The Practice of Enterprise Modeling Anne Persson, Janis Stirna, 2009-11-16 Enterprise modeling EM has gained substantial popularity both in the academic community and among practitioners A variety of EM methods approaches and tools are being developed and offered on the market In practice they are used for various purposes such as business strategy development process restructuring as well as business and IT architecture alignment and governance PoEM 2009 the second IFIP WG 8.1 Working Conference on The Practice of Enterprise Modeling took place in November in Stockholm Sweden The conference series is a dedicated forum where the use of EM in practice is addressed by bringing together researchers users and practitioners in order to develop a better understanding of the practice of EM to contribute to improved EM practice as well as to share knowledge and experiences PoEM 2009 attracted 41 submissions from many different parts of the world out of which the Program Committee selected 17 high quality papers Among the authors of these papers we find both researchers and practitioners The resulting program reflects the fact that the topic of EM encompasses human organizational issues as well as more technical aspects related to the development of information systems The program was organized in six thematic sessions Experiences in EM The process of modeling EM in information systems development Model quality and reuse EM for Services modeling New ventures in EM The program also featured two keynotes by experienced EM practitioners H. Vard D. Leveraging Knowledge for Innovation in Collaborative Networks Luis M. Camarinha-Matos, Iraklis Paraskakis, Hamideh Afsarmanesh, 2009-09-21 Collaborative Networks A Tool for Promoting Co creation and Innovation The collaborative networks paradigm offers powerful socio organizational mechanisms supported by advanced information and communication technologies for promoting innovation This in turn leads to new products and services growth of better customer relationships establishing better project and process management and building higher performing consortia By putting diverse entities that bring different perspectives competencies practices and cultures to work together collaborative networks develop the right environment for the emergence of new ideas and more efficient yet practical solutions This aspect is particularly important for small and medium enterprises which typically lack critical mass and can greatly benefit from participation in co innovation networks However larger organizations also benefit from the challenges and the diversity found in collaborative ecosystems In terms of research in addition to the trend identified in previous years toward a sounder consolidation of the theoretical foundation in this discipline there is now a direction of developments more focused on modeling and reasoning about new collaboration patterns and their contribution to value

creation Soft issues including social capital cultural aspects ethics and value systems trust emotions behavior etc continue to deserve particular attention in terms of modeling and reasoning Exploitation of new application domains such as health care education and active aging for retired professionals also help identify new research challenges both in terms of modeling and ICT support development
