Environmental Pollutants Selected Analytical Methods:

Environmental Pollutants—Selected Analytical Methods Sam Stuart, 2013-10-22 *Environmental Pollutants Selected Analytical Methods* SCOPE6 presents a number of carefully chosen analytical methods for use in the determination of trace amounts of certain substances in the environment This compilation is prepared by the Scientific Committee on Problems of the Environment SCOPE an international council of scientists who provide advice with respect to environmental problems The book contains a wide variety of methods in the determination of chemical elements and compounds in various segments of the environment in air water soil and biota The methods described in the compendium include Atomic Absorption Spectrophotometry in the determination of airborne particulate lead cadmium cobalt and vanadium The use of the Ring Oven Technique in the determination of airborne particulate zinc nickel and copper is discussed The determination of mercury in the air water and biological media is also elucidated The book will be of great use to chemists ecologists biologists and researchers concerned with environmental pollution monitoring Environmental Pollutants International Council of Scientific Unions.
