*Risk Assessment as a Tool for Water Resources Decision-Making in Central Asia* Christopher M. Teaf, Bulat K. Yessekin, Mikhail Kh. Khankhasayev, 2012-12-06 Water resources both in terms of water quality and water quantity are of critical importance in planning for sustainable development in Central Asia and the Caucasus as well as in other parts of the world This NATO Advanced Research Workshop ARW entitled Risk Assessment as a Tool for Water Resources Decision Making in Central Asia was conducted on

September 23 25 2002 in Almaty Kazakhstan The ARW addressed methods and approaches by which risk assessment methodology that has been developed in the United States Europe and elsewhere can be applied to environmental and water resource problems in Central Asia The stated goals of the ARW were to assess the existing state of knowledge in the context of potential applications of risk assessment tools to water resources and other environmental issues in Central Asia to identify research gaps and directions for future research in the area of water resources which may be addressed through the application of risk assessment tools to promote closer working relationships between the scientists and technical experts from Central Asia and the Caucasus as well as the scientists and technical experts from the United States and Europe Based on historical experiences of Central Asian scientists and their colleagues in other parts of the world there is a demonstrated need in the region to provide education training and technical assistance on environmental decision making tools including risk assessment

**Radioecology and the Restoration of Radioactive-Contaminated Sites** F.F. Luykx, Martin J. Frissel, 2012-12-06 Most of the nuclear facilities built since the Second World War have ceased active operation and have been decommissioned Some of the sites are heavily contaminated with radioactive substances Correct and efficient action to mitigate the radiological consequences of such contamination will only be possible when the behaviour of radionuclides in the terrestrial environment is sufficiently well known Yet radioecologists often find it difficult to study the transfer of radioactivity in agricultural land

and semi natural ecosystems because of the complexity and diversity of such environments The present book presents an analysis of all the factors that affect the behaviour of radionuclides as they move from their point of release through the environment and then enter the tissues of biota living in the ecosystems in particular plants and animals consumed by humans The course on which the book is based was held in a region that is heavily contaminated by radioactive discharges into the environment during nuclear weapons fabrication in the 1950s and 60s and due to a severe accidental release following the explosion of a rad waste tank in 1957 This allowed in situ training of the students The book s main emphasis is on specific radioecological problems in severely contaminated areas in the former Soviet Union the Southern Urals Trail the rivers Techa Isert Tobol Irtis Ob and the 30 km zone around Chernobyl Systems examined include soils arable and pasture land forests lakes and rivers Special attention is paid to the effects of radiation on natural ecosystems trees soil dwelling organisms and aquatic organisms Synergistic effects are also considered Short medium and long term countermeasures are discussed
