Mamba, 2023-07-19

**HYBRIDIZED TECHNOLOGIES FOR THE TREATMENT OF MINING EFFLUENTS** The main goal of this book is to review the principles development and performances of hybridized technologies that have been used for the treatment of mine effluents Recent developments consist of the integration hybridization of technologies to achieve the effective removal of pollutants from acid mine drainage AMD effluents in a stepwise manner such as to ensure that the cost of the process is minimized and the resulting water is fit for purpose This book presents eight specialized chapters that provide a state of the art review of the different hybridized technologies that have been developed over the years for the treatment of mine effluent including AMD The successful implementation and challenges of these technologies are highlighted to give the reader a perspective on the management of such waste in the mining industry In this innovative book readers will be introduced to The limitations of passive and active treatment processes as stand alone technologies while appraising the functioning and performances of these technologies when combined to address their challenges The numerous approaches that have been considered over the years for effective combination of these technologies are explored taking into account their successful implementation at large scale as well as the long term sustainability Audience This book will be of interest to academic researchers from the fields of environment chemistry engineering mineral processing hydrometallurgy geochemistry and professionals including mining plant operators environmental managers in the industries water treatment plants managers and operators water authorities government regulatory bodies officers and environmentalists      Advanced Physicochemical Treatment Processes Lawrence K. Wang, Yung-Tse Hung, Nazih K. Shamma, 2007-11-10 The past thirty years have witnessed a growing worldwide desire that positive actions be taken to restore and protect the environment from the degrading effects of all forms of pollution air water soil and noise Because pollution is a direct or indirect consequence of waste the seemingly idealistic demand for zero discharge can be construed as an unrealistic demand for zero waste However as long as waste continues to exist we can only attempt to abate the subsequent pollution by converting it to a less noxious form Three major questions usually arise when a particular type of pollution has been identified 1 How serious is the pollution 2 Is the technology to abate it available and 3 Do the costs of abatement justify the degree of abatement achieved This book is one of the volumes of the Handbook of Environmental Engineering series The principal intention of this series is to help readers formulate answers to the last two questions above The traditional approach of applying tried and true solutions to specific pollution problems has been a major contributing factor to the success of environmental engineering and has accounted in large measure for the establishment of a methodology of pollution control However the realization of the ever increasing complexity and interrelated nature of current

environmental problems renders it imperative that intelligent planning of pollution abatement systems be undertaken
