**Enlightenment to Enlightenment** Henri Atlan,1993-07-01 This book is a thorough and critical comparative analysis of the logic of modern scientific thought and of traditional teachings generally referred to as mythological and mystical Different rationalities with different domains of interest and legitimacy exist which should not be confused and cannot be unified in any theory of Ultimate Reality Atlan suggests they must coexist in practice although each of them presents itself as an exclusive and all encompassing truth The book introduces teachings from Jewish talmudic midrashic and kabbalist sources and text from Zen and Taoism to exemplify the kind of rationality or controlled irrationality at work in such traditional thinking

**Science and the Quest for Reality** Alfred I. Tauber,2016-07-27 Science and the Quest for Reality is an interdisciplinary anthology that situates contemporary science within its complex philosophical historical and sociological contexts The anthology is divided between firstly characterizing science as an intellectual activity and secondly defining its social role The philosophical and historical vicissitudes of science s truth claims has raised profound questions concerning the role of science in society beyond its technological innovations The deeper philosophical issues thus complement the critical inquiry concerning the broader social and ethical influence of contemporary science In the tradition of the Main Trends of the Modern World series this volume includes both classical and contemporary works on the subject

**The Lyth of Lemmings** Frank Mueller,2008-03-02 How our myths may be used to subjugate and subvert our populations What we can do about it and how we can protect ourselves This is a book that seeks collective knowledge and shared wisdom

**Rain and Resurrection How the Talmud and Science Read the World** Irun Cohen,2010-02-12 This book presents a set of essays interpreting excerpts from the Talmud that illustrate values essential to Western science It includes another set of essays interpreting the function of interpretation in the method of science to associate Talmudic and post modern concepts

Complexity Thinking: Science in the Age of Alternative Truths Cornelis Pieter Pieters,2024-04-26 Many scholars agree that we are currently living in post ideological times and that the role of religion and social ideology has become increasingly limited as a means to organise society Some even talk of a post truth era as truth itself has become suspect and public debate has become infected with terms such as fake news and alternative truths In fact in many scientific areas the notions of truth objectivity and fact are being questioned and are often even considered instruments that aim to perpetuate relationships of

power of elites This book aims to take a position in these debates by looking at the often implicit associations behind truth objectivity and fact By taking a complexity informed dialectical approach a more encompassing understanding of these concepts can be developed that both respects the formidable achievements of science while being sensitive to the critique that has been raised most notably by postmodern thought *Quintessence of Dust: The Science of Matter and the Philosophy of Mind* Harry Redner,2020-03-23 *Quintessence of Dust* by Harry Redner argues for a science of matter and a philosophy of mind based on emergence Mind emerges from matter through five essential stages quintessence Hamlet Human mind is differentiated from animal mind primarily by reference to art Homo ludens This approach draws support from Donald Edelman and other palaeoanthropologists psychologists and neurologists The emergent relation between two entities is defined as an indissoluble non identity The mind as machine thesis artificial intelligence and cognitivism are criticised The alternative emergentist approach comes close to Spinoza The book attempts a synthesis of the natural sciences social sciences and humanities based on philosophic premises I find the core of the argument as well as its exposition coherent convincing and illuminating I put *Quintessence of Dust* in the top 5% of books in the field Miguel Candel Sanmartin University of Barcelona in Thesis Eleven August 2022 **Science, Psychoanalysis, and the Brain** Shimon Marom,2015-04-30 *Science Psychoanalysis and the Brain* is an invitation to a space for dialogue where reflections on neurophysiology are expressed with and guided by depth psychology in mind a space where neurophysiology resumes its traditional humbled stance towards matters of the psyche and where the intellectual autonomy of depth psychology is acknowledged The author leads the reader through the terrain of methodological errors that have plagued recent reductive approaches paving the way for a dialogue that is based on an alternative relational approach Neurophysiology is discussed on a high level of abstraction enabling a genuine analysis of the organization of the brain through its relational interactions with the world In this dialogue where psychology provides a theoretical framework that contributes to physiology both parties benefit Neurophysiology gains important constraints and guidance in phrasing meaningful questions whilst psychology gains further motivation to crystalize its multifaceted concepts Both disciplines enrich the spectrum of metaphors available to them within their own discourses **Selected Writings on Self-organization, Philosophy, Bioethics, and Judaism** Henri Atlan,2011 During the last thirty years biophysicist and philosopher Henri Atlan has been a major voice in contemporary European philosophical and bio ethical debates In a massive oeuvre that ranges from biology and neural network theory to Spinoza s thought and the history of philosophy and from artificial intelligence and information theory to Jewish mysticism and to contemporary medical ethics Atlan has come to offer an exceptionally powerful philosophical argumentation that is as hostile to scientism as it is attentive to biology s conceptual and experimental rigor as careful with concepts of rationality as it is committed to rethinking the human place in a radically determined yet forever changing world Book Jacket **Spinoza and Contemporary Biology** Henri Atlan,2024-11-30 Published in France in 2018 Henri Atlan s book *Cours de philosophie*

biologique et cognitiviste Spinoza et la biologie actuelle Odile Jacob 2018 represents a turning point in Spinoza's interpretations of contemporary life sciences Henri Atlan is the first in this field of research of applied epistemology and ontology to effectively address contemporary questions in biology and cognitive sciences Atlan presents us with a genuine understanding of Spinoza's monism which is neither materialistic nor idealistic and with an expertise in contemporary life sciences that will open an entire new field of research in Spinoza scholarship as well as in philosophy of sciences Readers will better understand the connection between Spinoza's Ethics his ontology and epistemology and modern life sciences allowing us to rethink the relationship between ethics and modern sciences

**Finding Winnicott** Fadi Abou-Rihan, 2023-03-03 In *Finding Winnicott Philosophical Encounters with the Psychoanalytic* Fadi Abou Rihan expands upon Winnicott's category of the found object and argues that a genuine understanding of the analyst's own thought requires that it be considered in relation to that of another The essays in this collection are in dialogue with the work of Freud Deleuze and Guattari Laplanche Bonaventure Ibn Al Arabi and Huizinga these encounters showcase some of Winnicott's yet unexplored contributions to the questions of subjectivity time and language They weave psychoanalytic theory clinical vignette and key moments from the history of ideas in order to shed light on our findings regarding and indeed findings of desire on some of the playful but no less compelling ways in which the subject lives suffers understands questions and or normalizes desire Chapters span a range of topics including rationales findings and spaces and highlight the subject as not only that which finds but that which is found With clinical vignettes throughout this book is vital reading for practicing analysts as well as analysts in training and students of both philosophy and psychoanalysis

framework for the vital translation of laboratory research for educational practice Applying the Science of Learning framework to a number of different educational domains it will be an essential guide for any student or researcher in education educational psychology neuropsychology educational technology and the emergent field of neuroeducation *The Moment of Complexity* Mark C. Taylor, 2003-09 We live in a moment of unprecedented complexity an era in which change occurs faster than our ability to comprehend it With *The Moment of Complexity* Mark C Taylor offers a map for the unfamiliar terrain opening in our midst unfolding an original philosophy of our time through a remarkable synthesis of science and culture According to Taylor complexity is not just a breakthrough scientific concept but the defining quality of the post Cold War era The flux of digital currents swirling around us he argues has created a new network culture with its own distinctive logic and dynamic

**Into Complexity** Cornelis Pieters, 2010-03 The NWO programme the societal aspects of genomics has called for stronger means of collaboration and deliberative involvement between the various stakeholders of genomics research Within the project group assembled at the UH this call was translated to the lingua democratica in which the prerequisites of such deliberative efforts were put to scrutiny The contribution of this thesis has taken a more or less abstract angle to this task and sought to develop a vocabulary that can be shared amongst various stakeholders with different backgrounds interests and stakes for any complex theme although genomics has more or less been in focus throughout the research As complexity thinking is currently a theme in both the hard sciences as the social sciences and the humanities and has always been an issue for professionals this concept was pivotal in achieving such an inclusive angle However in order to prevent that complexity would become fragmented due to disciplinary boundaries it is essential that those aspects of complexity that seem to return in many discussions would be made clear and stand out with respect to the complexities of specialisation The thesis has argued that the concept of patterns applies for these aspects and they form the backbone of the vocabulary that has been developed Especially patterns of feedback have been given much attention as this concept is pivotal for many complex themes However although patterns are implicitly or explicitly used in many areas there is little methodological and philosophical underpinning of what they are and why they are able to do what they do As a result quite some attention has been given to these issues and how they relate to concepts such as information order and complexity itself From these explorations the actual vocabulary was developed including the methodological means to use this vocabulary This has taken the shape of a recursive development of a so called pattern library which has crossed disciplinary boundaries from technological areas through biology psychology and the social sciences to a topic that is typical of the humanities This journey across the divide of C P Snow's two cultures is both a test for a lingua democratica as well as aimed to demonstrate how delicate and balanced such a path must be in order to be effective especially if one aims to retain certain coherence along the way Finally the methodology has been applied in a very practical way to a current development that hinges strongly on research in genomics which is trans humanist movement

**Teaching Design For Values** Roberto

Rocco, Amy Thomas, María Novas-Ferradás, 2022-12-08 The process of identifying interpreting and implementing societal values in university education is an essential part of responsible innovation and designing for equitable inclusive and sustainable societies While there is now a well defined and growing body of research on the theory and application of designing for values or value sensitive design at present the pedagogical dimension remains underexplored Teaching Design for Values A Companion is a resource for teachers of design based disciplines who wish to foreground values more explicitly in their classes With fourteen chapters written by both TU Delft educators and international contributors the book aims to examine the concepts methods and experiences of teaching design for values within a variety of fields including urbanism engineering architecture artificial intelligence and industrial design Through its multi disciplinarity Teaching Design for Values proposes an expanded definition of design to encompass a broad range of disciplines and processes that deal generally with future imagining and future building including process management In doing so it explores the ways that values may be expressed and analysed in a variety of different pedagogical contexts

### **Mock Ritual in the Modern Era**

Reginald McGinnis, John Vignaux Smyth, 2022 Mock Ritual in the Modern Era explores the complex interrelations between ritual and mockery McGinnis and Smyth trace the evolution of mock ritual in various forms throughout the modern era as found in literary historical and anthropological texts as well as encyclopedias newspapers and films

### **Genomics and**

**Democracy** Peter Derkx, Harry Kunneman, 2013-09-01 This book addresses the ethical and political questions flowing from the vastly increased possibilities to manipulate the genetic properties of organisms including human beings Due to the great complexity of the scientific fields involved these questions are framed and answered mostly by scientific experts But the new technological possibilities and social practices connected with genetic manipulation intrude into domains that for a long time have been the provenance of religious and secular worldviews and touch upon deep seated convictions and emotions Moreover they are strongly influenced by economic and political interests As a consequence questions of scientific truth and technical control are getting more and more mixed up with questions regarding values and interests Against this background this book starts from the premise that neither clinging to the idea of value neutral disinterested science nor the complete abandonment of this idea in favour of postmodern relativism will be of much help here Instead the different contributions to this book explore the idea of a lingua democratica for the life sciences and sketch the contours of this notion by focusing on a broad range of conceptual and practical issues in the field of genomics

### **An Atheism that Is Not Humanist Emerges in**

**French Thought** Stefanos Geroulanos, 2010-03-08 French philosophy changed dramatically in the second quarter of the twentieth century In the wake of World War I and later the Nazi and Soviet disasters major philosophers such as Kojve Levinas Heidegger Koyr Sartre Merleau Ponty and Hyppolite argued that man could no longer fill the void left by the death of God without also calling up the worst in human history and denigrating the dignity of the human subject In response they contributed to a new belief that man should no longer be viewed as the basis for existence thought and ethics rather human

nature became dependent on other concepts and structures including Being language thought and culture This argument which was to be paramount for existentialism and structuralism came to dominate postwar thought This intellectual history of these developments argues that at their heart lay a new atheism that rejected humanism as insufficient and ultimately violent

**The Challenge of Complexity** Amy Heath-Carpentier, 2022-10-01 The Challenge of Complexity gathers in one volume over 32 essays by the esteemed French philosopher and sociologist Edgar Morin probably France's greatest living public intellectual The essays span six decades of his career addressing topics such as complexity sociology ecology education film biology and politics At his centenary July 2021 Morin holds honorary doctorates from over 20 universities in Europe and Latin America and recently the Centre d'Etudes Transdisciplinaires Sociologie Anthropologie Histoire at the Centre National de la Recherche Scientifique CNRS the prestigious French National Research Center was renamed the Centre Edgar Morin He is also the UNESCO Chair of Complex Thought Several university centres and institutes have been dedicated to advancing his work in Europe and Latin America He is the author of more than 80 books translated into 28 languages and the 1960 documentary Chronicle of a Summer which he co-directed with Jean Rouch has become a classic and the first example of cinema verité Morin's work on complexity is distinct from the mathematically driven science of complexity He argues for an epistemological revolution and focuses on the need to develop complex thought to address the lived complexity of an interconnected interdependent uncertain world Morin's contribution in such a wide range of disciplines has been influential because of his ability to bring complex thought to bear on seemingly diverse topics reflecting on the limitations of how they are approached and articulating a transdisciplinary way that doesn't sacrifice complexity in an effort to find an oversimplified clarity Morin illuminates the complexity and creativity of the world and of our lived experience and invites us to participate in the creative process that is existence itself A substantive overview of Morin's philosophical journey by Alfonso Montuori introduces the reader to Morin's remarkable work and life And the work is completed by a substantive Letter from Edgar Morin putting his life's work in the context of recent advances in Science and the Humanities

The Supernatural and the Circuit Riders Rimi Xhemajli, 2021-06-22 In The Supernatural and the Circuit Riders Rimi Xhemajli shows how a small but passionate movement grew and shook the religious world through astonishing signs and wonders Beginning in the late eighteenth century early American Methodist preachers known as circuit riders were appointed to evangelize the American frontier by presenting an experiential gospel one that featured extraordinary phenomena that originated from God's Spirit In employing this evangelistic strategy of the gospel message fueled by supernatural displays Methodism rapidly expanded Despite beginning with only ten official circuit riders in the early 1770s by the early 1830s circuit riders had multiplied and caused Methodism to become the largest American denomination of its day In investigating the significance of the supernatural in the circuit rider ministry Xhemajli provides a new historical perspective through his eye-opening demonstration of the correlation between the supernatural and the explosive

membership growth of early American Methodism which fueled the Second Great Awakening In doing so he also prompts the consideration of the relevance and reproduction of such acts in the American church today
