Empirical Studies on the Development of Executable Business Processes Daniel Lübke, Cesare

Pautasso, 2019-07-26 This book collects essential research on the practical application of executable business process modeling in real world projects i e model driven solutions for the support and automation of digital business processes that are created using languages such as BPEL or BPMN It mainly focuses on empirical research but also includes an up to date cross section of case studies in order to assess examples of BPM s practical impact in the industry On the one hand executable models are formally and precisely defined so that computers can interpret and execute them on the other they are visualized so that humans can describe document and optimize business processes at a higher level of abstraction than with traditional textual programming languages While these important research areas have long been separated from one another this book is an attempt at cross fertilization driven by the insight that business processes are the software behind today s digital organizations and that achieving a precise representation of such processes is key to their reliable execution Consequently the book presents various case studies and experiments that investigate questions of interest to both academia e g identifying challenges for which no solution exists sharing new insights into how existing approaches are actually used and industry e g guidelines on using certain technologies and on modeling comprehensible and executable processes Both researchers and practitioners will benefit from the presentation of how concepts are transformed into working solutions The studies are presented in a structured manner and with sufficient rigor to be considered empirical research further enhancing the book s value for the research community while practitioners will find concrete guidance on making the right decisions for their projects

Hagenberg Business Process Modelling Method Felix Kossak,Christa Illibauer,Verena Geist,Christine Natschläger,Thomas Ziebermayr,Bernhard Freudenthaler,Theodorich Kopetzky,Klaus-Dieter Schewe,2016-04-27 This book presents a proposal for designing business process management BPM systems that comprise much more than just process modelling Based on a purified Business Process Model and Notation BPMN variant the authors present proposals for several important issues in BPM that have not been adequately considered in the BPMN 2.0 standard It focusses on modality as well as actor and user interaction modelling and offers an enhanced communication concept In order to render models executable the semantics of the modelling language needs to be described rigorously enough to prevent deviating interpretations by different tools For this reason the semantics of the necessary concepts introduced in this book are defined using the Abstract State Machine ASM method Finally the authors show how the different parts of the model fit together using a simple example process and introduce the enhanced Process Platform eP2 architecture which binds all the different components together The resulting method is named Hagenberg Business Process Modelling H BPM after the Austrian village where it was designed The motivation for the development of the H BPM method stems from several industrial projects in which business analysts and software developers struggled with redundancies and inconsistencies in system documentation due to missing integration The book is aimed at researchers in business process management and industry 4.0 as well as advanced professionals in these areas

Linguistic Refactoring of Business Process Models Fabian Pittke,2016-03-02 In the past decades organizations had to face numerous challenges due to intensifying globalization shorter innovation cycles and growing IT support Business process management is seen as a comprehensive approach to address these challenges For this purpose business process models are increasingly utilized to document and redesign relevant parts of the organization s business operations Since organizations tend to have a huge number of such models analysis techniques are required that ensure the quality of these process models in an automatic fashion The goal of this doctoral thesis is the development of model refactoring techniques by integrating and applying concepts from the three main branches of theoretical linguistics syntax semantics and pragmatics The syntactical refactoring technique addresses linguistic issues that arise by expressing process behavior with natural language The semantic refactoring technique reworks terminology with overlapping and synonymous meaning The pragmatic refactoring technique provides recommendations for incompletely specified process models All of the presented techniques have been evaluated with real world process model repositories from various industries to demonstrate their applicability and efficiency
