Enterprise Jms Programming:

Enterprise JMS Programming Shaun Terry, 2002-03 Java Message Service JMS is a key part of Java 2 Enterprise Edition This book by a senior Java architect at Sun is the most detailed practical guide available to JMS Filled with robust examples and coverage of JMS security JMS based systems in an Internet environment and other topics not found in other books it s a must have reference for Java enterprise developers *Enterprise JMS Programming* Shaun Terry, 2002-03-01 This book brings you complete coverage of Sun s Java Message Service API from one of Sun s very own Java experts You ll find detailed coverage of topics such as JMS security and integration of JMS based systems in Internet and application server environments Clear and concise coverage with robust examples set this book apart from the existing titles on the market exactly what serious developers are looking for

Java Message Service API Tutorial and Reference Mark Hapner, 2002 Java Message Service JMS represents a powerful solution for communicating between Java enterprise applications software components and legacy systems In this authoritative tutorial and comprehensive reference Sun s Java Message Service architects offer start to finish coverage of peer to peer JMS development with Java 2 Platform Enterprise Edition Release 1.3 JMS is now fully integrated into the J2EE platform and this is the first book to show how to make the most of JMS in the context of sophisticated J2EE application development The authors begin by introducing the JMS API to developers who are new to it Then with the help of extensive programming examples they demonstrate key JMS techniques for enabling applications to create send receive and read messages and for integrating with existing back office and enterprise systems Coverage includes consuming messages asynchronously with message driven beans producing messages from application clients accessing entity beans from message driven bean producing messages from session beans and much more For all Java developers building applications that must communicate and share information *Java Message Service* David A Chappell, Richard Monson-Haefel, 2000-12-04 This book is a thorough introduction to Java Message Service JMS the standard Java application program interface API from Sun Microsystems that supports the formal communication known as messaging between computers in a network JMS provides a common interface to standard messaging protocols and to special messaging services in support of Java programs The messages exchange crucial data between computers rather than between users information such as event notification and service requests Messaging is often used to coordinate programs in dissimilar systems or written in different programming languages Using the JMS interface a programmer can invoke the messaging services of IBM s MQSeries Progress Software s SonicMQ and other popular messaging product vendors In addition JMS supports messages that contain serialized Java objects and messages that contain Extensible Markup Language XML pages Messaging is a powerful new paradigm that makes it easier to uncouple different parts of an enterprise application Messaging clients work by sending messages to a message server which is responsible for delivering the messages to their destination Message delivery is asynchronous meaning that the client can continue working without

waiting for the message to be delivered The contents of the message can be anything from a simple text string to a serialized Java object or an XML document Java Message Service shows how to build applications using the point to point and publish and subscribe models how to use features like transactions and durable subscriptions to make an application reliable and how to use messaging within Enterprise JavaBeans It also introduces a new EJB type the MessageDrivenBean that is part of EJB 2.0 and discusses integration of messaging into J2EE *Enterprise Messaging Using JMS and IBM WebSphere* Kareem Yusuf, 2004 Details the JMS API covering the latest version 1.1 and discusses application development based on IBM WebSphere implementations Key coverage on WebSphere MQ Websphere MQ Event Broker JMS administration tasks and common usage scenarios Examples coding JMS in servlets portlets EJBs and communicating with non JMS applications
