GIS and Environmental Modeling Michael F. Goodchild, Louis T. Steyaert, Bradley O. Parks, Carol Johnston, David Maidment, Michael Crane, Sandi Glendinning, 1996-09-30 GIS and Environmental Modeling Progress and Research Issues Michael F Goodchild Louis T Steyaert Bradley O Parks Carol Johnston David Maidment Michael Crane and Sandi Glendinning Editors With growing pressure on natural resources and landscapes there is an increasing need to predict the consequences of any changes to the environment Modelling plays an important role in this by helping our understanding of the environment and by forecasting likely impacts In recent years moves have been made to link models to Geographical Information Systems to provide a means of analysing changes over an area as well as over time GIS and Environmental Modeling explores the progress made to date in integrating these two software systems Approaches to the subject are made from theoretical technical as well as data stand points The existing capabilities of current systems are described along with important issues of data availability accuracy and error Various case studies illustrate this and highlight the common concepts and issues that exist between researchers in different environmental fields The future needs and prospects for integrating GIS and environmental models are also explored with developments in both data handling and modelling discussed The book brings together the knowledge and experience of over 100 researchers from academic commercial and government backgrounds who work in a wide range of disciplines The themes followed in the text provide a fund of knowledge and guidance for those involved in environmental modelling and GIS The book is easily accessible for readers with a basic GIS knowledge and the ideas and results of the research are clearly illustrated with both colour and black and white graphics

Modelling with GIS and Remote Sensing Andrew Skidmore,2003-09-02 Most government agencies and private companies are investing significant resources in the production and use of geographical data The capabilities of Geographical Information Systems GIS for data analysis are also improving to the extent that the potential performance of GIS software and the data available for analysis outstrip the abilities of managers and analysts to use and analyze the information This is especially true for environmental applications Here the need to keep up to date is essential for providing effective and efficient services Environmental Modeling with GIS and Remote Sensing derives from a training course run by ITC for professionals and managers in the environmental sciences detailing the applications of remote sensing and GIS for environmental modeling and assessment It sets out the current research results and provides operational methods for environmental mapping and monitoring

GIS, Environmental Modeling and Engineering, Second Edition Allan Brimicombe,2009-12-23 Spatial dimensions need to be properly captured if modeling and engineering techniques are to be successfully applied in addressing environmental problems The links between the geographical information systems GIS that capture this data simulation modeling and engineering offer tremendous possibilities for building versatile support systems for managing the environment GIS Environmental Modeling and Engineering focuses on using GIS and external models to solve real environmental problems promoting the critical thinking needed for the effective applications of these systems and their analytical outputs Divided into three major sections this textbook first concentrates on defining GIS identifying how data is structured and explaining common functionality The text examines GIS from a technological perspective exploring the evolution of its scientific basis and its synergies with other technologies within a geocomputational paradigm The next section explores modeling from a neutral scientific perspective in its role of simulating phenomena as well as from a more specific perspective in its role within environmental science and engineering The third and largest section looks at how GIS and simulation modeling are joined It provides case studies and covers issues such as interoperability data quality model validity space time dynamics and decision support systems This volume provides seniors and postgraduate students with a structured coherent text that goes beyond introductory subject

matter by enabling readers to think critically about the data acquisition process and the results they get from the technology
