Re-Thinking Green Robert Higgs, 2005-07-15 Environmental quality has been a major public concern since the first Earth Day in 1970 yet the maze of environmental laws and regulations enacted since then has fostered huge government bureaucracies better known for waste and failure than for innovation and success Can we do better than this failed environmental bureaucracy The noted contributors to this volume answer with a resounding yes Re Thinking Green exposes the myths that have contributed to failed environmental policies and proposes bold alternatives that recognize the power of incentives and the limitations of political and regulatory processes It addresses some of the most hotly debated environmental issues and shows how entrepreneurship and property rights can be utilized to promote environmental quality and economic growth Re Thinking Green will challenge readers with new paradigms for resolving environmental problems stimulate discussion on how best to humanize environmental policy and inspire policymakers to seek effective alternatives to

environmental bureaucracy EPA Journal ,1987 **From conflict to collaboration in natural resource management**

Rottinger, L.,Janáen, A.,Knupp, C.,Griestop, L., Natural resource management is closely linked to conflict management prevention and resolution Managing natural resources involves reconciling diverging interests that often lead to conflict which can undermine management institutions and lead to exploitation environmental destruction and deteriorating livelihoods If conflicts turn violent they can rip apart the entire fabric of society Thus managing conflicts in a peaceful manner is decisive not only for successful and sustainable resource management but for societal stability in general Despite this connection the knowledge and experience gained in the fields of conflict transformation and peacebuilding in the last decades are often not used by natural resource managers One reason is that this knowledge has not been translated into user friendly resources that can be easily understood by practitioners without prior experience in these fields This handbook and toolkit helps fill this gap providing an orientation to the issues and a suite of practical exercises and tools to support participatory processes Altered Environments Jeffrey Pompe,2012-11-26 An illustrated history of how natural and human forces have shaped the development of a coastal community The constant assault of natural forces make fragile barrier islands some of the most rapidly changing locations in the world but human activities have had enormous impact on these islands as well In *Altered Environments* Jeffrey and Kathleen Pompe explore the complex interactions between nature and human habitation on the resilient Outer Banks of North Carolina The Pompes employ modern and historical photographs and maps to illustrate the geographic and ecologic changes that have taken place on the Outer Banks evaluating efforts to preserve these lands and also meet the evolving needs of a growing population The Pompes examine the various forces that have created an environment so very different from the Outer Banks of only a few decades ago The defining event in the reshaping of the islands for expanded development was the dune construction project of the 1930s when the Civilian Conservation Corps constructed a wall of self sustaining dunes along 125 miles of Outer Banks shoreline in an effort to stave off beach erosion This event created a historical demarcation in conservation efforts and heralded the beginning of a period of rapid economic development for the Outer Banks The construction project reshaped the islands geography to accomplish perceived economic advantages and prepared the Outer Banks for the last half of the twentieth century when tourists increasingly visited this shore bringing corresponding developments in their wake The dune restoration project is just one of the Pompes examples of how human actions have altered the islands to meet the demands of a growing number of visitors and residents While *Altered Environments* focuses on the Outer Banks the narrative also considers social environmental and economic issues that are relevant to much of the seashore Most coastal communities face similar problems such as natural disasters and shoreline erosion and in recent decades rapid population growth has exacerbated many conservation problems Real estate developments the fisheries industry tourism climate change and oil exploration all come under scrutiny in this investigation Using the Outer Banks as a case study to frame a host of environmental challenges faced along the Atlantic

seaboard today the Pompeii provide a valuable commentary on the historical context of these concerns and offer some insightful solutions that allow for sustainable communities

Charles Taylor's Ecological Conversations Glen

Lehman,2015-07-30 The author uses the work of the eminent Canadian philosopher Charles Taylor to develop a critique of those political perspectives that are based on instrumental ways to reason about the world claiming that such perspectives invariably sever the connections between the social and natural worlds

Colfer, Ravi Prabhu,2023-03-15 Focused on forest management and governance this book examines two decades of experience with Adaptive Collaborative Management ACM assessing both its uses and improvements needed to address global environmental issues The volume argues that the activation and the empowerment of local peoples are critical to addressing current environmental challenges and that this must be enhanced by linking and extending such stewardship to global and national policymakers and actors on a broader scale This can be achieved by employing ACM's participatory approach characterized by conscious efforts among stakeholders to communicate collaborate negotiate and seek out opportunities to learn collectively about the impacts of their action The case studies presented here reflect decades of experience working with forest communities in three Indonesian Islands and four African countries Researchers and practitioners who participated in CIFOR's early ACM work had the rare opportunity to return to their research sites decades later to see what has happened These authors reflect critically on their own experience and local site conditions to glean insights that guide us in more effectively addressing climate change and other forest related challenges They showcase how global and regional actors will have to work more closely with smallholders Indigenous Peoples and local communities

Lawless Capitalism Steven A. Ramirez, 2013 In this innovative and exhaustive study Steven A Ramirez posits that the subprime mortgage crisis as well as the global macroeconomic catastrophe it spawned is traceable to a gross failure of law The rule of law must appropriately channel and constrain the exercise of economic and political power Used effectively it ensures that economic opportunity isn't limited to a small group of elites that enjoy growth at the expense of many particularly those in vulnerable economic situations In *Lawless Capitalism* Ramirez calls for the rule of law to displace crony capitalism Only through the rule of law he argues can capitalism be reconstructed
