Freddy Van Oystaeyen,1999-03-31 Contains contributions by over 25 leading international mathematicians in the areas of commutative algebra and algebraic geometry The text presents developments and results based on and inspired by the work of Mario Fiorentini It covers topics ranging from almost numerical invariants of algebraic curves to deformation of projective schemes Proceedings of the 1984 Vancouver Conference in Algebraic Geometry James B. Carrell,A. V. Geramita,Peter Russell,Natural Sciences and Engineering Research Council Canada,University of British Columbia,1986 Covers a cross section of the developments in modern algebraic geometry This work covers topics including algebraic groups and representation theory enumerative geometry Schubert varieties rationality compactifications and surfaces *Enumerative Geometry* Sebastian Xambo-Descamps,2006-11-14 The central topics of this volume are enumerative geometry and intersection theory The contributions are original refereed research papers

Enumerative Algebraic Geometry Steven L. Kleiman,Anders Thorup,1991 1989 marked the 150th anniversary of the birth of the great Danish mathematician Hieronymus George Zeuthen Zeuthen s name is known to every algebraic geometer because of his discovery of a basic invariant of surfaces However he also did fundamental research in intersection theory enumerative geometry and the projective geometry of curves and surfaces Zeuthen s extraordinary devotion to his subject his characteristic depth thoroughness and clarity of thought and his precise and succinct writing style are truly inspiring During the past ten years or so algebraic geometers have reexamined Zeuthen s work drawing from it inspiration and new directions for development in the field The 1989 Zeuthen Symposium held in the summer of 1989 at the Mathematical Institute of the University of Copenhagen provided a historic opportunity for mathematicians to gather and examine those areas in contemporary mathematical research which have evolved from Zeuthen s fruitful ideas This volume containing papers presented during the symposium as well as others inspired by it illuminates some currently active areas of research in enumerative algebraic geometry Algebraic Geometry and Complex Analysis Enrique Ramirez de Arellano,2006-11-14 **Projective Geometry and Formal Geometry** Lucian Badescu,2012-12-06 The aim of this monograph is to introduce the reader to modern methods of projective geometry involving certain techniques of formal geometry Some of these methods are illustrated in the first part

through the proofs of a number of results of a rather classical flavor involving in a crucial way the first infinitesimal neighbourhood of a given subvariety in an ambient variety Motivated by the first part in the second formal functions on the formal completion $X \hat{\rightarrow} Y$ of X along a closed subvariety Y are studied particularly the extension problem of formal functions to rational functions The formal scheme $X \hat{\rightarrow} Y$ introduced to algebraic geometry by Zariski and Grothendieck in the 1950s is an analogue of the concept of a tubular neighbourhood of a submanifold of a complex manifold It is very well suited to study the given embedding $Y \subset X$ The deep relationship of formal geometry with the most important connectivity theorems in algebraic geometry or with complex geometry is also studied Some of the formal methods are illustrated and applied to homogeneous spaces The book contains a lot of results obtained over the last thirty years many of which never appeared in a monograph or textbook It addresses to algebraic geometers as well as to those interested in using methods of algebraic geometry

geometry **Algebraic Geometry. Sundance 1986** Audun Holme, Robert Speiser, 2006-11-14 This volume presents selected papers resulting from the meeting at Sundance on enumerative algebraic geometry The papers are original research articles and concentrate on the underlying geometry of the subject Birational Geometry and Moduli Spaces Elisabetta Colombo, Barbara Fantechi, Paola Frediani, Donatella Iacono, Rita Pardini, 2020-02-25 This volume collects contributions from speakers at the INdAM Workshop Birational Geometry and Moduli Spaces which was held in Rome on 11–15 June 2018 The workshop was devoted to the interplay between birational geometry and moduli spaces and the contributions of the volume reflect the same idea focusing on both these areas and their interaction In particular the book includes both surveys and original papers on irreducible holomorphic symplectic manifolds Severi varieties degenerations of Calabi Yau varieties uniruled threefolds toric Fano threefolds mirror symmetry canonical bundle formula the Lefschetz principle birational transformations and deformations of diagrams of algebras The intention is to disseminate the knowledge of advanced results and key techniques used to solve open problems The book is intended for all advanced graduate students and researchers interested in the new research frontiers of birational geometry and moduli spaces **Algebraic Surfaces and**

Holomorphic Vector Bundles Robert Friedman, 2012-12-06 This book is based on courses given at Columbia University on vector bundles 1988 and on the theory of algebraic surfaces 1992 as well as lectures in the Park City IIAS Mathematics Institute on 4 manifolds and Donaldson invariants. The goal of these lectures was to acquaint researchers in 4 manifold topology with the classification of algebraic surfaces and with methods for describing moduli spaces of holomorphic bundles on algebraic surfaces with a view toward computing Donaldson invariants. Since that time the focus of 4 manifold topology has shifted dramatically at first because topological methods have largely superseded algebro geometric methods in computing Donaldson invariants and more importantly because of Witten which have greatly simplified the new invariants defined by Seiberg. This plified the theory and led to proofs of the basic conjectures concerning the 4 manifold topology of algebraic surfaces. However the study of algebraic surfaces and the moduli spaces of bundles on them remains a fundamental

problem in algebraic geometry and I hope that this book will make this subject more accessible Moreover the recent applications of Seiberg Witten theory to symplectic 4 manifolds suggest that there is room for yet another treatment of the classification of algebraic surfaces In particular despite the number of excellent books concerning algebraic surfaces I hope that the half of this book devoted to them will serve as an introduction to the subject

Singularity Theory and its

Applications David Mond,James Montaldi,2006-11-14 A workshop on Singularities Bifurcation and Dynamics was held at Warwick in July 1989 as part of a year long symposium on Singularity Theory and its applications The proceedings fall into two halves Volume I mainly on connections with algebraic geometry and volume II on connections with dynamical systems theory bifurcation theory and applications in the sciences The papers are orginal research stimulated by the symposium and workshops All have been refereed and none will appear elsewhere The main topic deformation theory is represented by several papers on descriptions of the bases of versal deformations and several more on descriptions of the generic fibres Other topics include stratifications and applications to differential geometry *Algebraic Geometry* Spencer Bloch,Charles Herbert Clemens,American Mathematical Society,1987 *Gröbner Bases and Applications* Bruno Buchberger,Franz Winkler,1998-02-26 Comprehensive account of theory and applications of Gr bner bases co edited by the subject s inventor

Commutative Algebra David Eisenbud,2013-12-01 Commutative Algebra is best understood with knowledge of the geometric ideas that have played a great role in its formation in short with a view towards algebraic geometry The author presents a comprehensive view of commutative algebra from basics such as localization and primary decomposition through dimension theory differentials homological methods free resolutions and duality emphasizing the origins of the ideas and their connections with other parts of mathematics Many exercises illustrate and sharpen the theory and extended exercises give the reader an active part in complementing the material presented in the text One novel feature is a chapter devoted to a quick but thorough treatment of Grobner basis theory and the constructive methods in commutative algebra and algebraic geometry that flow from it Applications of the theory and even suggestions for computer algebra projects are included This book will appeal to readers from beginners to advanced students of commutative algebra or algebraic geometry To help beginners the essential ideals from algebraic geometry are treated from scratch Appendices on homological algebra multilinear algebra and several other useful topics help to make the book relatively self contained Novel results and presentations are scattered throughout the text *Acta Scientiarum Mathematicarum* József Attila Tudományegyetem,1990
