

What is Security?

➤ Two fundamentally different securities

○ Unconditional security

- No matter how much computer power is available, the cipher cannot be broken
- Using Shannon's information theory
 - ✓ The entropy of the message $I(M)$ is same as the entropy of the message $I(M|C)$ when known the ciphertext (and possible more)

○ Computational security

- Given limited computing resources (e.g time needed for calculations is greater than age of universe), the cipher cannot be broken
 - ✓ What do we mean "broken"?
- Proved by some complexity equivalence approach
