Environment And Sustainable Development:

Women, the Environment and Sustainable Development Rosi Braidotti, International Research and Training Institute for the Advancement of Women, 1994 There is a widespread perception that the development process is in a state of multiple crisis While the notion of sustainable development is supposed to address adequately its environmental dimensions there is still no agreed framework relating women to this new perspective This book is an attempt to present and disentangle the various positions put forward by major actors and to clarify the political and theoretical issues that are at stake in the debates on women the environment and sustainable development Among the current critiques of the western model of development which the authors review are the feminist analysis of Science itself and the power relations inherent in the production of knowledge Women Environment and Development WED Alternative Development Environmental Reformism and Deep Ecology Social Ecology and Ecofeminism In traversing this important landscape of ideas they show how they criticise the dominant developmental model at the various levels of epistemology theory and policy The authors also go further and put forward their own ideas as to the basic elements they consider necessary in constructing a paradigmatic shift emphasising such values as holism mutuality justice autonomy self reliance sustainability and peace This unique work is a signally useful contribution to clarifying thinking on a topic with immense implications for all women Publisher's description

Environment and Sustainable Development M.H. Fulekar, Bhawana Pathak, R K Kale, 2013-10-16 Global society in the 21st century is facing challenges of improving the quality of air water soil and the environment and maintaining the ecological balance Environmental pollution thus has become a major global concern The modern growth of industrialization urbanization modern agricultural development and energy generation has resulted in the indiscriminate exploitation of natural resources for fulfilling human desires and needs which has contributed in disturbing the ecological balance on which the quality of our environment depends Human beings in the truest sense are the product of their environment The man environment relationship indicates that pollution and deterioration of the environment have a social origin The modern technological advancements in chemical processes operations have generated new products resulting in new pollutants in such abundant levels that they are above the self cleaning capacity of the environment One of the major issues in recent times is the threat

to human lives due to the progressive deterioration of the environment from various sources. The impact of the pollutants on the environment will be significant when the accumulated pollutants load will exceed the carrying capacity of the receiving environment. Sustainable development envisages the use of natural resources such as forests, land, water, and fisheries in a sustainable manner without causing changes in our natural world. The Rio de Janeiro Earth Summit held in Brazil in 1992 focused on sustainable development to encourage respect and concern for the use of natural resources in a sustainable manner for the protection of the environment. This book will be beneficial as a source of educational material to post graduate research scholars, teachers, and industrial personnel for maintaining the balance in the use of natural sources for sustainable development.
