Environmental Problems In Eastern Europe:

Environmental problems in Eastern Europe F. W. Carter, David Turnock, 1993 Environmental Problems in Eastern Europe Francis W. Carter, David Turnock, 1996 Providing a comprehensive descriptive analysis of a wide range of Central and East European countries this updated paperback edition offers an invaluable study of pollution problems and effects on the quality of life Revisions include new chapter on Slovakia demonstrating the implementation of a number of practical measures which have made a considerable impact on environmental problems that arose under communism and have been tackled during the transition new concluding chapter which provides an important overview of recent developments in Eastern Europe and discusses topical issues such as health hazards and methods of charging polluters for environmental damage *Environmental Problems in East-Central Europe* Frank Carter, David Turnock, 2002-09-26 In this new edition the progress made in the last decade to solve the environmental problems described in the first edition is assessed The attempts to bring environmental legislation into line with West European norms is also described Environmental Problems of East Central Europe looks at air and water pollution modern farming water supplies waste management and landscape protection These topics are placed within economic social and political profiles as spending on a clean environment must be reconciled with welfare spending and the safeguarding of jobs European Union assistance civil society and the work of environmental NGOs are also discussed All of these matters are considered within the context of the wider geographical area and then by each individual country including the previously communist states lying to the west of the Soviet Union now with the former federal states of Czechoslovakia and Yugoslavia broken up into seven different entities and a review of the former Soviet Union with particular reference to the Baltic States Environmental Problems in East Central Europe provides a wealth of up to date reference material with a vast amount of supporting literature on environmental conditions and the functioning of civil society and a map of each country The environment is being taken seriously by them all such is the influence of the Rio sustainability agenda in general and the EU environmental acquis in particular The book reveals that Eastern Europe is not a blighted area but in some respects has a higher biodiversity than Western Europe Although there is enormous waste and inefficiency in energy use people actually consume relatively little and the East therefore has some lessons for the West in terms of managing on the bases of fair share of the earth's resources *Environmental Issues in Eastern Europe* Jeremy Russell, 1990 The identification and analysis of environmental issues in the countries formerly known as Eastern Europe poses great problems both for the countries themselves and for those who wish to provide assistance A lack of good data combined with an abundance of apocalyptic media coverage has created a confusion as to priorities targets and the coordination of both domestic and international policies to deal with environmental degradation in the region Environmental Transitions Petr Pavlínek, John Pickles, 2000 Environmental Transitions is a detailed and comprehensive account of the environmental changes in Central and Eastern Europe both during and after state socialism The book

illustrates how transformations after 1989 have brought major environmental improvements as well as new environmental problems. Environmental Transitions contains detailed case studies from the region including an historical geographical analysis of the environmental change, health impacts of environmental degradation, the role of environmental issues during the anti-communist revolutions, legislative reform, the effects of transition on environmental quality after 1989.

Environmental Action in Eastern Europe Barbara Jancar-Webster, 2016-09-16 The environmental crisis in Eastern Europe, air and water pollution, toxic waste dumps and unsafe nuclear facilities has been vividly documented since the revolution of 1989. Not only did the communist states have an abysmal record of environmental destruction but the issue of environmental protection and safety proved to be one of the most powerful catalysts of unified opposition to these regimes. This collection of essays by both Western and East European experts examines the efforts to develop strategies for dealing with the crisis both by governments and at the grassroots level of newly emerging Green movements. Among the countries represented here are Poland, Hungary, Czechoslovakia, Lithuania, Slovenia and the Commonwealth of Independent States. Environmental Problems in the Soviet Union & Eastern Europe Frederick Bernard Singleton, 1987 U.S. Environmental Initiatives in Eastern Europe United States. Congress. House. Committee on Energy and Commerce. Subcommittee on Transportation and Hazardous Materials, 1990 Socioeconomic and Environmental Impacts on Agriculture in the New Europe Serban Scrieciu, 2011-03-13 This book looks at agriculture and the environment placed within the dynamic context of post-communist societal change and entry into the European Union. EU Scrieciu explores developments in eleven Central and Eastern European CEE countries and argues for agriculture's natural place in these societies. The history of these countries is significant in how it has shaped the institutions and influenced the outcomes. In many cases during communism, agriculture was not considered a strategic priority. An ecological consciousness did not figure high on the agendas of authoritarian regimes. After 1990, some post-communist farm economies progressed slower than others and environmental pressures mostly diminished with agricultural restructuring. In parts of CEE, increases in numbers of low-input small farms have resulted in some though largely unintended ecological benefits. A dual environmental challenge has nevertheless surfaced. On one hand, environmentally unsustainable practices have been attributed to some low-input farming. On the other hand, risks of farm over-intensification and resource overexploitation are on the rise. Also, environmental regulatory and institutional frameworks are not always effectively in place. EU membership is not creating the anticipated benefits for farm growth. There are a number of systemic structural barriers preventing many farmers from drawing on Common Agricultural Policy incentives and support. The presence of many vulnerable poor farms is clearly problematic, particularly economically. However, small-scale farms could be made more acceptable and profitable by ensuring EU policies acknowledge their value and by building institutions to support alternative farm growth strategies aside from the traditional European model of individual corporate farm.

expansion The voluntary uptake of grassroots rural cooperation and farm associations may represent such an alternative Future European farm policy reforms need to reach the small and vulnerable and better tackle issues of farm equity poverty and agricultural sustainability in the new Europe This is a timely contribution as this type of transition has just begun This book should be of use to students and researchers looking at agricultural and environmental economics post communist rural societal change European integration and the Common Agricultural Policy *Coping with Crisis in Eastern Europe's Environment* J. Alcamo,1992-11-15 Along with the winds of political change in Central and Eastern Europe have come the realities of severely polluted air water and soil Among the greatest challenges for Eastern Europeans in the coming years will be to cope with these environmental problems during a difficult economic and political transition period *Eastern Europe Environmental and Energy Issues* United States.
