McCunn,2025-04-08 This book explores the interdisciplinary pathways that leading environmental psychologists have taken to become educators researchers consultants and professionals in this highly applied and growing field Environmental psychology examines the transactions between people and the built and natural settings in which they inhabit Despite this broad scope few direct avenues to careers in environmental psychology exist and students must forge varied and individualized routes to becoming scholars and practitioners in this important area of study The aim of the book is to serve as

an inspiring supplemental resource for students who wish to know more about how leading thinkers established themselves as environmental psychologists. In each chapter the author describes their inspirations, decisions about undergraduate and graduate courses, particular schools and professional connections that have made a difference to their careers in environmental psychology. Many undergraduate students are disappointed with the lack of a clear path to becoming an environmental psychologist. A strong need exists for a resource like this book for students and for others who may be looking to add to their careers to understand how to gain experience and credentials in the field in different ways. Readers may also be bolstered in their attitude about choosing a niche field like environmental psychology and decide to stick with it if they read the success stories published in this book by leading thinkers who have taken varied and atypical approaches to becoming a professional environmental psychologist. The book's chapters are organized in a manner that shows readers how one may come from many different backgrounds and integrate environmental psychology into their education or professional realm. Part I contains chapters in which authors write about how they approached environmental psychology from architecture, urban planning and geography, while Part II includes chapters from authors who found environmental psychology via cognitive psychology, clinical practice and neuroscience. Part III has chapters from authors writing from the health sciences and social ecology, while Part IV contains chapters by authors inspired to become environmental psychologists through a general appreciation of nature and eco-conscious living in a variety of settings. Those who find a way to make environmental psychology part of their career are often very passionate individuals who are keen to describe their pathway to doing what they love with the hope that others will follow. This book is likely to advance that outcome.

Social Assessment in Natural Resource Management Institutions Nick Taylor, Marcus Benjamin Lane, 2001. This book is the first significant international attempt to outline and analyze how social assessment has been integrated within natural resource management institutions to date. In doing so it focuses on contemporary Australian and New Zealand experiences and relates these back to the international context. Social Assessment in Natural Resource Management Institutions provides practical guidance for a wide range of planners, managers and stakeholders striving for better integration of social issues. The lessons derived are equally relevant to national, provincial, regional and local governance structures, international agencies, corporations and community-based non-government organizations.

Environmental Psychology Linda Steg, Agnes E. van den Berg, Judith I. M. de Groot, 2012-04-09.
