Environment Cultural Behavior Ecologic:

Community Mental Health and Behavioral-Ecology A.M. Jeger,R.S. Slotnick,2012-12-06 This volume is addressed to professionals and students in community mental health including researchers clinicians administrators educators and students in relevant specialties within the fields of psychology psychiatry social work public health and nursing The intent of this book is to serve as a practical resource for professionals and also as a didactic text for students In addition the volume seeks to make a theoretical contribution to the field by presenting for the first time in book form a behavioral ecological perspective in community mental health We present behavioral ecology as an emerging perspective that is concerned with the interdependence of people behavior and their sociophysical environments Behavioral ecology attributes mental health problems to transactions between persons and their settings rather than to causes rooted exclusively within individuals or environments In this volume we advance the notion of behavioral ecology as an integration of two broad perspectives behavioral approaches as derived from the individual psychology of learning and ecological approaches as encompassing the study of communities environments and social systems Through the programs brought together in this book we are arguing for a merging of these two areas for purposes of advancing theory research and practice in community mental health

Culture and Environment Irwin Altman,Martin M. Chemers,1984-05-25 It covers a wide range of topics dealing with the complex relationship between people and the environment

Human Behavioral Ecology and Coastal Environments
Heather B. Thakar,Carola Flores Fernandez,2023-02-14 Examples of a research approach that sheds light on coastal societies in the past In this volume contributors apply human behavioral ecology theoretical models to coastal environments around the globe and to the use of coastal resources by past human societies Evidence demonstrates that coastlines and islands are dynamic environments that were important in early human migrations and this volume shows how researchers can gain insights about human behavior in these settings through its critical regional reviews and detailed local case studies The volume begins by introducing the importance of theory in the reconstruction of human behavior and provides examples of traditional foraging models Contributors then offer perspectives from North Central and South America the Caribbean Europe Africa Australia and Polynesia They discuss unique challenges faced by coastal societies including extreme seasonality patchy resource distribution natural hazards balancing coastal and terrestrial resource needs aquatic technological innovation and multiscale environmental change *Human Behavioral Ecology and Coastal Environments* demonstrates that exploring decision making and cultural behaviors is key to understanding how humans have lived in and related to these environments Through its application of human behavioral ecology models this volume sheds light on the evolving adaptations of societies in a variety of coastal contexts through time and across space A volume in the series *Society and Ecology in Island and Coastal Archaeology* edited by Victor D Thompson and Scott M Fitzpatrick

Strategies for Survival Michael A. Jochim,2013-09-11 *Strategies for Survival Cultural Behavior in an Ecological Context* focuses on the

ecological relationships between cultural behavior and its environmental context The proliferation of ecological studies within anthropology suggests the increasing emphasis given to the systemic context of behavior The aim of this book is to develop a framework for examining these relationships and for comparing diverse ecological studies within a coherent conceptual structure It seeks to include any aspect of behavior to investigate the links between ideological and material factors to broaden the view of relevant factors and possible assumptions and to relate the processes of decision making to their specific context in a manner allowing cross cultural comparisons In the process certain popular forms of ecological explanation will be examined In addition specific behavioral examples will be investigated in an attempt to explain patterns of similarities and differences This book is addressed to all individuals interested in human environmental interactions including professional anthropologists and general students of human behavior

Environmental Adaptation and Eco-cultural Habitats Johannes Schubert, 2015-10-23 In this challenging and highly original book the author tackles the dynamic relationships between physical nature and societies over time It is argued that within each eco cultural habitat the relationship between physical nature and society is mediated by specific entanglements between technologies institutions and cultural values These habitat specific entanglements are neither ecologically nor culturally predetermined but result from mutual adaptation based on variation trial and error and selection It is shown how a variety of eco cultural habitats evolves from this coevolutionary process The book explores how these varieties come into being and how their specific characteristics affect the capacity to cope with environmental or social problems such as flooding or unemployment There are two case studies illustrating the potential of a coevolutionary understanding of the society nature nexus In the first rural and urban settlement structures are conceptualized as distinct paths of eco cultural adaptation It is shown that each of these paths is characterized by predictable spatial correspondences between dwelling technologies modes of social reproduction cultural preferences and related patterns in energy consumption i e social metabolism The second case study deals with flood protection in liberal and coordinated eco welfare and production regimes drawing on lessons from the Netherlands and Hurricane Katrina in New Orleans As a contribution to theory in environmental sociology the coevolutionary perspective developed provides deeper insights into the intricate interplay between physical and social nature

Evolutionary Perspectives on Environmental Problems Iver Myrsetrud, 2017-07-05 The twenty first century presents an increasing number of environmental problems including toxic pollution global warming destruction of tropical forests extinction of biological diversity and depletion of natural resources These environmental problems are generally due to human behavior namely over consumption of resources and overpopulation Designing effective policies to address these problems requires a deep understanding of human behavior as well as ecology This in turn requires considerations of human nature and the evolutionary design of the human mind Evolutionary research on human behavior has profound implications for the environmental sciences The aim of this collection is to bring together a variety of chapters that show how and why Part 1

Human Nature and Resource Conservation addresses environmental problems from different evolutionary perspectives Part 2 The Ecological Noble Savage Hypothesis examines the notion that our environmental problems are due to Western culture and that our ancestors and people in indigenous societies lived in harmony with nature until the corrupting influences of Western culture Part 3 The Tragedy of the Commons explores the conservation of common pool or open access natural resources such as fisheries forests grazing lands freshwater and clean air Part 4 The Evolution of Discounting and Conspicuous Consumption looks at the problem of explaining why people are so ecologically short sighted and why people in developed countries consume so many resources Part 5 Overpopulation and Fertility Declines addresses the evolution of human reproductive decisions Part 6 Biophilia aims to explain why people cherish nature as well as destroy it The goal of this volume is to introduce environmental thinkers to evolutionary perspectives on human behavior and the new interdisciplinary sciences of evolutionary psychology and behavioral ecology This reader aims to help bridge Intersecting Health,

Livability, and Human Behavior in Urban Environments González-Lezcano, Roberto Alonso, 2023-05-03 The promotion of sustainable urban development and livable cities in the past three decades has effectively merged the themes of urban health urban sustainability and urban livability into an integrated research field As more people are predicted to live in a relatively confined space the balance between the physical built environment social environment and urban dwellers becomes more delicate Urban systems have evolved to be more complex than ever during this process While complex systems often offer relative stability delicate balance requires carefully designed plans and management to avoid collapse It is hence of great interest and importance to know what future sustainable and livable cities look like Intersecting Health Livability and Human Behavior in Urban Environments considers how to improve the quality of the environment and healthy living in contemporary and future urban environments Covering key topics such as environmental health smart cities and urban health this premier reference source is ideal for policymakers government officials scholars researchers academicians instructors and students

Explaining Human Actions and Environmental Changes Andrew P. Vayda, 2009-05-15 In this collection of recent essays Andrew P Vayda argues for a pragmatic approach to explanation and explanation oriented research in social and environmental sciences He supports his arguments with causal analyses of both human actions such as cutting down trees and fighting over resources and environmental changes such as forest fires and he voices his opposition to methodological and ethnographic holism and the notion that explanation can be achieved by deploying theories rather than by obtaining evidence of the causal histories of concrete actions and events Vayda is critical of much recent scholarship in such areas as political ecology local knowledge studies discourse studies and evolutionary human behavioral ecology for its indifference to questions of evidence and methodology and its failure to give proper consideration to multiple and alternative possible causes of whatever is being explained He also discusses the use and misuse of evidence and generalizations the payoffs and pitfalls of moving from one level of analysis to another the dos and don ts in interdisciplinary research the uses of statistics

and the importance of being clear about objects of explanation This original and challenging work makes sense of the future of ecological anthropology and will be of interest to researchers in the social and environmental sciences in general

Human Behavioral Ecology Jeremy Koster,Brooke Scelza,Mary K. Shenk,2024-03-14 Human behavioral ecology HBE applies the principles of evolutionary theory and optimisation to the study of human behavioural and cultural diversity Among other things HBE attempts to explain variation in behaviour as adaptive solutions to the competing life history demands of growth development reproduction parental care and mate acquisition This book is a comprehensive introduction to the theoretical orientation and specific findings of HBE It consolidates the insights of evolution and human behaviour into a single volume that reflects the current state and future of the field It brings together leading scholars from across the evolutionary social sciences to provide a comprehensive and thought provoking review of the state of the topic Throughout the authors explain the latest developments in theory and highlight critical debates in the literature while also engaging readers with ethnographic insights and field based studies that remain at the core of human behavioral ecology

Environmental Archaeology Elizabeth Reitz,Myra Shackley,2012-06-05 One of the most significant developments in archaeology in recent years is the emergence of its environmental branch the study of humans interactions with their natural surroundings over long periods and of organic remains instead of the artifacts and household items generally associated with sites With the current attention paid to human responsibility for environmental change this innovative field is recognized by scientists conservation and heritage managers and policymakers worldwide In this context comes *Environmental Archaeology* by Elizabeth Reitz and Myra Shackley updating the seminal 1981 text *Environmental Archaeology* by Myra Shackley Rigorously detailed yet concise and accessible this volume surveys the complex and technical field of environmental archaeology for researchers interested in the causes consequences and potential future impact of environmental change and archaeology Its coverage acknowledges the multiple disciplines involved in the field expanding the possibilities for using environmental data from archaeological sites in enriching related disciplines and improving communication among them Introductory chapters explain the processes involved in the formation of sites introduce research designs and field methods and walk the reader through biological classifications before focusing

on the various levels of biotic and abiotic materials found at sites including Sediments and soils Viruses bacteria archaea protists and fungi Bryophytes and vascular plants Wood charcoal stems leaves and roots Spores pollen and other microbotanical remains Arthropods molluscs echinoderms and vertebrates Stable isotopes elements and biomolecules The updated Environmental Archaeology is a major addition to the resource library of archaeologists environmentalists historians researchers policymakers anyone involved in studying managing or preserving historical sites The updated Environmental Archaeology is a major addition to the resource library of archaeologists environmentalists historians researchers policymakers anyone involved in studying managing or preserving historical sites

The Archaeology of Environmental Change Christopher T. Fisher, J. Brett Hill, Gary M. Feinman, 2022-05-24 Water management soil conservation sustainable animal husbandry because such socio environmental challenges have been faced throughout history lessons from the past can often inform modern policy In this book case studies from a wide range of times and places reveal how archaeology can contribute to a better understanding of humans relation to the environment The Archaeology of Environmental Change shows that the challenges facing humanity today in terms of causing and reacting to environmental change can be better approached through an attempt to understand how societies in the past dealt with similar circumstances The contributors draw on archaeological research in multiple regions North America Mesoamerica Europe the Near East and Africa from time periods spanning the Holocene and from environments ranging from tropical forest to desert Through such examples as environmental degradation in Transjordan wildlife management in East Africa and soil conservation among the ancient Maya they demonstrate the negative effects humans have had on their environments and how societies in the past dealt with these same problems All call into question and ultimately refute popular notions of a simple cause and effect relationship between people and their environment and reject the notion of people as either hapless victims of unstoppable forces or inevitable destroyers of natural harmony These contributions show that by examining long term trajectories of socio natural relationships we can better define concepts such as sustainability land degradation and conservation and that gaining a more accurate and complete understanding of these connections is essential for evaluating current theories and models of environmental degradation and conservation Their insights demonstrate that to understand the present environment and to manage landscapes for the future we must consider the historical record of the total sweep of anthropogenic environmental change

The Ecosystem Concept In Anthropology Emilio F Moran, Susan H Lees, 2019-09-06 Critics of the ecosystem concept have noted the tendency of ecosystem based studies to overemphasize energy flow to rely on functionalist assumptions to neglect historical and evolutionary factors and to overlook the role of individuals as the locus of natural selection and decision making In this volume leading figures in the study of biological and human ecology evaluate these criticisms and propose ways to advance the state of knowledge in ecological research

Environmental Problems in America's Garden of Eden Gordon Morris Bakken, Brenda Farrington, 2001 This anthology examines Love s Labours Lost

from a variety of perspectives and through a wide range of materials. Selections discuss the play in terms of historical context, dating and sources, character analysis, comic elements and verbal conceits, evidence of authorship, performance analysis and feminist interpretations. Alongside theater reviews, production photographs and critical commentary, the volume also includes essays written by practicing theater artists who have worked on the play. An index by name, literary work and concept rounds out this valuable resource.

Environment and Culture Irwin Altman, Joachim F. Wohlwill, 1980-04-30 Following upon the first two volumes in this series which dealt with a broad spectrum of topics in the environment and behavior field ranging from theoretical to applied and including disciplinary, interdisciplinary and professionally oriented approaches, we have chosen to devote subsequent volumes to more specifically defined topics. Thus Volume Three dealt with Children and the Environment seen from the combined perspective of researchers in environmental and developmental psychology. The present volume has a similarly topical coverage dealing with the complex set of relationships between culture and the physical environment. It is broad and necessarily eclectic with respect to content, theory, methodology and epistemological stance, and the contributors to it represent a wide variety of fields and disciplines including psychology, geography, anthropology, economics and environmental design. We were fortunate to enlist the collaboration of Amos Rapoport in the organization and editing of this volume as he brings to this task a particularly pertinent perspective that combines anthropology and architecture. Volume Five of the series, presently in preparation, will cover the subject of behavioral science aspects of transportation.

Irwin Altman, Joachim F. Wohlwill ix Contents Introduction 1 CHAPTER 1 CROSS CULTURAL ASPECTS OF ENVIRONMENTAL DESIGN AMOS RAPOPORT Introduction 7 Culture 9 Environmental Design 10 The Relationship of Culture and Environmental Design 15 The Variability of Culture Environment Relations 19 Culture Specific Environments 26 Designing for Culture 30 Implications for the Future 39 References 42 CHAPTER 2 CROSS CULTURAL RESEARCH METHODS STRATEGIES PROBLEMS APPLICATIONS RICHARD W. Environmental Social Sciences Ismael Vaccaro, Eric Alden Smith, Shankar Aswani, 2010-11-11 The relationship between human communities and the environment is extremely complex. In order to resolve the issues involved with this relationship, interdisciplinary research combining natural sciences, social sciences and humanities is necessary. In this 2010 book, specialists summarise methods and research strategies for various aspects of social research devoted to environmental issues. Each chapter is illustrated with ethnographic and environmental examples ranging from Australia to Amazonia, from Madagascar to the United States and from prehistoric and historic cases to contemporary rural and urban ones. It deals with climate change, deforestation, environmental knowledge, natural reserves, politics and ownership of natural resources and the effect of differing spatial and temporal scales. Contributing to the intellectual project of interdisciplinary environmental social science, this book shows the possibilities social science can provide to environmental studies and to larger global problems and thus will be of equal interest to social and natural scientists and policy makers.

Environmental Change and Human Development Chris

Barrow,2014-04-04 Environmental Change and Human Development focuses on environmental change and human fortunes While there is a large and rapidly expanding literature dealing with how people affect the environment less attention has been given in recent years to how the environment shapes human development In an ever more crowded world there is a need for anticipatory environmental management and a crucial input to this is consideration of the interaction between environment and humans The environment is not as stable benign or controllable as people like to think The world population is vastly larger than it has ever been and is still growing and humans increasingly upset nature through pollution and other activities While modern communications may help environmental managers rapid travel also increases the dispersal of diseases and pests Technological advance and social development is not all beneficial some innovations have the effect of making people more vulnerable to disruption by natural disaster and citizens are often less able to cope with changed conditions than people were in the past Environmental Change and Human Development addresses key issues such as soil degradation natural climatic variations and volcanic activity and provides geography and earth sciences students with an essential introduction to the major debates surrounding this topic , **Time Resources, Society and Ecology** Tommy Carlstein,2019-09-18 Originally published in 1982 Time Resources Society and Ecology examines and seeks to examine the time dimension in terms of the ecology technology social organization and spatial structure of the human habitat Approaches to time resources sociological time budget studies anthropological activity analysis and economic analysis of money allocation have been limited by their sectoral scope or their failure to relate effectively to the processes of social interaction technological change and environmental structure In this book the book s articulation of time resources is developed in a general theoretical framework of action and interaction in time and space The book examines constraints and possibilities facing preindustrial societies and throws light on the impact of technology on modern societies Basic models of time allocation are presented and finally a cross cultural comparison is made of the mobilization of time resources in preindustrial societies Geographers social anthropologists and human ecologists should find this work directly relevant to their interest in understanding the interactions between man and environment **Human Ecology - Biology and Cultural Dimensions** Mr. Rohit Manglik,2023-11-23 Human ecology with biological and cultural focus Includes environmental interactions adaptations and sustainability key for anthropological studies
