Environmental And Resource Policy For Consumer Durables:

Environmental and Resource Policy for Consumer Durables, 2012-08-29 *Environmental Health Perspectives*, 2004 **Equity and Efficiency Considerations of Public Higher Education** Salvatore Barbaro, 2005-12-16 It has become part of the conventional wisdom in the economics of education that subsidies to higher education have a regressive distributional effect Given that relatively more children from wealthier families enroll in higher education many economist assume that these subsidies to higher education have an unwanted distributional impact This volume presents new empirical evidence for the cross sectional point of view and provides an analytical framework for the longitudinal perspective The present volume also analyzes the equity and efficiency effects of widely discussed funding reforms and proposes a voluntary graduate tax

The Complex Networks of Economic Interactions Akira Namatame, Taisei Kaizouji, Yuuji Aruka, 2006-03-09 Understanding the mechanism of a socio economic system requires more than an understanding of the individuals that comprise the system It also requires understanding how individuals interact with each other and how the aggregated outcome can be more than the sum of individual behaviors This book contains the papers fostering the formation of an active multi disciplinary community on socio economic systems with the exciting new elds of age based modeling and econophysics We especially intend to increase the awareness of researchers in many elds with sharing the common view many economic and social activities as collectives of a large scale heterogeneous and interacting agents Economists seek to understand not only how individuals behave but also how the interaction of many individuals leads to complex outcomes Age based modeling is a method for studying socio economic systems exhibiting the following two properties 1 the system is composed of interacting agents and 2 the system exhibits emergent properties that is properties arising from the interactions of the agents that cannot be deduced simply by aggregating the properties of the system's components When the interaction of the agents is contingent on past experience and especially when the agents continually adapt to that experience mathematical analysis is typically very limited in its ability to derive the outcome

Economic Dynamics and Information Jaroslav Zajac, 2007-08-01 This book analyzes the existence of equilibria in economies having a measured space of agents and a continuum of agents and commodities Excessive homogeneity with respect to agent productivity leads to instability and non uniqueness of a given stationary state and the indeterminacy of the corresponding stationary state equilibrium Sufficient heterogeneity leads to global saddle path stability uniqueness of a given stationary state and the global uniqueness of the corresponding equilibrium

The Knowledge Ahead Approach to Risk Robin Pope, Johannes Leitner, Ulrike Leopold-Wildburger, 2006-11-23 This book is written for those seeking a decision theory appropriate for use in serious choices such as insurance It employs stages of knowledge ahead to track satisfactions and dissatisfactions From experimental and questionnaire data people take into account such stages of knowledge ahead satisfactions and dissatisfactions This means we must go beyond standard decision theories like expected utility or cumulative prospect theory

Preferences in Negotiations Henner Gimpel, 2007-06-08 The attachment effect can hinder effective negotiation Parties are influenced by their subjective expectations formed on account of the exchange of offers they form reference points and loss aversion potentially leads to a change of preferences when expectations change This book presents a motivation formalization and substantiation of the attachment effect The results can be used for prescriptive advice to negotiators

Complex Systems Approach to Economic Dynamics Abraham C.-L. Chian, 2007-07-13 Economic Systems exhibit complex dynamics evidenced by large amplitude and aperiodic fluctuations in economic variables such as foreign exchange rates and stock market prices indicating that these systems are driven far from the equilibrium Characterization of the complex behavior of economic cycles by identifying regular and irregular patterns and regime switching in economic time series is the key for pattern recognition and forecasting of economic cycles Statistical analysis of stock markets and foreign exchange markets has demonstrated the intermittent nature of economic time series A nonlinear model of business cycles is able to simulate intermittency arising from order chaos and chaos chaos transitions This monograph introduces new concepts of unstable periodic orbits and chaotic saddles which are unstable structures embedded in a chaotic attractor responsible for economic intermittency

A Structural Framework for the Pricing of Corporate Securities Michael Genser, 2006-01-20 A treatment of structural credit risk models for simultaneous and consistent pricing of corporate securities This book takes us from the economic principles of firm value models to the empirical implementation through the development of an economic framework It provides exposition of corporate securities pricing for academics and practitioners

Topics in Dynamic Model Analysis Mario Faliva, Maria Grazia Zoia, 2006-01-20 Classical econometrics which plunges its roots in economic theory with simultaneous equations models SEM as offshoots and time series econometrics which stems from economic data with vector autoregressive VAR models as offsprings scour like the Janus's facing heads the flowing of economic variables so as to bring to the fore their autonomous and non autonomous dynamics It is up to the so called final form of a dynamic SEM on the one hand and to the so called representation theorems of unit root VAR models on the other to provide informative closed form expressions for the trajectories or time paths of the economic variables of interest Should we look at the issues just put forward from a mathematical standpoint the emblematic models of both classical and time series econometrics would turn out to be difference equation systems with ad hoc characteristics whose solutions are attained via a final form or a representation theorem approach The final form solution algebraic technicalities apart arises in the wake of classical difference equation theory displaying besides a transitory autonomous component an exogenous one along with a stochastic nuisance term This follows from a properly defined matrix function inversion admitting a Taylor expansion in the lag operator because of the assumptions regarding the roots of a determinant equation peculiar to SEM specifications

Consumption Structure and Macroeconomics Reto Foellmi, 2006-03-30 This book offers a novel perspective that allows to incorporate changing consumption and production structure into models of economic growth Starting from the

empirical observation that income and consumption structure are closely related it develops a tractable theoretical framework which enables to analyze macroeconomic models consistent with these empirical facts As a result central macroeconomic phenomena are better understood the reasons behind long run growth structural change and the influence of inequality on innovations and growth

Agent-Based Modeling Norman Ehrentreich,2007-10-30 This book reconciles the existence of technical trading with the Efficient Market Hypothesis By analyzing a well known agent based model the Santa Fe Institute Artificial Stock Market SFI ASM it finds that when selective forces are weak financial evolution cannot guarantee that only the fittest trading rules will survive Its main contribution lies in the application of standard results from population genetics which have widely been neglected in the agent based community

Strategic Closed-Loop Supply Chain Management Baptiste Lebreton,2006-11-22 Closed loops depict supply chains for which Original Equipment Manufacturer reintegrate their returned products into their own production network While the reverse logistics research has extensively addressed the technical aspects of product reintegration very few insights are available on whether OEMs should commit themselves to a closed loop The structure of the monograph is aligned to the decision making process of Original Equipment Manufacturers willing to investigate the potential of closed loops This decision making process is structured around fundamental questions managers are expected to answer prior to running a circular supply chain Does a closed loop fit with the corporate objectives Is it profitable to run a closed loop How should OEMs deal with free riders competition Which product technology location setup leads to a profit maximizing supply chain The planning framework is finally applied to two case studies from the tire and the computer industry

Market-Conform Valuation of Options Tobias Herwig,2006-01-17 The focus of this volume is on the development of new approaches for the market conform valuation of newly issued derivatives The first chapter presents a flexible approach to construct the binomial process of the underlying asset price by using a simultaneously backward and forward induction algorithm This framework can be used to price and hedge a wide range of plain vanilla and exotic options In the second chapter this new approach is compared to existing models using a sample of plain vanilla options American call options and European Barrier options from two competing markets In the third chapter new methods to value American style options via Monte Carlo simulations in accordance with given market prices are discussed After a short introduction to Monte Carlo methods two new approaches are proposed These new frameworks are illustrated via pricing examples for standard American put options

Strategic Trading in Illiquid Markets Burkart Mönch,2006-01-13 The Area of Research and the Object of Investigation In this thesis we will investigate trading strategies in illiquid markets from a market microstructure perspective Market microstructure is the academic term for the branch of financial economics that investigates trading and the organization of security markets see e g Harris 2002 Historically exchanges evolved as a location where those interested in buy ing or selling securities could meet physically to transact Thus traditionally security trading was organized on exchange floors where so called dealers arranged all trades and provided

liquidity by quoting prices at which they were willing buy or sell Consequently the initial surge of the market microstructure literature focused predominantly on this type of market design which is often referred to as quote driven Nowadays the interest is shifting towards order driven markets Beginning with the Toronto Stock Exchange in the mid 1970s and increasing in frequency and scope this market structure has emerged as the preeminent form of security trading worldwide In order driven markets exchanges arrange trades by matching public orders often by employing automatic execution systems Introduction A major difference between a quote driven and an order driven market arises from the transparency pre and post trade The pre trade transparency concerns the question whether the order book is visible to the keeper only or whether it is open to the public

Vector Optimization Guang-ya Chen,Xuexiang Huang,Xiaogi Yang,2005-07-13 This book is devoted to vector or multiple criteria approaches in optimization Topics covered include vector optimization vector variational inequalities vector variational principles vector minmax inequalities and vector equilibrium problems In particular problems with variable ordering relations and set valued mappings are treated The nonlinear scalarization method is extensively used throughout the book to deal with various vector related problems The results presented are original and should be interesting to researchers and graduates in applied mathematics and operations research Readers will benefit from new methods and ideas for handling multiple criteria decision problems

International Trade and Multinational Activity Julian Emami Namini,2006-10-28 During the last 25 year the neoclassical Heckscher Ohlin trade theory has been extended to the new trade theory by including imperfect competition and fixed costs into the analysis of trade relations Furthermore these micro oriented trade models are increasingly used to analyze macro oriented questions Chapter 2 of this study investigates the dynamic welfare effects of exposure to trade in a new trade model which is extended by firm heterogeneity It is analyzed under which conditions exposure to trade with firm heterogeneity increases or decreases steady state welfare of a country Chapter 3 uses a new trade model to explore which country specific conditions give rise to horizontal or vertical multinational activity Finally chapter 4 combines the Heckscher Ohlin model and a new trade model with horizontal multinational firms with the macro oriented real business cycle model and analyzes the role of goods trade and horizontal multinational firms in international business cycle transmission

Fuzzy Portfolio Optimization Yong Fang,Kin Keung Lai,Shouyang Wang,2008-09-20 Most of the existing portfolio selection models are based on the probability theory Though they often deal with the uncertainty via probabilistic approaches we have to mention that the probabilistic approaches only partly capture the reality Some other techniques have also been applied to handle the uncertainty of the financial markets for instance the fuzzy set theory Zadeh 1965 In reality many events with fuzziness are characterized by probabilistic approaches although they are not random events The fuzzy set theory has been widely used to solve many practical problems including financial risk management By using fuzzy mathematical approaches quantitative analysis qualitative analysis the experts knowledge and the investors subjective opinions can be better integrated into a portfolio selection model The contents of this

book mainly comprise of the authors research results for fuzzy portfolio selection problems in recent years In addition in the book the authors will also introduce some other important progress in the eld of fuzzy portfolio optimization Some fundamental issues and problems of po folioselectionhavebeenstudiedsystematicallyandextensivelybytheauthors to apply fuzzy systems theory and optimization methods A new framework for investment analysis is presented in this book A series of portfolio sel tion models are given and some of them might be more e cient for practical applications Some application examples are given to illustrate these models by using real data from the Chinese securities markets *Microeconomic Evaluation of Labour Market Policies* Marco Caliendo,2006-03-30 Provides an overview of the microeconomic evaluation methods for evaluation of labour market and other public policies This book focuses on the propensity score matching method and gives guidance for its implementation It uses this method to evaluate the employment effects of job creation schemes on the participating individuals in Germany *Nonlinear Dynamics and Heterogeneous Interacting Agents* Thomas Lux,Stefan Reitz,Eleni Samanidou,2006-06-06 Economic application of nonlinear dynamics microscopic agent based modelling and the use of artificial intelligence techniques as learning devices of boundedly rational actors are among the most exciting interdisciplinary ventures of economic theory over the past decade This volume provides us with a most fascinating series of examples on complexity in action exemplifying the scope and explanatory power of these innovative approaches
