Partha Dasgupta, Karl-Göran Mäler, 1997-03-13 Two and a half billion people are affected directly on a day to day basis by the allocation and use of purely local resources Yet official development economics has concentrated on headline international issues and only recently begun to take account of the dependence of poor countries on their natural resources the link between acute poverty and environmental degradation and the problems associated with the management of local common property such as soil and soil cover water forests and their products animals and fisheries In these volumes which are part of the WIDER programme on the Economics of the Environment expert contributors provide a set of authoritative studies of emerging development issues ranging from foundational matters to case studies original research in areas where there has been a paucity of work to survey papers They address both analytic and empirical issues on the role of environmental resources in the development process presenting explanations of existing situations and policies for the future A wealth of interests and backgrounds is represented and reflected in the cross fertilization between papers **The Environment and Emerging Development Issues** Partha Dasgupta, Karl-Göran Mäler, 2000 Two and a half billion people are affected directly

Effects of Environmental Policy Carlo Carraro, Gilbert E. Metcalf, 2009-02-15 Most people would agree that it makes sense

to tax a company that pollutes in a way that directly reflects the amount of environmental and social damage it has done Yet in practice such taxes are fraught with difficulty and have far reaching implications A company facing a new tax may lay off

workers for example exacerbating an unemployment problem This volume focuses on such external issues and examines in detail the trade offs involved in designing policies to deal with environmental problems Reflecting the broad nature of the

subject the contributors include leading economists in the areas of public finance industrial organization and trade theory as well as environmental economists Integrating both theoretical and empirical methods they examine environmental policy

design as it relates to location decisions compliance costs administrative costs effects on research and development and international factor movements Shedding light on an extraordinarily complex and important topic this collection will be of

interest to all those involved in designing effective environmental policy **Trade, Innovation, Environment** Carlo

Carraro, 2012-12-06 The research projects at Fondazione Mattei have for some time now been dealing with the international dimension of environmental policy Indeed most environmental phenomena have international implications which stem from a

number of factors physical ones such as the transnational or global consequences of pollution and resource conservation technological factors such as technological cooperation and diffusion and economic factors such as trad plant localiza tion

and migrations Even in the absence of transnational pollution therefore the environmental issues involve substantial

interdependence among countries This volume edited by Carlo Carraro presents some of the research which we carried out in international environmental policy focusing on the relationship between trade innovation and the environment The papers

in part one discuss the impact of international trade and institutions on environmental resources Those in part two deal with the importance of innovation when attempting to solve the major environmental problems The papers in part three finally

focus on specific policy issues stressing the importance of institutions and property rights The whole set of contributions can be seen as progress in environmental economics The different chapters highlight the close relationship between envi

ronmental issues and economic development and they merge the literature on the environment with the literature on innovation economic growth trade plant localization institutions etc **Gender Challenges** Bina Agarwal,2015-12-21 An internationally acclaimed economist Bina Agarwal is known for her path breaking writings on agriculture property rights and the environment Her three volume compendium brings together a selection of her essays written over three decades Combining diverse disciplines methodologies and cross country comparisons the essays challenge standard economic analyses and assumptions from a gender perspective They provide original insights on a wide range of theoretical empirical and policy issues of continuing importance in contemporary debates The first volume spans varied dimensions of the author s writings on agrarian change from 1981 to the present It identifies gender inequalities in the impact of agricultural modernisation and technical change across Asia and Africa the links between women poverty and economic growth processes and data biases in measuring women s work It traces the gendered costs of droughts and famine and challenges top down methods of innovation diffusion Focusing on the key role of women farmers in food security it also offers innovative solutions including public land banks and group farming The second volume focuses on the author s paradigm shifting work on women s property status in South Asia Challenging conventional approaches to women s empowerment it demonstrates how promoting access to property especially land is key to enhancing women s economic and social well being and deterring domestic violence It details gender inequalities in inheritance laws public policies and land struggles and presents the bargaining framework for understanding and finding ways of overcoming these inequalities both within families and in markets communities and vis vis the state This third volume traces the relationship between gender and environmental change Critiquing ecofeminist assumptions it presents an alternative theoretical framework It also examines the causes of women s absence as well as the impact of their presence in environmental collective action Based on innovative fieldwork on community institutions for forest governance the author demonstrates how a critical mass of women can significantly improve conservation outcomes In conclusion she reflects on which features of feminist scholarship make for an effective challenge to mainstream economics **Green Accounting** Peter Bartelmus,E.K. Seifert,2018-01-12 This title was first published in 2003 Our cherished economic indicators of income product consumption and capital fail in taking a long term view of social progress They do not account for environmental deterioration which impairs the quality of life of present and future generations and hence the sustainability of development Greening the conventional national and corporate accounts introduces environmental impacts and costs into these accounts and balances The result is a new compass for steering the economy towards sustainability which may change not only our main measures of economic performance but also the basic tenets of environmental and resource policies This book presents methodological advances and case studies of environmental accounting and discusses their use in environmental management and policies In their introduction the editors provide a critical perspective of historical developments and current debates *Approaches to Environmental Accounting* Alfred

Franz, Carsten Stahmer, 2012-12-06 It is really no longer necessary to stress the importance of availing of sound statistical information on the environment Originally limited to circles of insiders and experts this message has now fully reached political decision makers and the general public at large In this procedure macro economics has summed a particular role e g when evaluating related financial implications but also when propagating alarming overall figures on the harm this generation is doing to our environment Accordingly the need is obvious to further promote the development of international standards and operation in the field of environment statistics in general and environmental economic accounts in particular Therefore the Austrian Statistical Society ASS together with the Austrian Central Statistical Office ACSO with pleasure hosted the IARIW Special Conference on Environmental Economic Accounts in May 1991 These institutions are similarly pleased that now this publication on the proceedings of this Conference can be presented They connect this with grateful thanks to all those who contributed to the successful completion of this work in particular the authors and the editors The impression seems warranted that the outcome of this coordinated overall endeavour was more than just better mutual understanding viz something like an increasing consciousness of the common nominator tending to expand
