Environmental Economics for Non-economists John Asafu-Adjaye, 2005 Provides an introduction to the concepts of environmental economics **Fight for the Bay** Howard R. Ernst, 2009-11-16 In this important new book on the declining health of one of America s leading environmental treasures Howard Ernst reveals a Chesapeake bay that has become functionally dead He argues that the Chesapeake Bay succumbed to a light green environmental movement that has too often adopted a philosophy of compromise over confrontation and that has fueling a political dead zone where political leaders posture but fail to make the hard decisions needed to achieve real improvement in the Bay s health While blunt in his evaluation of past and present failures to restore the Bay Ernst believes that there is still time to turn the restoration effort around and sets out new dark green strategies to do so In the concluding chapter five long time bay activists provide first person accounts of their battles and hopes for the future Hailed by Robert F Kennedy Jr as a must read for anyone concerned about environmental protection this challenging book provides a wake up call for everyone concerned about the future of the Chesapeake Bay and other ecological treasures through out America **A Primer on Environmental Sciences** Matthew

Environmental Decision-Making in Context Chad J. McGuire, 2017-09-25 Because of the complexity involved in understanding the environment the choices made about environmental issues are often incomplete In a perfect world those who make environmental decisions would be armed with a foundation about the broad range of issues at stake when making such decisions Offering a simple but comprehensive understanding of the critical roles science economics and values play in making informed environmental decisions Environmental Decision Making in Context A Toolbox provides that foundation The author highlights a primary set of intellectual tools from different disciplines and places them into an environmental context through the use of case study examples The case studies are designed to stimulate the analytical reasoning required to employ environmental decision making and ultimately help in establishing a framework for pursuing and solving environmental questions issues and problems They create a framework individuals from various backgrounds can use to both identify and analyze environmental issues in the context of everyday environmental problems The book strikes a balance between being a tightly bound academic text and a loosely defined set of principles It takes you beyond the traditional pillars of academic discipline to supply an understanding of the fundamental aspects of what is actually involved in making environmental decisions and building a set of skills for making those decisions

The Curse of Natural Resources Sevil Acar, 2017-02-20 This book examines the paradox that resource rich countries often struggle to manage their resources in a way that will help their economies thrive It looks at how a country s political regime and quality of governance can determine the degree to which it benefits or suffers from having natural resources shifting away from the traditional focus on economic growth data to study the complex implications of these resources for human well being and sustainable development To this end Acar examines a panel of countries in terms of the effects of their natural resources on human development and genuine saving which is a sustainability indicator that takes into account the welfare of future generations by incorporating the changes in different kinds of capital Acar finds that the exportation of agricultural raw materials is associated with significant deterioration in human development while extractive resource exports such as energy and minerals have negative implications for genuine savings Next the book compares the development path of Norway before and after discovering oil

contrasting it with Sweden's development. The two countries which followed almost identical paths until the 1970s diverged significantly in terms of per capita income after Norway found oil. *Green Transportation Logistics* Harilaos N.

Psaraftis, 2015-07-13 This book examines the state of the art in green transportation logistics from the perspective of balancing environmental performance in the transportation supply chain while also satisfying traditional economic performance criteria. Part of the book is drawn from the recently completed European Union project Super Green, a three year project intended to promote the development of European freight corridors in an environmentally friendly manner. Additional chapters cover both the methodological base and the application context of green transportation logistics. Individual chapters look at the policy context, the basics of transportation emissions, Green Corridors, basics of the concept of TEN-T (Trans-European Network), Benchmarking of green corridors, the potential role of ICT (Information and Communication Technologies), Green vehicle routing, Reducing maritime CO₂ emissions via market based measures and speed and route optimization, Sulphur emissions, Lifecycle emissions, Green rail transportation, Green air transportation, Green inland navigation and possible areas for further research. Throughout the book, the goal of win-win solutions is pursued and the phenomenon of push-down/pull-up, wherein a change in one aspect of a problem can cause another troubling aspect to arise, is explored. For example, speed reduction in maritime transportation can reduce emissions and fuel costs but could require additional ships and could raise in-transit inventory costs. Or regulations to reduce sulphur emissions may ultimately increase CO₂ elsewhere in the supply chain. The book takes stock at the various tradeoffs that are at stake in the goal of greening the supply chain and looks at where balances can be struck. *Climate Change, Service Economy and Industry* Junmo
