**Global Sustainability, Cultural Perspectives and Challenges for Transdisciplinary Integrated Research** Benno Werlen, 2015-05-28 This book offers new perspectives of transdisciplinary research in methodological as well as theoretical respects It provides insights in the two fold bio physical and the socio cultural global embeddedness of local living conditions on the basis of selected empirical studies from Latin America Asia Africa Australia and Europe The theoretical foundations of ecological research and sustainability policies were developed at the end of the nineteenth century They are largely based on investigations of living spaces and the evolution and differentiation of varied life forms This perspective is embedded in the practical and theoretical European problem situations of the past and lacks social and cultural differentiation The transformation of spatial and natural relations as a result of the globalization process is so radical that new theories are needed to solve 21st century ecological problems Moreover in view of the lack of an ontologically sound and promising strategy for transdisciplinary problem solving as well as an acceptable

consideration of the power of cultural schemas relating to natural living s interpretations there is a strong need to focus on sustainable social practices habits and routines rather than on predominantly living spaces or eco topes This book elaborates on the transdisciplinary approach by reflecting on the theoretical heritage and a global perspective of sustainability by focusing on the primary role of a social approach in sustainability research and by putting emphasis on cultural dimension of sustainability It postulates that global sustainability is grounded in a global understanding of our everyday activities

*Facing Global Environmental Change* Hans Günter Brauch,Navnita Chadha Behera,Patricia Kameri-Mbote,John Grin,Úrsula Oswald Spring,Béchir Chourou,Czeslaw Mesjasz,Heinz Krummenacher,2009-06-04 The year 2007 could perhaps accurately be described as the year when climate change finally received the attention that this challenge deserves globally Much of the information and knowledge that was created in this field during the year was the result of the findings of the Fourth sessment Report AR4 of the Intergovernmental Panel on Climate Change IPCC which were disseminated on a large scale and reported extensively by the media This was the result not only of a heightened interest on the part of the public on various aspects of climate change but also because the IPCC itself proactively attempted to spread the findings of its AR4 to the public at large The interest generated on the scientific realities of climate change was further enhanced by the award of the Nobel Peace Prize to the IPCC and former Vice President of the US Al Gore By taking this decision in favour of a leader who has done a great deal to create awareness on c mate change and a body that assesses all scientific aspects of climate change and disseminates the result of its findings the Norwegian Nobel Committee has clearly drawn the link between climate change and peace in the world

Ulanicki,Kalanithy Vairavamoorthy,David Butler,Peter L. M. Bounds,Fayyaz Ali Memon,2020-11-26 Water Management Challenges in Global Change contains the proceedings of the 9th Computing and Control for the Water Industry CCWI2007 and the Sustainable Urban Water Management SUWM2007 conferences The rationale behind these conferences is to improve the management of urban water systems through the development of computerbased methods Issues such as economic globalisation climate changes and water shortages call for a new approach to water systems management which addresses the relevant technical social and economic aspects This collection represents the views of academic and industrial experts from a number of countries who provide technical solutions to current water management problems and present a vision for addressing the global questions The themes underlying many of the contributions include energy and material savings water savings and the integration of different aspects of water management The papers are grouped into three themes covering water distribution systems sustainable urban water management and modelling of wastewater treatment plants The water distribution topics cover asset and information management planning monitoring and control hydraulic modelling of steady state and transients water quality and treatment demand and leakage management optimisation design and decision support systems as well as reliability and security of water distribution systems The sustainable urban water management topics include urban drainage systems water reuse social aspects of water management and also selected facets of water resources and irrigation Computer control of wastewater treatment plants has been seen as less advanced than that

of clean water systems To address this imbalance this book presents a number of modelling techniques developed specifically for these plants Water Management Challenges in Global Change will prove to be invaluable to water and environmental engineering researchers and academics managers engineers and planners and postgraduate students *Climate Change Challenge (3C) and Social-Economic-Ecological Interface-Building* Sunil Nautiyal, Ruediger Schaldach, K V Raju, Harald Kaechele, Bill Pritchard, Kottapalli Sreenivasa Rao, 2016-06-04 This book is the outcome of two International Conferences held at the ISEC in Bangalore India the international conference on Climate Change and Social Ecological Economical Interface Building Modelling Approach to Exploring Potential Adaptation Strategies for Bio resource Conservation and Livelihood Development held during 20-21 May 2015 and jointly organized by the Centre for Ecological Economics and Natural Resources CEENR Institute for Social and Economic Change ISEC and the Centre for Environmental Systems Research CESR University of Kassel Germany and the international conference Climate Change and Food Security the Global and Indian Contexts jointly hosted by the CEENR ISEC and the School of Geosciences University of Sydney on 18-19 February 2015 The selected papers presented in this book portray a broad range of international research efforts aimed at developing a deeper understanding of human environment systems but also at translating scientific knowledge into political and societal solutions and responses to the challenge of climate change

**Managing Water Resources in a Time of Global Change** Alberto Garrido, Ariel Dinar, 2009-01-13 Global change possesses serious challenges for water managers and scientists In mountain areas where water supplies for half of the world population originate climate and hydrologic models are still subject to considerable uncertainty And yet critical decisions have to be taken to ensure adequate and safe water supplies to billions of people millions of farmers and industries without further deteriorating rivers and water bodies While global warming is known to cause glaciers retreat and reduced snow packs around the world it is not clear that mountain discharge will be lower What is widely recognised is that water management must be adapted to accommodate significant regime changes However this inevitably involves managing transboundary rivers adding further complexity to putting principles in practice This book takes global warming and the importance of mountain areas in world water resources as the starting point First it provides detailed reviews of the processes going on in several rivers systems and world regions in Europe Rhine and Ebro North America Canadian Rockies Western US and Mexico the Middle East Jordan Africa Tunisia Kenya and South Africa These contexts provide case studies and examples that show the difficulties and potential for adaptation to global change Land use economics numerous modeling approaches are some of the cross cutting issues covered in the chapters The volume also includes the views of water practitioners with two chapters authored by members of the US Canada International Joint Commission an industrialist from Western Canada and an environmental leader in Spain By combining a rich set of contexts and approaches the volume succeeds in offering a view of the global challenges faced by water agencies international donors and researchers around the world A case is made in some chapters to seek adaptive strategies rather than trying to reduce

or control resources variability This requires factoring in land use social and economic aspects especially in developing countries Another conclusion is that complex problems can and must be posed and negotiated with the help of models mapping techniques and science based facts However complex these may be there are ways to translate them to easily interpretable and visualisations of alternative scenarios and courses of action This book provides numerous examples of the potential of such approaches to draft environmental programmes solve transboundary disputes and reduce the economic consequences of droughts and climate instability

**China: Tackle the Challenge of Global Climate Change** Angang Hu, Qingyou Guan, 2017-05-18 Global climate change is one of the challenges ever to confront humanity with the largest scale widest scope and most far reaching influence As the biggest developing country with the largest population China is the world's leading consumer of coal and energy and one of the worst hit victims of global warming Consequently China should assume its responsibility in making contributions to global sustainable development Based on the principles of fairness and efficiency this study creatively puts forward two principles of global governance on climate change The first entails replacement of the two group schema of developed and developing countries with a four group model based on the Human Development Index HDI The second entails application of the resulting model to specify the major emitters as principal contributors to emission reduction In addition it proposes a two step strategy for China to tackle the issue of climate change This book makes it clear that China should proactively engage in relevant international cooperation actively participate in international climate negotiations make clear commitments to reduce emissions and assume the obligations of a responsible power to achieve sustainable and green development

Global Change and Local Places Association of American Geographers GCLP Research Team, 2003-06-26 This comprehensive book explores the ways people and biota contribute to climate change in four localities of the United States This volume summarizes the findings of the Global Change in Local Places GCLP project initiated by the Association of American Geographers to investigate the contribution of local factors to global change how and why these factors change over time and how the effects might be controlled and mitigated locally The sources and driving forces for greenhouse gas emissions vary widely among the four research sites as do the possibilities and propensities to mitigate emissions and adapt to the local changes global warming could bring Policy makers and legislators will be unable to address human induced climate change effectively without the insights revealed by examining and understanding the daily routines that are simultaneously the sources of climate change and the keys to reducing its severity and coping with its effects
