## **Environmental Change Contemporary Problems In Geography Ser:**

**Monographic Series** Library of Congress, **Geoarchaeology** Carlos Cordova, 2018-08-30 Geoarchaeology is traditionally concerned with reconstructing the environmental aspects of past societies using the methods of the earth sciences The field has been steadily enriched by scholars from a diversity of disciplines and much has happened as the importance of global perspectives on environmental change has emerged Carlos Cordova provides a fully up to date account of geoarchaeology that reflects the important changes that have occurred in the past four decades Innovative features include the development of the human ecological approach and the impact of technology on this approach how the diversity of disciplines contributes to archaeological questions frontiers of archaeology in the deep past particularly the Anthropocene the geoarchaeology of the contemporary past the emerging field of ethno geoarchaeology the role of geoarchaeology in global environmental crises and climate change *Environment*, 1992 Environmental Issues in the Mediterranean John B. Thornes, John Wainwright, 2004-03 The Mediterranean has been subject to changing human settlement and land use patterns for millennia This book reviews both physical and social aspects of this region in relation to its environment

**Environmental Change** Frank Oldfield, 2005-08-25 Environmental Change Key Issues and Alternative Approaches describes and explains the significance of past and contemporary environmental and climatic change It outlines the conceptual framework for studies of environmental change by posing key questions and presenting the results of relevant research It provides a non specialist introduction to models in environmental change research and to the study of past environmental changes Covering the last 400 000 years special emphasis is placed on past periods of rapid warming the nature of climatic variability over the last 1000 years and the dramatic and accelerating changes in the Earth system heralded by the industrial revolution The book is extensively referenced and illustrated This book provides a balanced non specialist basis for understanding and exploring the scientific issues underlying global change for advanced undergraduates in geography environmental earth biological and ecological sciences Seeds of Empire Tom Brooking, Eric Pawson, 2010-10-05 The traditional image of New Zealand is one of verdant landscapes with sheep grazing on lush green pastures Yet this landscape is almost entirely an artificial creation As Britain became increasingly reliant on its overseas territories for supplies of food and raw material so all over the Empire indigenous plants were replaced with English grasses to provide the worked up products of pasture meat butter cheese wool and hides In New Zealand this process was carried to an extreme with forest cleared and swamps drained How why and with what consequences did the transformation of New Zealand into these empires of grass occur Seeds of Empire provides both an exciting appraisal of New Zealand s environmental history and a long overdue exploration of the significance of grass in the processes of sowing empire *Japan* Conrad Totman, 2014-01-30 From the outset society in Japan has been shaped by its environmental context The lush green mountainous archipelago of today with its highly productive lowlands supports a population of more than 127 million people

and one of the most advanced economies in the world How has this come about and at what environmental cost Conrad Totman one of the world's foremost scholars on Japanese here provides a comprehensive and detailed account of the country's environmental history from its beginnings to the present day Professor Totman traces the country's development through successive historical phases as early agricultural society based on non-intensive forms of cultivation gave way to more intensified forms With each stage came greater utilisation of natural resources but a steady reduction in the richness of the indigenous biosystem By the late seventeenth century the country was well on the way to ecological disaster Yet Japan's isolation in the seventeenth and eighteenth centuries led to an unusually enlightened set of environmental policies and the system of regenerative forestry brought in during the Tokugawa period prevented certain devastation of the country's forests At the end of the nineteenth century however the country began to go to the opposite extreme as industrialisation brought with it a period of unprecedented change Growth and diversification led to a surge in environmental pollution as it became necessary to look beyond the country's domestic natural resources to meet the demand for foodstuffs fossil fuels and the raw materials necessary to an advanced industrial economy The population was particularly badly affected and some of the problems that emerged especially from the 1960s onwards provided important test cases not just for Japan but worldwide What makes the Japanese story particularly instructive is that the country's boundaries are uncommonly clear and the nature timing and extent of external influences on its history are unusually identifiable The Japanese experience therefore not only yields important insights into the processes of environmental history it offers important lessons for the wider environmental history of the planet and for our understanding of current global ecological problems A work of immense erudition and reflecting a lifetime of scholarship *Japan an Environmental History* will be welcomed by all with an interest in environmental history and the historical development of Japan

**Cities** Ian Douglas, 2013-05-30 Cities are amongst our greatest creations Yet with cities now home to over half the world's population there is increasing concern over their unchecked expansion and the detrimental effect this is having on the planet This unfettered growth is affecting every ecosystem on Earth from the deepest oceans to the highest mountains as induced climate change and ever increasing demands upon the world's resources take effect As the pace of urbanisation quickens how can we make the world's cities more sustainable Ian Douglas tells the story of cities He shows why they exist how they have evolved and the problems they have encountered revealing how from the very beginning environmental management played a key role in urban life He addresses specific problems such as noise and air pollution water supply and waste management as well as the vulnerability of cities to hazards such as earthquakes and flooding And he considers strategies to make cities more sustainable and help them adapt to climate change such as waste recycling energy conservation dual water systems sustainable housing as well as initiatives to retrofit existing cities Written by an acknowledged international authority this unique volume will be welcomed by students and specialists in environment planning geography ecology and the built environment
