Environmental Issues in Chemical Perspective Thomas G. Spiro, William M. Stigliani, 1980-06-30 An in depth presentation of the chemistry required to evaluate the choices we must make regarding our environment this study has four parts energy the atmosphere the hydrosphere and the biosphere Each part is followed by problem sets that require the application of chemical principles to such issues as dwindling natural gas and petroleum resources fission and fusion as energy sources CO₂ build up and the greenhouse effect automobile emission control acid rain eutrophication of lakes lead mercury and cadmium poisoning and environmental links to cancer An answer manual for the problems is included Social political and economic concerns are also covered The authors show how chemists and non chemist decision makers can take account of each other s perspectives

Environmental Chemistry: Chemistry Of Major Environmental Cycles Teh Fu Yen, 2005-07-08 The environment is an invaluable resource and understanding its chemistry is essential to the continued sustainability of life on earth Environmental science which builds on the foundation of chemistry seeks to remedy the present deterioration and degradation caused by humans and to create new technology that will prevent further damage This book deals comprehensively with the five essential global cycles or envirospheres lithosphere minerals and energy sources atmosphere air hydrosphere water pedosphere soil and biosphere life and provides a clear overview of the crucial interaction away them It covers the chemistry of energy resources and aspects of biochemistry geochemistry and toxicological chemistry in addition to the three important areas of air water and soil in the process it links chemical principles with environmental issues With the fundamental principles presented clearly and the topics covered in a logical sequence this book can be used as a textbook of environmental chemistry for the environmental engineering or environmental science major It can also be used as a reference book for environmental professionals a

Evolutionary Perspectives on Environmental Problems Dustin J. Penn, Iver Myrnes, The twenty first century presents an increasing number of environmental problems including toxic pollution global warming destruction of tropical forests extinction of biological diversity and depletion of natural resources These environmental problems are generally due to human behavior namely over consumption of resources and overpopulation Designing effective policies to address these problems requires a deep understanding of human behavior as well as ecology This in turn requires considerations of human nature and the evolutionary design of the human mind Evolutionary research on human behavior has profound implications for the environmental sciences The aim of this collection is to bring together a variety of chapters that show how and why Part 1 Human Nature and Resource Conservation addresses environmental problems from different evolutionary perspectives Part 2 The Ecological Noble Savage Hypothesis examines the notion that our environmental problems are due to Western culture and that our ancestors and people in indigenous societies lived in harmony with nature until the corrupting influences of Western culture Part 3 The Tragedy of the Commons explores the conservation of common

pool or open access natural resources such as fisheries forests grazing lands freshwater and clean air Part 4 The Evolution of Discounting and Conspicuous Consumption looks at the problem of explaining why people are so ecologically short sighted and why people in developed countries consume so many resources Part 5 Overpopulation and Fertility Declines addresses the evolution of human reproductive decisions Part 6 Biophilia aims to explain why people cherish nature as well as destroy it The goal of this volume is to introduce environmental thinkers to evolutionary perspectives on human behavior and the new interdisciplinary sciences of evolutionary psychology and behavioral ecology This reader aims to help bridge the artificial division between the biological and social sciences and provide a synthesis between evolutionary sciences of human behavior and environmental sciences Dustin J Penn is director Konrad Lorenz Institute Austrian Academy of Sciences Vienna Iver Myrnes is biologist and researcher at the Department of Biology University of Oslo Norway
