediatric neurology. Despite how common headaches are in the pediatric population and how many children continue to suffer from their headaches on a daily basis, there remains a tremendous disconnect for those tasked with being the first-line providers, general pediatric providers. This stems from the fact that headache patients can be so variable and challenging, with numerous comorbid concerns, all the while requiring an individualized treatment approach without a cure. The purpose of this proposed book is to help foster a better understanding of how to approach, assess, and ultimately treat pediatric headache for the general pediatric provider in an attempt to make what once was a daunting, overwhelming complaint from patients and their families into something each general pediatric

provider can conquer with confidence With the aid of experts in the field of pediatric headache this book will begin by providing the foundation as to what types of headaches primary and secondary as well as their precursors are commonly seen in the pediatric population From there the focus will turn to when should the provider worry about a patient who presents with headaches The clinic visit from the history to the red flags to the pertinent exam will be reviewed in depth to help distinguish between primary and secondary headaches as well as who warrants an evaluation Additionally comorbid concerns will be covered as these may have direct impact on the evaluation and subsequent treatments offered The next section will delve into the treatment of pediatric headache with a comprehensive approach covering everything from lifestyle to complementary and alternative therapies treatments to medications both acute and prophylactic Other more specialized treatment options such as procedures and devices will also be discussed albeit these options are more likely to be offered by a specialist rather than a general provider A subsequent section will highlight the unique challenges for the older adolescent patients as they transition into young adulthood The closing section will highlight the future of pediatric headache
