Topics in Environmental Economics M. Boman, Runar Brännlund, Bengt Kriström, 2013-03-14. This book shows we believe the breadth and the complexity of issues that economists now tackle in their analysis of the connections between the ecosystem and the economic system. The book offers contributions to such disparate issues as the value of preserving the wolf in Sweden and the proper distribution of permits in an effective global warming treaty. Because these questions remain at the fore front of important resource allocation problems that need to be confronted, it is only appropriate that they are represented in a book that intends to paint a picture, albeit certainly incomplete, of the vibrant and progressing state of environmental economics. The contributions cover five areas of environmental economics: policy instruments, cost-benefit analysis, cost efficiency, contingent valuation, and experimental economics. Each area is worthy of a book by itself, but here we have made a point of focusing on problems that seem directly applicable to the pressing policy issues of today. Thus the contributors address topics that are directly relevant to international and regional policy making as well as those that are linked to development of supporting information systems, e.g. resource accounting. In addition, the contributions seek to provide high-level applications of measurement techniques as well as pertinent critiques of these methods. The next section provides a summary overview of the book.

Environmental Policy Instruments for Conserving Global Biodiversity Oliver Deke, 2008-03-29. If you can believe all things are possible to him who believes Mark 9:23. The current unprecedented loss of global biodiversity as a result of anthropogenic interference in the world's ecosystems is affecting human well-being across the globe with increasing severity. It therefore represents a major challenge in international environmental policymaking. With the Convention on Biological Diversity (CBD), the community of states has recognized the increasing importance of preserving biodiversity. Given the extensive context of biodiversity loss and preservation, this study focuses on two issues which are at the center of the public discussion regarding the objectives of conservation and the sustainable use of biodiversity and that

are addressed by specific policy instruments The first issue is the regulation of cross border trade in genetic information and genetic resources Here the question is whether the commercial use of genetic information derived from bio diversity can create incentives for its preservation The second issue involves the conservation of biodiversity through the protection of ecologically valuable eco systems from human use Here the question is how the protection of these natu ral areas and the consequent restriction of destructive human use can be organized effectively on an international level I am very grateful to Professor Horst Siebert for offering valuable advice and support I also am indebted to Professor Till Requate for his helpful ideas and encouragement
