Tesi, 2000-01-01 The premise of *The Environment and Development in Africa* is that current environmental problems in sub Saharan Africa are an outcome of the continent's development activities Whether these activities have generated economic growth and raised living standards or have led to growth without overall increases in living standards or have even contributed to a decline in people's well being developments in that region have produced

effects that have degraded Africa's environment in many ways. This book presents a comprehensive and systematic analysis of the context of the environmental issues facing sub-Saharan African states. Contributors discuss the problems associated with generating the capacity to manage Africa's environmental concerns, assess the impact of economic development efforts on the region's environment, and examine various societal and policy responses to environmental problems and to development problems linked to ecological decay. This is an important book for scholars and policy advisors concerned with African studies and global environmental issues. Sustainable Environment and Development in Nigeria, 1998

Environmental Management and Sustainable Development of Cities Soji Oyeranmi, 2023-11-25. This study contends that proper urban environmental management strategies are vital to the sustainable development of cities in any country. It demonstrates that cities as drivers of sustainable development can be positive forces in support of social equality, cultural vitality, economic prosperity, and environmental sustainability. It takes a primary focus on Ibadan, Nigeria. Most cities in sub-Saharan Africa have become badly degraded. Leaders and planners rarely fully grasp the meaning of the concept of sustainable development and fail to combine their bids to achieve economic development with urban environmental management strategies. The book describes how reformation and transformation are still possible in Ibadan and elsewhere and discusses the Sustainable Ibadan Project (SIP) as a methodology to turn Ibadan into a globally competitive and sustainable city. It will be of interest to urban planners worldwide and to researchers and students of the Global South. *Handbook of Research on Environmental Policies for Emergency Management and Public Safety* Eneanya, Augustine Nduka, 2018-01-05. In a world of earthquakes, tsunamis, and hurricanes, it is evident that emergency response plans are crucial to solve problems, overcome challenges, and restore and improve communities affected by such negative events. Although the necessity for quick and efficient aid is understood, researchers and professionals continue to strive for the best practices and methodologies to properly handle these significant events. The *Handbook of Research on Environmental Policies for Emergency Management and Public Safety* is a pivotal reference source for the latest research findings on the examination of environmental policies and its interface with management and public safety from various country's perspectives, its local impacts, and global lessons. Featuring extensive coverage on relevant areas such as public-private partnership, disaster management, and natural resource management, this publication is an ideal resource for academicians, practitioners, and researchers interested in understanding the effects of environmental policies on emergency management. **Climate Change** Terence Epule, 2023-12-06. Never has the reality of climate change and its ramifications been so obvious around the world. Humankind is currently living in times when the reality of global climate change is unequivocal. The recent Intergovernmental Panel on Climate Change (AR6) report further depicts the veracity of climate change by highlighting historically changing patterns of precipitation and temperature across the world amidst heightened and varied levels of vulnerability around the world. This book is planned along the increasingly complex and daunting nature of climate change. The broad scope is intentional and

aims at eliciting scholarship from across the globe and from varied areas of climate change research. Thus as varied and broad as the intentions are so too are the book's contents. The thirteen peer-reviewed chapters are organized into four sections. Section 1 introduces the concept of climate change and other global perspectives and trends. Section 2 focuses on climate risk, resilience and vulnerability. Section 3 explores varied perspectives on climate risks, sensitivity and exposure with a focus on monitoring and assessment. Finally, Section 4 explores climate change adaptation and mitigation. The multidisciplinary nature of this book will appeal to a varied readership including governments, municipal authorities and daily grassroots users of environmental resources.

Rethinking Institutions, Processes and Development in Africa Ernest Aniche, Toyin Falola, 2021-10-18 African scholarship concerning the nexus between institutions and development is still dominated by the economic perspective of development despite the emergence of the humanistic perspective of development. The humanistic perspective is a more embracing, encompassing and comprehensive view of development than its economic counterpart and offers a better explanation of the African situation. It is essential to examine the relationships between democratic political institutions and human development. This collection examines democratic institutions and processes in post-independence Africa. The contributors examine the political institutional processes in post-colonial Africa, evaluating the workings of institutions such as education, bureaucracy, interest groups, trade unions and problems of enforcements in Africa. It also discusses the relevance of creative arts for political socialization as well as the role effects of privatization on service delivery in contemporary African societies.

Developments in Soil Classification, Land Use Planning and Policy Implications Shabbir A. Shahid, Faisal K. Taha, Mahmoud A. Abdelfattah, 2013-02-15 As the world's population continues to expand, maintaining and indeed increasing agricultural productivity is more important than ever, though it is also more difficult than ever in the face of changing weather patterns that in some cases are leading to aridity and desertification. The absence of scientific soil inventories, especially in arid areas, leads to mistaken decisions about soil use that in the end reduce a region's capacity to feed its population or to guarantee a clean water supply. Greater efficiency in soil use is possible when these resources are properly classified using international standards. Focusing on arid regions, this volume details soil classification from many countries. It is only once this information is properly assimilated by policymakers that it becomes a foundation for informed decisions in land use planning for rational and sustainable uses.
