Barker,Sally Lloyd-Evans,1998 Resource Sustainability and Caribbean Development follows on from Barker and McGregor s
earlier edited volume Environment and Development in the Caribbean Geographical Perspectives 1995 and aims to focus
more specifically on the theme of sustainability and to examine research contributions of geographers to problems of
sustainability in the Caribbean region While the problems of environmental degradation have increased in recent decades the
ability of Caribbean governments to cope with the consequences appears to have been eroded There is however a growing
recognition within the region of the need for development strategies that focus on the social needs of the people yet
simultaneously protect the fragile natural environment It is hoped that the research presented here will serve to inform the
wider research and decision making community of the main problems associated with resource sustainability in the region

Environments Joseph Seckbach,2013-12-01 Modern methods and approaches such as the analysis of molecular sequences to infer evolutionary relationships among organisms have provided vast new sets of data to further our understanding of living organisms but there remain enigmas in the biological world that will keep scientists working and thinking for decades Microorganisms by virtue of their small size and almost unbounded diversity provide ample examples of intriguing mysteries that are being challenged with all of the techniques the modern scientific arsenal can provide One whole arena of this battle to resolve puzzling mysteries about various microorganisms is the almost unbelievable ability of many microorganisms to live in extreme environments Whether the challenge is extreme heat cold pressure hyper salinity alkalinity or acidity some micro organisms live now where no life might seem possible This fascinating state of affairs is the context for this present volume edited by Joseph Seckbach This Volume is a compilation of many of the especially interesting questions and biological challenges that arise in the consideration of microorganisms in general and the extremophiles in particular

The Biodiversity Crisis and Crustacea - Proceedings of the Fourth International Crustacean Congress J. Carel von Vaupel Klein,2000-06-01 The papers in this volume have been grouped according to the main sub themes of the congress and primarily deal with the biodiversity issues of invasive crustacea ecology and behaviour and fisheries and aquaculture

Wasser,2012-12-06 This volume consists of papers written by evolutionary molecular and organismal biologists geneticists ecologists behavioural ecologists morphologists mathematicians theoreticians and experimentalists in honour of Professor Eviatar Eibi Nevo on the occasion of his seventieth birthday The contributors are only a small subset of Eibi s many friends collaborators and students not that one can distinguish these categories among Eibi s colleagues His widespread influence and activity both in Israel and more generally as a leading evolutionary biologist is indicated by his many co authors on books and papers and by his many students integrated in teaching and research This volume presents some of the most recent dramatic results of molecular genomic and organismal evolutionary processes It represents analyses experiments observations reviews discussions and forecasts of evolutionary theory comprising both novel methods and results reanalyzed and reviewed data sets based on comparative experimental and theoretical studies utilizing model organisms across phylogeny including bacteria fungi plants animals and humans It elucidates the revolution in molecular biology that ushered in our understanding of the evolutionary process over time and space The topics discussed include major problems of evolutionary theory concerning origins phylogeny relative importance of evolutionary forces structure and function adaptation and speciation in space and time in changing and stressful environments A major emerging generalization is the nonrandomness of genome structure highlighting the importance of natural selection as a major organizing evolutionary

force not only at the phenotypic level but most importantly at the interlinked genotypic molecular level The integration between the molecular and organismal levels unifies life which is subjected to the mechanism of natural selection as a major orienting evolutionary force Linking Science and Technology to Society's Environmental Goals National Research Council,Policy and Global Affairs,Policy Division,1996-11-21 Where should the United States focus its long term efforts to improve the nation s environment What are the nation s most important environmental issues What role should science and technology play in addressing these issues Linking Science and Technology to Society s Environmental Goals provides the current thinking and answers to these questions Based on input from a range of experts and interested individuals including representatives of industry government academia environmental organizations and Native American communities this book urges policymakers to Use social science and risk assessment to guide decision making Monitor environmental changes in a more thorough consistent and coordinated manner Reduce the adverse impact of chemicals on the environment Move away from the use of fossil fuels Adopt an environmental approach to engineering that reduces the use of natural resources Substantially increase our understanding of the relationship between population and consumption This book will be of special interest to policymakers in government and industry environmental scientists engineers and advocates and faculty students and researchers **Wildlife Review** ,1989
