Airborne Radioactive Contamination in Inhabited Areas, 2009-08-14 For many decades investigations of the behaviour and implications of radioactive contamination in the environment have focused on agricultural areas and food production This was due to the erroneous assumption that the consequences of credible contaminating incidents would be restricted to rural areas However due to the Chernobyl accident more than 250 000 persons were removed from their homes demonstrating a great need for knowledge and instruments that could be applied to minimise the manifold adverse consequences of contamination in inhabited areas Also today the world is facing a number of new threats including radiological terrorism which would be likely to take place in a city where most people would become directly affected A recent report from the US Commission on the Prevention of Weapons of Mass Destruction Proliferation and Terrorism concludes that it is most likely that a large radiological or even nuclear terror attack on a major city somewhere in the world will occur before 2013 For the first time ever the specific problems of airborne radioactive contamination in inhabited areas are treated in a holistically covering treatise pinpointing factorial interdependencies and describing instruments for mitigation The state of the art knowledge is here explained in Airborne Radioactive Contamination in Inhabited Areas y leading scientists in the various disciplines of relevance Unique holistic description of airborne radioactive contamination of inhabited areas and its consequences State of the art information on problems associated with both accidental and malicious contamination events in particularly dirty bombs Detailed description of processes and parameters governing the severity of contaminating incidents Written by key experts in the world

The Precautionary Principle in Marine Environmental Law Bénédicte Sage-Fuller, 2013-07-18 The book examines whether the jurisdiction of coastal States under international law can be extended to include powers of intervention towards vessels posing a significant risk to their coastal and marine environment but which have not yet been involved in any incident or accident The books sets out how it is that coastal State jurisdiction can indeed be seen as including powers of intervention towards High Risks Vessels before an incident or accident happens on the basis of the precautionary principle The precautionary principle requires taking action when a risk of damage to the environment is

suspected but cannot be confirmed scientifically The book thus considers the potential opportunities for the coastal state under international law to regulate international shipping where they consider vessels to an unacceptable risk to the environment in order to prevent or minimise the risk of occurrence of the accident or incident leading to damage The book acknowledges that this puts into question some very old and established principles of the law of the sea most importantly the principle of freedom of navigation But B n dicte Sage Fuller contends that this change would itself be a consequence of the evolution since the end of WWII of on the one hand international law of the sea itself and of international environmental law on the other hand
