Environmental Problems And Human Behavior:

Environmental Problems and Human Behavior Gerald T. Gardner, Paul C. Stern, 1996 This book examines the behavioural dimensions of global and regional environmental problems such as the greenhouse effect ozone depletion deforestation air pollution and water pollution The book asks What does our knowledge of human behaviour tell us about the root causes of environmental problems and about strategies for solving them Gardner and Stern seek to answer these questions by presenting a new synthesis of relevant research findings and theories from psychology the other behavioural and social sciences and other disciplines

Human Behavior and Environmental Sustainability Charles Vlek, Linda Steg, 2007-03-20 Environmental sustainability is a necessity for all countries worldwide and it is strongly related to human quality of life Given that sustainability problems largely result from human environment interactions social and behavioral research is developing as a necessary complement to natural science and technological studies of environmental problems To demonstrate this the various authors address key theoretical methodological and policy making questions about the behavioral dimensions of environmental sustainability Successively considered are the appreciation of environmental risk citizens annoyance from environmental noise the evaluation of urban environmental quality the restorative significance of nature experiences fundamental behavioral processes and environmental motivations and unsustainable behavior change and the roles of technology therein The usefulness of multidisciplinary research is emphasized Finally explicated is psychology's drive and potential for analyzing and supporting environmental sustainability as a long term human social and economic interest

Psychology and Environmental Change Raymond S. Nickerson, 2002-12-18 This book stimulates thinking on the topic of detrimental environmental change and how research psychologists can help to address the problem In addition to reporting environmentally relevant psychological research the author identifies the most pressing questions from an environmental point of view Psychology and Environmental Change focuses on ways in which human behavior contributes to the problem deals with the assessment and change of attitudes and with studies of change of behavior proposes ways in which psychological research can contribute to making technology and its products more environmentally benign and introduces topics such as consumption risk assessment cost benefit and tradeoff analyses competition negotiation and policymaking and how they relate to the objective of protecting the environment

Behavior and Environment T. Garling, R.G. Golledge, 1993-01-28 Active researchers in the areas of geography and psychology have contributed to this book Both fields are capable of increasing our scientific knowledge of how human behavior is interfaced with the molar physical environment Such knowledge is essential for the solution of many of today's most urgent environmental problems Failure to constrain use of scarce resources pollution due to human activities creation of technological hazards and deteriorating urban quality due to vandalism and crime are all well known examples The influence of psychology in geographical research has long been appreciated but it is only recently that psychologists have recognized they have something to learn from

geography In identifying the importance of two way interdisciplinary communication a psychologist and a geographer have been invited to each write a chapter in this book on a designated topic so that close comparisons can be drawn as to how the two disciplines approach the same difficulties Since the disciplines are to some extent complementary it is hoped that this close collaboration will have synergistic effects on the attempts of both to find solutions to environmental problems through an increased understanding of the many behavior environment interfaces

Environmental Problems/behavioral Solutions John D. Cone, Steven C. Hayes, 1980 A 1984 exploration of the relation between physical environment and human behaviour

Evolutionary Perspectives on Environmental Problems Iver Myrsetrud, 2017-07-05 The twenty first century presents an increasing number of environmental problems including toxic pollution global warming destruction of tropical forests extinction of biological diversity and depletion of natural resources These environmental problems are generally due to human behavior namely over consumption of resources and overpopulation Designing effective policies to address these problems requires a deep understanding of human behavior as well as ecology This in turn requires considerations of human nature and the evolutionary design of the human mind Evolutionary research on human behavior has profound implications for the environmental sciences The aim of this collection is to bring together a variety of chapters that show how and why

Part 1 Human Nature and Resource Conservation addresses environmental problems from different evolutionary perspectives Part 2 The Ecological Noble Savage Hypothesis examines the notion that our environmental problems are due to Western culture and that our ancestors and people in indigenous societies lived in harmony with nature until the corrupting influences of Western culture Part 3 The Tragedy of the Commons explores the conservation of common pool or open access natural resources such as fisheries forests grazing lands freshwater and clean air Part 4 The Evolution of Discounting and Conspicuous Consumption looks at the problem of explaining why people are so ecologically short sighted and why people in developed countries consume so many resources Part 5 Overpopulation and Fertility Declines addresses the evolution of human reproductive decisions Part 6 Biophilia aims to explain why people cherish nature as well as destroy it The goal of this volume is to introduce environmental thinkers to evolutionary perspectives on human behavior and the new interdisciplinary sciences of evolutionary psychology and behavioral ecology This reader aims to help bridge

The Psychology of Environmental Problems, 2014-04-04 A revision of Winter's Ecological Psychology 1996 this book applies psychological theory and research to environmental problems After outlining current environmental difficulties the authors demonstrate how 6 major approaches in psychology social psychological psychoanalytic behavioral physiological cognitive and holistic can be applied to environmental problems The authors demonstrate why it is critical to address environmental threats now and offer ideas on how psychological principles can contribute to building a sustainable culture Personal examples engage the reader and provide suggestions for changing behavior and political structures Reorganized and updated throughout the second edition features a new chapter on neuropsychological and health issues and a list of key concepts in each chapter

Cartoons and humorous analogies add a light touch to the book's serious message. Written for psychology and environmental studies students, the book is an excellent teaching tool in courses on environmental conservation or ecological issues found in departments of psychology, sociology, environmental science, and biology. It will also appeal to anyone interested in psychology's potential contributions to mounting ecological difficulties. *Environmental Psychology and Human Behavior* Mr. Rohit Manglik, 2024-03-22 EduGorilla Publication is a trusted name in the education sector committed to empowering learners with high quality study materials and resources. Environment and Behavior Robert B. Bechtel, 1997-01-06 This comprehensive introductory text presents a unified view of human environment problems. Unlike most texts in the field that treat environmental psychology as a branch of psychology only, *Environment and Behavior* covers the topic from a cross disciplinary nature. The book is more inclusive of all aspects of environmental studies and emphasizes the innovative thinking required to deal with environmental problems. The breadth of coverage offered by *Environment and Behavior* will enable the instructor to choose the focus for each particular course because it contains chapters on a variety of subject areas including environmental engineering, biology, geography, architecture, evolutionary biology, sociology, clinical psychology, and gerontology. *Environment and Behavior* is a one of a kind text with a unique style that will make it a must for all courses related to the environment including urban studies and psychology. *The Psychology of Environmental Problems* Susan M. Koger, Deborah DuNann Winter, 2011-01-07 This compelling and insightful textbook demonstrates how eight major approaches in psychology: social, psychoanalytical, behavioral, cognitive, physiological, health, developmental, and holistic, can be applied to create a more sustainable society. After outlining current environmental difficulties and historical antecedents, these various perspectives offer guidance for changing individual and collective behavior. This 3rd edition is thoroughly revised and updated throughout and features new chapters on the neuropsychology of toxic exposures, health, and the psychology of environmental stress and developmental psychology. It offers a comprehensive review of literature in various subdisciplines, demonstrating the wide applicability and relevance of psychology for addressing imminent environmental threats. Like both previous editions, the book's tone is widely accessible and engaging, and no previous background in psychology or environmental science is assumed or required. The use of personal examples and cartoons help engage the reader. The 3rd edition is also accompanied by online resources for instructors. *The Psychology of Environmental Problems: Psychology for Sustainability* 3rd Edition can be used as a primary or secondary textbook on a wide range of courses in Ecological Psychology, Environmental Science, Sustainability Sciences, Environmental Education, and Social Marketing. It also provides a valuable resource for professional audience of policymakers, legislators, and those working on sustainable communities. **Human Behavior and Environment** Irwin Altman, Joachim F. Wohlwill, 2012-12-06 The papers comprising this second volume of *Human Behavior and the Environment* represent as do

their predecessors a cross section of current work in the broad area of problems dealing with interrelationships between the physical environment and human behavior at both the individual and the aggregate levels Considering the two volumes as a unit we have included papers covering a broad spectrum of problems ranging from the theoretical to the applied and from the disciplinary based to the interdisciplinary and professional Approximately half of the papers are written by psychologists with the remainder coming in part from such other disciplines as sociology geography and from such diverse applied and professional fields as natural recreation landscape architecture urban planning and operations research The volumes thus provide an overview of work on current topical problems Yet as the field is developing specialization is inevitably increasing apace and the editors as well as the publisher have become convinced of the desirability for future volumes in this series to be organized along topical lines with successive volumes devoted to different aspects of this rather sprawling field Thus Volume 3 currently in the planning stage will be devoted exclusively to the interaction of children with the physical environment considered from diverse viewpoints again including authors from diverse fields of specialization

Environmental Design and Human Behavior Leonard Krasner, 2013-10-22 Environmental Design and Human Behavior A Psychology of the Individual in Society outlines the fundamental principles that govern the concept of environmental design in the context of human behavior The first part of the text deals with theoretical and historical influences of environmental design along with the ethical and value context The selection also covers methods for assessments of environment and interactionists approach to environmental design The next part details the application of environmental design this part tackles topics such as environmental design in the classroom designing an ideal classroom and implementation process and personal experience The book will be of great use to behavioral scientists sociologists community health and social workers and professionals involved in the designing of environment such as city planners
