Handbook on Enterprise Architecture Peter Bernus, Laszlo Nemes, Günter Schmidt, 2012-12-06 This Handbook is about methods tools and examples of how to architect an enterprise through considering all life cycle aspects of Enterprise Entities such as individual enterprises enterprise networks virtual enterprises projects and other complex systems including a mixture of automated and human processes The book is based on ISO15704 2000 or the GERAM Framework Generalised Enterprise Reference Architecture and Methodology that generalises the requirements of Enterprise Reference Architectures Various Architecture Frameworks PERA CIMOSA Grai GIM Zachman C4ISR DoDAF are shown in light of GERAM to allow a deeper understanding of their contributions and therefore their correct and knowledgeable use The handbook addresses a wide variety of audience and covers methods and tools necessary to design or redesign enterprises as well as to structure the implementation into manageable projects

Design of Enterprise Systems Ronald Giachetti, 2016-04-19 In practice many different people with backgrounds in many different disciplines contribute to the design of an enterprise Anyone who makes decisions to change the current enterprise to achieve some preferred structure is considered a designer What is problematic is how to use the knowledge of separate aspects of the enterprise to achieve a globally optimized enterprise The synthesis of knowledge from many disciplines to design an enterprise defines the field of enterprise engineering Because enterprise systems are exceedingly complex encompassing many independent domains of study students must first be taught how to think about

enterprise systems Specifically written for advanced and intermediate courses and modules Design of Enterprise Systems Theory Architecture and Methods takes a system theoretical perspective of the enterprise It describes a systematic approach called the enterprise design method to design the enterprise The design method demonstrates the principles models methods and tools needed to design enterprise systems The author uses the enterprise system design methodology to organize the chapters to mimic the completion of an actual project Thus the book details the enterprise engineering process from initial conceptualization of an enterprise to its final design Pedagogical tools available include For instructors PowerPoint slides for each chapter Project case studies that can be assigned as long term projects to accompany the text Quiz questions for each chapter Business Process Analyzer software available for download For students Templates checklists forms and models to support enterprise engineering activities The book fills a need for greater design content in engineering curricula by describing how to design enterprise systems Inclusion of design is also critical for business students since they must realize the import their decisions may have on the long term design of the enterprises they work with The book s practical focus and project based approach coupled with the pedagogical tools gives students the knowledge and skills they need to lead enterprise engineering projects

The Agile Virtual Enterprise Ted Goranson,1999-09-30 New ways to manage change and to compete in a rapidly changing business world are emerging under the concept of the agile enterprise Agile organizations can be almost any size or type but what distinguishes them from their lumbering traditional business counterparts is the ability to read and to react quickly They can also be virtual meaning they can reconfigure themselves quickly and temporarily in response to a challenge which gives them agility but then dissolve or transmute themselves into something else Goranson explains how they do this and how your own organization can do it too With fascinating case studies and a unique metric Goranson provides answers The result is essential reading for management at almost any level within every type of organization Now that serious management tools are beginning to appear the agile virtual enterprise is no longer just a theoretical possibility it s real In fact although they were never actually described that way virtual organizations can be found throughout history from the whaling companies of the 19th century through the film studios of the 20th Goranson describes many of these businesses and gives us an understanding of how they evolved and why they worked Of special interest is his metric It requires no technical background to be understood and applied yet it digs deeply into the philosophy of strategic management as well as its practicalities Goranson also reports for the first time on the large scale research sponsored by the U S military to advance the state of the art in management science and to create the tools that eventually made the agile virtual enterprise what it is today

Knowledge Sharing in the Integrated Enterprise Peter Bernus,Mark Fox,2006-03-09 Enterprise Architects in their endeavor to achieve Enterprise Integration have limited guidance on how best to use Enterprise Models and Modeling Tools to support their practice It is widely recognized that the practice of engineering enterprises needs a number of models but how to maintain the relation between these models with ease is still a

problem Model interoperability is an issue on multiple counts How to interchange models between enterprise modeling tools How to maintain the interdependencies between models whether they describe the enterprise on the same level but from different points of view or from the same point of view but on different levels of abstraction and granularity How to maintain a coherent and evolving set of enterprise models in support of continuous change processes How to use and reuse enterprise models as a knowledge resource The answers to these questions are of great importance to anyone who is implementing ISO9001 2000 requirements whether through using enterprise architecture practice or not although it can be argued that a well executed architecture practice should satisfy ISO9001 without additional effort This volume attacks the problem on three fronts 1 Authors working in international standardisation and tool development as well as in enterprise modeling research present the latest developments in semantic integration 2 Authors who are practitioners of or conducting active research in enterprise architecting methodologies give an account on the latest developments and strategic directions in architecture frameworks and methodologies 3 Authors who use or develop information integration infrastructures present best practice and future trends of this aspect of enterprise integration Chapters of this book include contributions to the International Conference on Enterprise Integration and Modelling Technology ICEIMT 04 and those presented at the Design of Information Infrastructure Systems for Manufacturing DIISM 04 Workshop While DIISM is traditionally oriented at supporting manufacturing practice the results have a far greater domain of applicability Enterprise Collaboration David M. Levermore, Cheng Hsu, 2006-11-24 Global supply chain is a fact of life in today's world From the perspective of the First World this practice reigns in outsourcing of jobs that in the view of many threatens a way of life This argument actually implies that outsourcing represents a fair chance for the Third World to catch up and reverse leverage through market economy However many in the Third World are also opposed to the global market economy from an opposite argument The fact that matters is of course that globalization continues to progress relentlessly in its own momentum and that the national playing grounds continue to level globally for both Worlds Would globalization results in the rich nations getting richer and the poor poorer or would it help the world united in the same economical reason The questions that we the researchers could try to answer are a different kind the kind that leads to the understanding of the elements of the fittest in the global competition For instance what defines an enterprise's staying power on the top of the food chain or an economy's ability to design and control the global supply chains in the long term Evidently to understand this ability the field needs to study the engineering prowess required as much as the finance and management if the history of industrial revolution is any guide Yet the study on the engineering of global supply chains has been largely lacking *Complex Systems Concurrent Engineering* Geilson Loureiro, Richard Curran, 2007-08-10 This volume features the proceedings of the 14th ISPE Conference on Concurrent Engineering held in São José dos Campos São Paulo Brazil on the 16th 20th of July 2007 It highlights the application of concurrent engineering to the development of complex systems *Proceedings of the 6th CIRP-Sponsored*

International Conference on Digital Enterprise Technology George Q. Huang, K.L. Mak, Paul G. Maropoulos, 2009-12-12 This Proceedings volume contains articles presented at the CIRP Sponsored International Conference on Digital Enterprise Technology DET2009 that takes place December 14-16 2009 in Hong Kong. This is the 6th DET conference in the series and the first to be held in Asia. Professor Paul Maropoulos initiated, hosted, and chaired the 1st International DET Conference held in 2002 at the University of Durham. Since this inaugural first DET conference, the DET conference series has been successfully held in 2004 at Seattle, Washington, USA; in 2006 at Setúbal, Portugal; in 2007 at Bath, England; and in 2008 at Nantes, France. The DET2009 conference continues to bring together international expertise from the academic and industrial fields, pushing forward the boundaries of research knowledge and best practice in digital enterprise technology for design and manufacturing and logistics and supply chain management. Over 120 papers from over 10 countries have been accepted for presentation at DET2009 and inclusion in this Proceedings volume after a stringent refereeing process. On behalf of the organizing and program committees, the Editors are grateful to the many people who have made DET2009 possible: to the authors and presenters, especially the keynote speakers; to those who have diligently reviewed submissions; to members of the International Scientific Committee, Organizing Committee, and Advisory Committee; and to colleagues for their hard work in sorting out all the arrangements. We would also like to extend our gratitude to DET2009 sponsors, co-organizers, and supporting organizations.
