Olmstead, Valerie A. Kuhlmeier, 2015-01-15 Integrating developments from psychology ethology and neuroscience this is an undergraduate introduction to cognitive processes across species The authors merge classic studies and contemporary research to give students a full picture of the evolving field of comparative cognition Engaging students in the discipline from its roots in animal learning and evolutionary biology through to current research the chapters cover both controlled laboratory and comparative cross species studies in the natural environment This approach provides students with complementary ethological and neurobiological perspectives on cognition Feature boxes encourage active and engaged learning giving a deeper understanding of topics discussed in the main text These are supported by end of chapter questions to check understanding and encourage wider thinking around topics Online resources include solutions to questions in the book advanced material PowerPoint lecture slides and additional questions all available at www.cambridge.org/cognition The Wiley Handbook on the Cognitive Neuroscience of Learning Robin A. Murphy, Robert C. Honey, 2016-05-26 The Wiley

Handbook on the Cognitive Neuroscience of Learning charts the evolution of associative analysis and the neuroscientific study of behavior as parallel approaches to understanding how the brain learns that both challenge and inform each other. Covers a broad range of topics while maintaining an overarching integrative approach. Includes contributions from leading authorities in the fields of cognitive neuroscience, associative learning and behavioral psychology. Extends beyond the psychological study of learning to incorporate coverage of the latest developments in neuroscientific research. The Oxford Handbook of Comparative Cognition Thomas R. Zentall, Edward A. Wasserman, 2012-03-20. In the past decade the field of comparative cognition has grown and thrived. No less rigorous than purely behavioristic investigations, examinations of animal intelligence are useful for scientists and psychologists alike in their quest to understand the nature and mechanisms of intelligence. Extensive field research of various species has yielded exciting new areas of research integrating findings from psychology, behavioral ecology and ethology in a unique and wide ranging synthesis of theory and research on animal cognition. The Oxford Handbook of Comparative Cognition contains sections on perception and illusion, attention and search, memory processes, spatial cognition, conceptualization and categorization, problem solving and behavioral flexibility, and social cognition processes including findings in primate tool usage, pattern learning and counting. The authors have incorporated findings and theoretical approaches that reflect the current state of the field. This comprehensive volume will be a must read for students and scientists who want to know about the state of the art of the modern science of comparative cognition.

Avian Cognition Carel ten Cate, Susan D. Healy, 2017-06-22. The cognitive abilities of birds are remarkable. Hummingbirds integrate spatial and temporal information about food sources, day old chicks have a sense of numbers, parrots can make and use tools and ravens have sophisticated insights in social relationships. This volume describes the full range of avian cognitive abilities, the mechanisms behind such abilities and how they relate to the ecology of the species. Synthesising the latest research in avian cognition, a range of experts in the field provide first hand insights into experimental procedures, outcomes and theoretical advances including a discussion of how the findings in birds relate to the cognitive abilities of other species including humans. The authors cover a range of topics such as spatial cognition, social learning, tool use, perceptual categorization and concept learning, providing the broader context for students and researchers interested in the current state of avian cognition research, its key questions and appropriate experimental approaches. **Rendering Techniques**

2001 S.J. Gortler, K. Myzskowski, 2012-12-06. This book contains the proceedings of the 11th Eurographics Workshop on Rendering, which took place from the 25 to the 27th of June 2001 in London, United Kingdom. Over the past 11 years the workshop has become the premier forum dedicated to research in rendering. Much of the work in rendering now appearing in other conferences and journals builds on ideas originally presented at the workshop. This year we received a total of 74 submissions. Each paper was carefully reviewed by two of the 28 international programme committee members as well as external reviewers selected by the co chairs from a pool of 125 individuals. In this review process all submissions and reviews

were handled electronically with the exception of videos submitted with a few of the papers The overall quality of the submissions was exceptionally high Space and time constraints forced the committee to make some difficult decisions In the end 29 by papers were accepted and they appear here Almost all papers are accompanied color images which appear at the end of the book The papers treat the following varied topics methods for local and global illumination techniques for acquisition and modeling from images image based rendering new image representations hardware assisted methods shadow algorithms visibility perception texturing and filtering Each year in addition to the reviewed contributions the workshop includes invited presentations from internationally recognized experts

Urban Experience and Design Justin B.

Hollander,Ann Sussman,2020-10-15 Embracing a biological and evolutionary perspective to explain the human experience of place Urban Experience and Design explores how cognitive science and biometric tools provide an evidence based foundation for architecture and planning Aiming to promote the creation of a healthier and happier public realm this book describes how unconscious responses to stimuli outside our conscious awareness direct our experience of the built environment and govern human behavior in our surroundings This collection contains 15 chapters including contributions from researchers in the US the UK the Netherlands France and Iran Addressing topics such as the impact of eye tracking analysis and seeing beauty and empathy within buildings Urban Experience and Design encourages us to reframe our understanding of design including the narrative of how modern architecture and planning came to be in the first place This volume invites students academics and scholars to see how cognitive science and biometric findings give us remarkable 21st century metrics for evaluating and improving designs even before they are built

The Geometry of Environment Lionel March,Philip Steadman,2020-10-31 Originally published in 1971 The Geometry of Environment is a fusion of art and mathematics introducing stimulating ideas from modern geometry using illustrations from architecture and design The revolution in the teaching of mathematics and the advent of the computer in design challenge traditional ways of appreciating the space about us and expand the structural understanding of our

surroundings through such concepts as transformations symmetry groups sets and graphs This book aims to show the relevance of new maths and encourages exploration of the widening intellectual horizons of environmental design and architecture

Graph Vision Theodora Vardouli, 2024-11-12 How a protean mathematical object the graph ushered in new images tools and infrastructures for design and catalyzed a digital future for architecture In *Graph Vision* Theodora Vardouli offers a fresh history of architecture's early entanglements with modern mathematics and digital computing by focusing on a hidden protagonist the graph Fueled by iconoclastic sentiments and skepticism of geometric depiction architects she explains turned to the skeletal underpinnings of their work and with it the graph as a site of representation operation and political possibility Taking the reader on an enthralling journey through a polyvalent mathematical entity Vardouli combines close readings of graphs architectural manifestations as images tools and infrastructures for design with original archival work on research centers that spearheaded mathematical and computational approaches to architecture Structured thematically *Graph Vision* weaves together archival findings on influential research groups such as the Land Use Built Form Studies Center at the University of Cambridge the Center for Environmental Structure at Berkeley the Architecture Machine Group at the Massachusetts Institute of Technology among others as well as important figures who led or worked in proximity to these

groups including Lionel March Christopher Alexander and Yona Friedman Together this material chronicles the emergence of both a new way of seeing and a new prospect for the discipline that prefigured its digital future of a graph vision Vardoulis argues that this vision was one of vacillation toward visual appearance Digital approaches to architecture she ultimately reveals were founded on a profound ambivalence toward the visual realm endemic to mid twentieth century architectural and mathematical modernisms

Expanding Boundaries: Systems Thinking in the Built Environment Guillaume Habert, Arno Schlueter, 2016-08-15 Consuming over 40% of total primary energy the built environment is in the centre of worldwide strategies and measures towards a more sustainable future To provide resilient solutions a simple optimisation of individual technologies will not be sufficient In contrast whole system thinking reveals and exploits connections between parts Each system interacts with others on different scales materials components buildings cities and domains ecology economy and social Whole system designers optimize the performance of such systems by understanding interconnections and identifying synergies The more complete the design integration the better the result In this book the reader will find the proceedings of the 2016 Sustainable Built Environment SBE Regional Conference in Zurich Papers have been written by academics and practitioners from all continents to bring forth the latest understanding on systems thinking in the built environment

The CA3 Region of the Hippocampus: How is it? What is it for? How does it do it? Enrico Cherubini, Richard Miles, 2015-08-19 The CA3 hippocampal region receives information from the entorhinal cortex either directly from the perforant path or indirectly from the dentate gyrus via the mossy fibers MFs According to their specific targets principal mossy cells or interneurons MFs terminate with large boutons or small filopodial extensions respectively MF CA3 synapses are characterized by a low probability of release and pronounced frequency dependent facilitation In addition MF terminals are endowed with mGluRs that regulate their own release We will describe the intrinsic membrane properties of pyramidal cells which can sometimes fire in bursts together with the geometry of their dendritic arborization The single layer of pyramidal cells is quite distinct from the six layered neocortical arrangement The resulting aligned dendrites provides the substrate for laminated excitatory inputs They also underlie a precise diversity of inhibitory control which we will also describe in detail The CA3 region has an especially rich internal connectivity with recurrent excitatory and inhibitory loops In recent years both in vivo and in vitro studies have allowed to better understand functional properties of the CA3 auto associative network and its role in information processing This circuit is implicated in encoding spatial representations and episodic memories It generates physiological population synchronies including gamma theta and sharp waves that are presumed to associate firing in selected assemblies of cells in different behavioral conditions

The CA3 region is susceptible to neurodegeneration during aging and after stresses such as infection or injury. Loss of some CA3 neurones has striking effects on mossy fiber inputs and can facilitate the generation of pathologic synchrony within the CA3 micro circuit. The aim of this special topic is to bring together experts on the cellular and molecular mechanisms regulating the wiring properties of the CA3 hippocampal microcircuit in both physiological and pathological conditions, synaptic plasticity, behavior and cognition. We will particularly emphasize the dual glutamatergic and GABAergic phenotype of MF CA3 synapses at early developmental stages and the steps that regulate the integration of newly generated neurons into the adult dentate gyrus CA3 circuit.
