Entropy And Information Optics:

Entropy and Information Optics Francis T.S. Yu, 2017-11-28 This book shows there is a profound connection between information and entropy Without this connection information would be more difficult to apply to science This book covers the connection and the application to modern optics and radar imaging It shows that there exists a profound relationship between Einstein's relativity theory and Schrödinger's quantum mechanics by means of the uncertainty principle In due of the uncertainty relation this book shows that every bit of information takes time and energy to transfer to create and to observe The new edition contains 3 new chapters on radar imaging with optics science in the myth of information and time and the enigma of space *Entropy and Information Optics* Francis T.S. Yu, 2000-03-17 Identifies the relationship between entropy and information optics as the impetus for the research and development of high speed high data rate and high capacity communication systems Examines computing pattern recognition and wavelet transformation

Origin of Temporal ($t > 0$) Universe

Francis T.S. Yu, 2019-11-19 The essence of temporal universe creation is that any analytical solution has to comply with the boundary condition of our universe dimensionality and causality constraints The essence of this book is to show that everything has a price within our temporal $t > 0$ universe energy and time In mathematics every postulation needs proof there exists a solution before searching for the solution Yet science does not have seem to have a criterion as mathematics does to prove first that a postulated science exists within our temporal universe Without such a criterion fictitious science emerges as already have been happening in every day s event In this book the author has shown there exists a criterion for a postulated science whether or not it is existed within our universe The author started this book from Einstein s relativity to the creation of our temporal universe He has shown that every subspace within our universe is created by energy and time in which subspace and time are coexisted The important aspect is that every science has to satisfy the boundary condition of our universe causality and dimensionality Following up with temporal universe the author has shown a profound relationship with the second law of thermodynamics He examines the relationship between entropy with science as well as communication with quantum limited subspace throughout the book The author discusses the paradox of Schrödinger s Cat which has been debated by Einstein Bohr Schrödinger and many others since 1935 that triggered his discovering that Schrödinger s quantum mechanics is a timeless machine in which he has disproved the fundamental principle of superposition within our universe Since quantum mechanics is a virtual mathematics he has shown that a temporal quantum machine can in principle be built on the top of a temporal platform This book is intended for cosmologists particle physicists astrophysicists quantum physicists computer scientists engineers professors and students as a reference and research oriented book

Adaptive Optics Engineering Handbook Robert Tyson, 1999-11-10 This handbook supplies analytical tools for the design and development of adaptive optics systems to enhance their ability to adjust for atmospheric turbulence optical fabrication errors thermally induced distortions and laser device aberrations It provides recommendations for selecting testing and installing a wavefront compensation system **The Nature of Temporal ($t > 0$) Science** Francis T.S. Yu, 2022-04-25 The author has shown that practically all our laws principles and theories are not physically realizable since they were derived from an empty space paradigm From which this book is started with the origin of our temporal $t = 0$ universe it shows that temporal subspace is a physically realizable space within our universe As in contrasted with generally accepted paradigm where time is an independent variable From which the author has shown that it is not how rigorous mathematics is but it is the temporal $t = 0$ space paradigm determines the physically realizable solution Although Einstein's relativity and Schrödinger's principle had revolutionized the modern science this book has shown that both theory and principle are physically non realizable since they were developed from an empty space paradigm One of the most important contribution of this book must be the revolutionary idea of our temporal $t = 0$ space for which the author has shown that absolute certainty exists only at the present $t = 0$ moment Where past time information has no physical substance and future time represents a physically realizable yet uncertainty From which the author has shown that all the existent laws principles and theories were based on past time certainties to predict the future but science is supposed to be approximated The author has also shown that this is precisely our theoretical science was developed But time independent laws and principles are not existed within our temporal universe in view of the author's temporal exclusive principle By which the author has noted that timeless science has already created a worldwide conspiracy for examples such as superposition principle qubit information relativity theory wormhole travelling and many others This book has also shown that Heisenberg's uncertainty is an observational principle independent

with time yet within our universe everything changes with time In this book the author has also noted that micro space behaviors the same as macro space regardless of the particle size Finally one of interesting feature is that that big bang creation was ignited by a self induced gravitational force instead by time as commonly believed Nevertheless everything has a price to pay a section of time t and an amount of energy E and it is not free The author has also shown that time is the only variable that cannot be changed Although we can squeeze a section of time t as small as we wish but we can never able to squeeze t to zero even we have all the needed energy Nevertheless this revolutionary book closer to the truth is highly recommended to every scientist and engineer otherwise we will forever be trapped within the timeless fantasyland of science This book is intended for cosmologists particle physicists astrophysicists quantum physicists computer scientists optical scientists communication engineers professors and students as a reference or a research oriented book **Engineering**
