Schizophrenia Bulletin, 2008 **Evidence for Reductionist or Anti-Reductionist Approaches of Mental Processing** Francesca Strappini, Mark Couch, Antonino Carcione, Marialuisa Martelli, 2024-02-16 As scientists or clinicians we all have an implicit theory about how the mind relates to the nervous system which infuses our research and practice This theory entails what has been traditionally known as the mind body problem Intrinsically connected to the question of potentials and constraints of human and conscious artificial life it still represents an open and highly debated philosophical and empirical question The common assumption for many cognitive neuropsychologists and neuropsychiatrists is that by looking at the anatomical brain function or malfunction it is possible to predict the behavioral experience of individuals This view often called reductionism has dominated the research trajectories in neuroscience and psychiatry in the past decades *Brain-Gut Interactions* Yvette Tache, David L. Wingate, 1991-02-22 *Brain Gut Interactions* serves as a reference source and stimulus for expanded research efforts aimed at unravelling the pathophysiology of brain gut interactions Within the general framework of brain gut interactions it covers the various areas in which this growing interdisciplinary field has evolved Topics discussed in this volume include the topography and morphology of afferent and efferent connections between the gut and the medulla and hypothalamic nuclei the role of afferent and efferent pathways in the regulation of gastrointestinal function the brain's regulation of gastrointestinal secretory and motor function and the function of peripheral and central cholecystokinin in the mechanisms of satiety The final section of this book focuses on topics such as stress emesis visceral pain and brain related disorders of the intestine based on experimental and clinical data Students and investigators working with brain gut interactions gastroenterologists psychologists and psychiatrists will find this book to be an essential reference resource **The Intact and Sliced Brain** Mircea Steriade, 2001 Connecting in vitro and in vivo studies of the mammalian brain [From Neuron to Cognition via Computational Neuroscience](#) Michael A. Diseases: From Molecules to Circuits Jing-Ning Zhu,Ying Shen,Paul G. Mermelstein,2020-06-04 Movement is the basis for many forms of behaviors and is tightly controlled by a hierarchical system containing cerebral cortex basal ganglia cerebellum brainstem and spinal cord Each level of this hierarchy contributes to motor planning motor initiation motor execution and motor coordination respectively However they all receive continuous sensory inputs and generate accurate sensorimotor integrations that are necessary for both predictive and reflexive servo controls of movements The motor system contains various types of neurons with different morphological neurochemical and electrophysiological properties which are significantly dependent on many intracellular signaling molecules Interestingly these neurons are interconnected by intricate neuronal circuits for motor control and even interacted with other non motor systems to orchestrate somatic nonsomatic integration Furthermore synaptic and neural plasticity endows motor system with amazing abilities for not only motor learning but also compensation and recovery from motor diseases such as Parkinson s disease ataxias motion sickness and amyotrophic lateral sclerosis etc Therefore the motor system is of great importance for understanding information processing integrative function and neural plasticity of the central nervous system The aim of this Research Topic is to discuss the latest advances in our understanding of motor system motor control motor learning and motor diseases from molecular cellular synaptic circuit and behavioral levels especially in an integrative perspective *The Superior Colliculus/Tectum: Cell Types, Circuits, Computations, Behaviors* Karl Farrow,Tadashi Isa,Harald Luksch,Keisuke Yonehara,2019-08-16 This eBook is a collection of articles from a Frontiers Research Topic Frontiers Research Topics are very popular trademarks of the Frontiers Journals Series they are collections of at least ten articles all centered on a particular subject With their unique mix of varied contributions from Original Research to Review Articles Frontiers Research Topics unify the most influential researchers the latest key findings and historical advances in a hot research area Find out more on how to host your own Frontiers Research Topic or contribute to one as an author by contacting the Frontiers

Manji,2017-01-28 This book brings together mental health professionals and researchers to offer the most up to date information on the diagnosis treatment and research surrounding bipolar depression Its individual chapters provide valuable diagnostic information allowing clinicians to distinguish between the various mood disorders Further they review the course outcome and genetics of this highly heritable condition offer a thorough overview of the neurobiology of the disorder including what is known from neuroimaging work delineate the treatment of bipolar depression in special populations such as children and pregnant women address suicide focusing on the need for assessment during both acute and maintenance treatment with interventions appropriate to a patient s symptoms and history and cover acute and long term treatment strategies for bipolar depression including both traditional and novel therapeutics for the disorder as well as non pharmacological treatments This second edition reflects significant advances including an improved understanding of the altered neurobiology of patients suffering from bipolar depression new information on pathophysiology and genetic findings drawn from diverse studies and a discussion of the significant strides made towards improved treatment with already available and novel agents Cognitive Functioning in Schizophrenia: Leveraging the RDoC Framework Deanna M. Barch,Jared W. Young,2023-02-17 This book highlights recent research investigating psychological and neural mechanisms contributing to dysfunctional cognition in people with schizophrenia The work on cognition in schizophrenia from the past 20 years is highlighted and emphasis throughout the book is placed on utilizing the Research Domain Criterion framework Thus the book also covers animals work relevant to schizophrenia that assesses behaviors utilizing the same framework enabling mechanistic studies and highlighting potential biomarkers of function The book also includes important areas of research in the field of cognitive function in schizophrenia that have received less attention such as cognitive side effects of current treatments and olfactory based cognition Altogether the book provides a translational perspective of the most up to date research on cognition in schizophrenia to date but with identification of novel directions for research initiatives Brain and Perception Karl H. Pribram,2013-09-05 Presented as a series of lectures this important volume achieves four major goals 1 It integrates the results of the author s research as applied to pattern perception reviewing current brain research and showing how several lines of inquiry have been converging to produce a paradigm shift in our understanding of the neural basis of figural perception 2 It updates the holographic hypothesis of brain function in perception 3 It emphasizes the fact that both distributed holistic and localized structural processes characterize brain function 4 It portrays a neural systems analysis of brain organization in figural perception by computational models describing processing in terms of formalisms found useful in ordering data in 20th century physical and engineering sciences The lectures are divided into three parts a Prolegomenon outlining a theoretical framework for the presentation Part I dealing with the configural aspects of perception and Part II presenting its cognitive

aspects The appendices were developed in a collaborative effort by the author Kunio Yasue and Mari Jibu both of Notre Dame Seishin University of Okayama Japan

Dynamics of Sensory and Cognitive Processing by the Brain Theodore Melnechuk,Erol Başar,2012-12-06 In neurophysiology the emphasis has been on single unit studies for a quarter century since the sensory work by Lettwin and coworkers and by Hubel and Wiesel the central work by Mountcastle the motor work by the late Evarts and so on In recent years however field potentials and a more global approach generally have been receiving renewed and increasing attention This is a result of new findings made possible by technical and conceptual advances and by the confirmation and augmentation of earlier findings that were widely ignored for being controversial or inexplicable To survey the state of this active field a conference was held in West Berlin in August 1985 that attempted to cover all of the new approaches to the study of brain function The approaches and emphases were very varied basic and applied electric and magnetic EEG and EP ERP connectionistic and field global and local fields surface and multielectrode low frequencies and high frequencies linear and non linear The conference comprised sessions of invited lectures a panel session of seven speakers on How brains may work and a concluding survey of relevant methodologies The conference showed that the combination of concepts methods and results could open up new important vistas in brain research Included here are the proceedings of the conference

updated and revised by the authors Several attendees who did not present papers at the conference later accepted my invitation to write chapters for the book
