Environmental Effects on Molecular Structure and Properties Bernard Pullman, 1976 Proceedings of the Eighth Jerusalem Symposium on Quantum Chemistry and Biochemistry held in Jerusalem Israel April 7-11 1975 **Environmental Effects on Molecular Structure and Properties** A. Pullman, 2012-12-06 The holding of the 8th Jerusalem Symposium was saddened by the sudden death of Professor Ernst D Bergmann at the very eve of this meeting With him disappeared one of the leading world scientists in the field of physical chemistry and biochemistry His innumerable friends and admirers over the whole world mourn him profoundly All those who knew him personally and among them the participants in the previous Jerusalem Symposia will remember for ever the exceptional qualities of the scientist and the unusual human warmth of the man With Ernst D Bergmann the state of Israel lost one of the founders of its Science and one of its most brilliant and renowned representatives The spirit which he succeeded to inoculate into his numerous disciples and pupils will however continue to perpetuate his name and his work The Jerusalem Symposia will continue as a living testimony to his brilliant inspiration Before dying Professor Bergmann has prepared a few opening remarks for the 8th Jerusalem Symposium They are reproduced here BERNARD PULLMAN OPENING WORDS Prepared by the Late Professor Ernst David Bergmann It gives me great pleasure to welcome you all on behalf of the President and the Rector of the Hebrew University which is co sponsoring this meeting and of the President and Council of the Israel Academy of Sciences and Humanities which for the eighth time has put its premises at our disposal *Environmental Effects on Molecular Structure and Properties* Bernard Pullman, 1976

Environmental Effects on Molecular Structure and Properties Bernard Pullman, *Intramolecular Dynamics* Joshua Jortner, A. Pullman, 2012-12-06 The Fifteenth Jerusalem Symposium reflected the high standards of the former international scientific meetings which convene once a year at the Israel Academy of Sciences and Humanities in Jerusalem to discuss a specific topic in the broad area of quantum chemistry and biochemistry The topic at this year's Jerusalem Symposium was intramolecular dynamics a subject of central interest for theoreticians chemists and biologists During the last two decades there has been remarkable progress in our understanding of time dependent phenomena The development and application of the modern techniques of quantum mechanics and statistical mechanics to excited state dynamics and to chemical and biophysical systems constitutes a fast developing current research area The main theme of the Symposium was built around a conceptual framework for the elucidation of photophysical and photochemical phenomena in atoms molecules van der Waals complexes and clusters condensed phases polymers and biological supermolecules The interdisciplinary nature of this research field was deliberated by intensive and extensive interactions between scientists from different disciplines and between theory and experiment This volume provides a record of the invited lectures at the Symposium

Pullman, Paul O.P. Ts'O, Edward L. Schneider, 2012-12-06

In 1980 a distinguished group of scientists gathered in Washington D C for an International Symposium on Aging and Cancer Among the recommendations of this Symposium was to convene a future meeting to discuss the molecular basis for Interrelationships between aging and cancer when the appropriate scientific knowledge was available That same year the 13th Jerusalem Symposium on Quantum Chemistry and Biochemistry entitled Carcinogenesis Fundamental Mechanisms and Environmental Effects was held attended by some 50 International authorities In this field At this meeting It became clear that the fundamental process of carcinogenesis is intimately associated with differentiation which must also be mechanistically related to aging It was therefore proposed that the next Jerusalem Symposium on Cancer could provide the appropriate forum for the study on the Interrelationship among cancer aging and differentiation The impressive advances in our knowledge of the nature of the genome through molecular genetic and physical chemical techniques have now provided the opportunity to examine the Interrelationships between these complex biological processes Through the isolation cloning and rearranging of genes we are able to dissect and manipulate the genome in a fashion that was unanticipated only a decade ago At the same time the increase in longevity and the increased numbers of individuals entering the last decades of life where cancer incidences are highest raise the profound and practical question of whether aging and cancer are linked through common mechanisms Nucleic Acids: The Vectors of Life A. Pullman, Joshua Jortner, 2012-12-06 Proceedings of the Sixteenth Jerusalem Symposium on Quantum Chemistry and Biochemistry held in Jerusalem Israel May 2 5 1983 Metal-Ligand Interactions in Organic Chemistry and Biochemistry A. Pullman, N. Goldblum, 2012-12-06

The 9th Jerusalem Symposium was dedicated to the memory of Professor Ernst David Bergmann An imposing and deeply moving memorial session chaired by Professor Ephraim Katzir the President of the State of Israel and a close friend of Professor Bergmann preceded the Symposium itself During this session Professor Bergmann's personal scientific achievements and contributions to the development of his country were described and praised besides President Katzir by Professor A. Dvoretzky President of the Israel Academy of Sciences and Humanities Professor D. Ginsburg Dean of the Israel Institute of Technology in Haifa and the author of these lines May I just quote short extracts from these speeches President Katzir As we open this ninth in the series of symposia initiated in 1967 it is difficult for me as I am sure

for many of Ernst Bergmann's friends, co-workers and students to be here without him. He was not only a great scientist and a beloved teacher; he was one of the most important founders of science in this country. To him we owe many institutes and the establishment here of many branches of science. Professor Dvoretzky, Ernst Bergmann's greatness did not stem from one component overshadowing all the others. It was a multifaceted greatness consisting of the harmonious coalescing of seemingly contrasting entities into a wonderful unity.

Reaction Dynamics in Clusters and Condensed Phases Joshua Jortner, R.D. Levine, A. Pullman, 2012-12-06. The Twenty Sixth Jerusalem Symposium reflected the high standards of these distinguished scientific meetings which convene once a year at the Israel Academy of Sciences and Humanities in Jerusalem to discuss a specific topic in the broad area of quantum chemistry and biochemistry. The topic at this year's Jerusalem Symposium was reaction dynamics in clusters and condensed phases which constitutes a truly interdisciplinary subject of central interest in the areas of chemical dynamics, kinetics, photochemistry and condensed matter chemical physics. The main theme of the Symposium was built around the exploration of the interrelationship between the dynamics in large finite clusters and in infinite bulk systems. The main issues addressed microscopic and macroscopic solvation phenomena, cluster and bulk spectroscopy, photodissociation and vibrational predissociation, cage effects, interphase dynamics, reaction dynamics and energy transfer in clusters, dense fluids, liquids, solids and biophysical systems. The interdisciplinary nature of this research area was deliberated by intensive and extensive interactions between modern theory and advanced experimental methods. This volume provides a record of the invited lectures at the Symposium.

Metal-ligand Interactions in Organic Chemistry and Biochemistry Bernard Pullman, Natan Goldblum, 1977. **Quantum Pharmacology** W. G.

Richards, 2013-10-22. Quantum Pharmacology, Second Edition discusses molecular pharmacology, molecular quantum mechanics and the applications of theory to experiment. The book reviews molecular and quantitative pharmacology as well as acetylcholines, catecholamines and histamines. The text also discusses the central nervous system in relation to monoamines, acetylcholines, amino acids and peptides. The book explains wave functions and orbitals, secular equations, matrix elements and self-consistent molecular orbitals. One way to improve wave functions as a result of a self-consistent field or as an approximate calculation is to permit different configurations to interact. Linear mixing will lead to improved wave functions. The investigator can compute wave functions and energies of molecules for any set of nuclear coordinates. Quantum chemical calculations treat conformation as similar with geometry calculations are performed for a series of positions in one part of a molecule relative to another. The investigator can then compare the energies found in each position. The book points out that calculations of conformational internal energy surfaces for flexible pharmacological molecules treating the molecule or ion as isolated in space fit in with observed results of crystallographic experiments. The text is suitable for pharmacologists and scientists involved in molecular pharmacology, medicinal chemistry and quantum chemistry.
