## **Environment And Security Discourses And Practices:**

Environment and Security M. Lowi, B. Shaw, 2000-05-16 This book is based on a conference addressing the relationship between the environment and security in the post Cold War world It brings together scholars and practitioners from a variety of different disciplines and perspectives in an effort to both explore the complexities of the relationship between environmental variables and security conditions and re focus the debate within the environmental community The book combines analytical frameworks and case study material with proposals for addressing environmental challenges and enhancing the security and welfare of peoples states and regions *Environmental Change and Security Project Report*, 2002

**Security and Environment in the Mediterranean** Hans Günter Brauch, Peter H. Liotta, Antonio Marquina, Paul F. Rogers, Mohammad El-Sayed Selim, 2012-12-06 In this volume security specialists peace researchers environmental scholars demographers as well as climate desertification water food and urbanisation specialists from the Middle East and North Africa Europe and North America review security and conflict prevention in the Mediterranean They also analyse NATO s Mediterranean security dialogue and offer conceptualisations on security and perceptions of security challenges as seen in North and South The latter half of the book analyses environmental security and conflicts in the Mediterranean and environmental consequences of World War II the Gulf War the Balkan wars and the Middle East conflict It also examines factors of global environmental change population growth climate change desertification water scarcity food and urbanisation issues as well as natural disasters Furthermore it draws conceptual conclusions for a fourth phase of research on human and environmental security and peace as well as policy conclusions for cooperation and partnership in the Mediterranean in the 21st century *Security, the Environment and Emancipation* Matt McDonald, 2012-01-30 This book offers an examination of the role of emancipation in the study and practice of security focusing on the issue of environmental change The end of the Cold War created a context in which traditional approaches to security could be systematically questioned This period also saw a concerted attempt in IR to argue that environmental change constituted a threat to security This book argues that such a notion is problematic as it suggests that a universal definition of security is possible which prevents a recognition of security as a site of contestation in which a range of actors articulate alternative visions of who or what is in need of being secured If security is understood and approached in traditional terms as the territorial preservation of the nation state from external threat then it is indeed difficult to see how environmental issues would benefit from being placed on states security agenda If however security is defined in terms of the emancipation of the most vulnerable individuals from contingent structural oppressions then drawing a relationship between environmental change and security may be beneficial for redressing those environmental issues and prioritising the needs of those most at risk from the manifestations of global environmental change This book takes the limitations of contemporary approaches to the relationship between the environment and security as its starting point and seeks to do two things First it aims to illustrate

the ways in which arguments over approaches to environmental issues can be viewed as contestation over the meaning of security in particular political contexts Central here is the composition and assumptions of the dominant security discourse to emerge regarding those issues a framework of meaning for the most important forms of action on behalf of a particular group defining the terms for meaningful contestation and negotiation about security itself within that group As such the book attempts to illustrate the dynamics of competition over the meaning of security with reference to environmental issues particularly focusing on instances of political change in the dominant security discourse through which that issue is approached In the process the author points to the central role of these dominant security discourses in underpinning the most practically significant actions regarding environmental issues such as deforestation and global climate change The book employs methodological tools that enable a focus on how particular frameworks of meaning are constituted and become dominant how they provide a lens through which various issues are approached and how discourses most consistent with redressing environmental change and the suffering of the most vulnerable might come to provide the framework through which security is viewed in particular contexts This book will be of much interest to students of Critical Security Studies geography sociology IR and Political Science in general Palgrave Advances in International Environmental Politics M. Betsill, K. Hochstetler, D. Stevis, 2005-10-31 Palgrave Advances in International Environmental Politics provides a state of the art review of the major theoretical approaches and substantive debates of the field The first section reviews the historical development of international environmental politics as well as the theoretical and methodological approaches used in its study The following chapters each review the trajectory of a key research area within international environmental politics and elaborate on current approaches and debates Case studies in each chapter illuminate the main theoretical questions that emerge from the review

**Environmental Security in the Anthropocene** Judith Nora Hardt, 2017-09-22 This book provides a critical assessment of the theories and practice of environmental security in the context of the Anthropocene The work analyses the intellectual foundations the evolution and different interpretations strengths and potential of the link between environment and security but also its weaknesses incoherencies and distortions To do so it employs a critical environmental security studies analytical framework and uniquely places this analysis within the context of the Anthropocene Furthermore the book examines the practice theory divide and the political implementation of the environmental security concept in response to global environmental change and in relation to different actors It pays significant attention to the Environment and Security Initiative ENVSEC which is led by different programs of the United Nations the OSCE and until recently by the North Atlantic Treaty Organization NATO among others and has largely been overlooked in the academic literature to date The goal is to study how environmental security practice could inform and shape the environmental security theory and also to explore how conversely new theoretical insights could contribute to the enhancement of environmental security activities This book will be of great interest to students and academic scholars of Environmental Security Critical

Security Studies Green Political Theory Global Governance and International Relations in general *Environmental Security and Gender* Nicole Detraz, 2014-08-21 Over the past 20 years scholars policymakers and the media have increasingly recognized the links between both traditional and non traditional security issues and the changing condition of the global environment Concepts such as environmental security and resource conflict have been used to hint at these significant linkages While there has been a good deal of scholarly work conducted that seeks to identify the ways that actors link these concepts there has been little examination of the intersection between approaches to environmental security and gender This book explores this intersection to provide an insight into the gendered nature of both global environmental politics and security studies It examines how the issues of security and the environment are linked to theory and practice and the extent to which gender informs these discussions By adopting a feminist environmental security discourse this book provides crucial redefinitions of key concepts and offers new insights into the ways we understand security environment connections Case studies evaluate if and how environment and security discourses are being used to understand a range of environmental issues and how a feminist environmental security discourse contributes to our understanding of security environment connections This multidisciplinary volume draws on literature from the environmental sciences security studies and sociology to highlight the complex human insecurities that often accompany environmental change As conceptualizations of security continue to shift and broaden to include environmental issues and concerns it is imperative that gender informs the debate

**Environmental Security** Simon Dalby, 2002

Since the end of the Cold War environmental matters especially the international implications of environmental degradation have figured prominently in debates about rethinking security But do the assumptions underlying such discussions hold up under close scrutiny In this first treatment of environmental security from a truly critical perspective Simon Dalby shows how attempts to explain contemporary insecurity falter over unexamined notions of both environment and security Adding environmental history aboriginal perspectives and geopolitics to the analysis explicitly suggests that the growing disruptions caused by a carbon fueled and expanding modernity are at the root of contemporary difficulties Environmental Security argues that rethinking security means revisiting the question of how we conceive identities as endangered and how we perceive threats to these identities The book clearly demonstrates that the conceptual basis for critical security studies requires an extended engagement with political theory and with the assumptions of the modern subject as progressive political agent Viewed thus on a global scale the environmental security discourse raises profoundly troubling political questions as to who we are and what kind of world we are collectively making in our efforts to be secure

*Human and Environmental Security* Felix Dodds, Tim Pippard, 2013-06-17

Security has tended to be seen as based on military force yet this illusion is crumbling literally and figuratively before our eyes in the conflict zones of Iraq Afghanistan and Africa It is now clear that real human security defined by the Commission on Human Security as protecting vital freedoms can only be

achieved if the full range of issues that underpin human security including environmental integrity are addressed This ground breaking book authored by prominent international decision makers tackles the global human security problem across the range of core issues including terrorism nuclear proliferation access to water food security loss of biodiversity and climate change The authors identify the causes of insecurity articulate the linkages between the different elements of human security and outline an agenda for engaging stakeholders from across the globe in building the foundations of genuine and lasting human security for all nations and all people This is powerful necessary solution focused reading in these times of peril global conflict mass inequity and rampant environmental degradation *Facing Global Environmental Change* Hans Günter Brauch,Navnita Chadha Behera,Patricia Kameri-Mbote,John Grin,Úrsula Oswald Spring,Béchir Chourou,Czeslaw Mesjasz,Heinz Krummenacher,2009-06-04 The year 2007 could perhaps accurately be described as the year when climate change finally received the attention that this challenge deserves globally Much of the information and knowledge that was created in this field during the year was the result of the findings of the Fourth sessment Report AR4 of the Intergovernmental Panel on Climate Change IPCC which were disseminated on a large scale and reported extensively by the media This was the result not only of a heightened interest on the part of the public on various aspects of climate change but also because the IPCC itself proactively attempted to spread the findings of its AR4 to the public at large The interest generated on the scientific realities of climate change was further enhanced by the award of the Nobel Peace Prize to the IPCC and former Vice President of the US Al Gore By taking this decision in favour of a leader who has done a great deal to create awareness on c mate change and a body that assesses all scientific aspects of climate change and disseminates the result of its findings the Norwegian Nobel Committee has clearly drawn the link between climate change and peace in the world **Expanding Peace Ecology: Peace, Security, Sustainability, Equity and Gender** Úrsula Oswald Spring,Hans Günter Brauch,Keith G. Tidball,2013-11-29 This book has peer reviewed chapters by scholars from Australia Canada Germany Japan Mexico and the USA that were presented to the Ecology and Peace Commission EPC of the International Peace Research Association IPRA in November 2012 in Japan The chapters address these themes Expanding Peace Ecology Peace Security Sustainability Equity and Gender Two Discourses on Global Climate Change Impacts From Climate Change and Security to Sustainability Transition Peace Research and Greening in the Red Zone Community based Ecological Restoration to Enhance Resilience and Transitions Toward Peace Social and Environmental Vulnerability in a River Basin of Mexico Mobile Learning Rebuilding Community Through Building Communities Supporting Community Capacities Post Natural Disaster Experience Transforming Consciousness through Peace Environmental Education Building Peace by Rebuilding Community Ability Expectations and Peace and on Satoyama Sustainability and Peace Environmental Security Rita Floyd,Richard Matthew,2013-01-04 Economic development population growth and poor resource management have combined to alter the planet s natural environment in dramatic and alarming ways For over twenty years considerable

research and debate have focused on clarifying or disputing linkages between various forms of environmental change and various understandings of security At one extreme lie sceptics who contend that the linkages are weak or even non-existent they are simply attempts to harness the resources of the security arena to an environmental agenda At the other extreme lie those who believe that these linkages may be the most important drivers of security in the 21st century indeed the very future of humankind may be at stake This book brings together contributions from a range of disciplines to present a critical and comprehensive overview of the research and debate linking environmental factors to security It provides a framework for representing and understanding key areas of intellectual convergence and disagreement clarifying achievements of the research as well as identifying its weaknesses and gaps Part I explores the various ways environmental change and security have been linked and provides principal critiques of this linkage Part II explores the linkage through analysis of key issue areas such as climate change energy water food population and development Finally the book concludes with a discussion of the value of this subfield of security studies and with some ideas about the questions it might profitably address in the future This volume is the first to provide a comprehensive overview of the field With contributions from around the world it combines established and emerging scholars to offer a platform for the next wave of research and policy activity It is invaluable for both students and practitioners interested in international relations environment studies and human geography

**The Politics of Climate Change** Paul G. Harris, 2013-09-13 Climate change is now a mainstream part of the international political agenda It has become clear that it is not solely a technical issue to be resolved by scientists but a political issue with political implications at all levels of global governance Indeed some may argue that few long term problems in international affairs are more important than this one The purpose of this book is to reveal and apply some of the latest thinking on the implications of climate change for international affairs and to explore how various proposals for tackling climate change will affect interstate relations in coming years Chapters by scholars of international relations international political economy and international law contribute to current discussions of climate change doing so in way that is accessible to students stakeholders government officials and informed laypersons Some questions considered in the book include the following How has the discussion of climate change affected interstate relations How does this problem and how do environmental issues more generally challenge international relations theory How do international climate politics influence domestic politics and vice versa How would climate change or action taken to tackle it affect the balance of power or balance of influence Is climate change a matter of international security or international justice or both and how does the answer to this question affect policy responses of governments Which states are likely to benefit or suffer from the various proposals to address climate change What are the legal ethical and political implications of the uneven distribution of the impacts of climate change This book was previously published as a special issue of the Cambridge Review of International Affairs

**Globalization and Environmental Challenges** Hans Günter Brauch, Úrsula Oswald Spring, Czesław

Mesjasz, John Grin, Pál Dunay, Navnita Chadha Behera, Béchir Chourou, Patricia Kameri-Mbote, P. H. Liotta, 2008-01-23 Put quite simply the twin impacts of globalization and environmental degradation pose new security dangers and concerns In this new work on global security thinking 91 authors from five continents and many disciplines from science and practice assess the worldwide reassessment of the meaning of security triggered by the end of the Cold War and globalization as well as the multifarious impacts of global environmental change in the early 21st century      **Responding to Environmental**

**Conflicts: Implications for Theory and Practice** Eileen Petzold-Bradley, Alexander Carius, Árpád Vincze, 2012-12-06 A comprehensive tour d horizon of the debate on the environment and security focusing on the various policy options for building peace and preventing environmental conflict Experts from the areas survey the key environmental challenges in Eastern and Central European states and those of the former Soviet Union extending the debate to such regions as the Balkans the Black Sea and Central Europe This is the first time such extensive case study research has been reported for these regions Both practical and theoretical approaches to the debate are presented within a multi disciplinary framework the contributors ranging from academic experts involved with peace and conflict research to actual policy makers active in the fields of environmental and security policy Readership Experts already working in the relevant disciplines both academic and governmental as well as those seeking an introduction to the various policy fields A graduate level study text excellent survey for policy makers and an academic contribution to ongoing studies      *Environmental Security in Transnational Contexts* Harlan Koff, Carmen Maganda, 2019-10-23 Much of the discussion surrounding the definition of the Sustainable Development Goals SDGs and the post 2015 global development agenda has contextualized sustainable development within the framework of transformation specifically prioritizing concepts such as equity security justice and rights While these debates correctly discussed power imbalances and relational obstacles to human development they have remained abstract because they focused only on the international level In this regard discussions have not adequately examined mechanisms that facilitate or block the emergence of sustainable development as a political priority nor do they address specific policy proposals to link environmental justice to human development strategies This book contends that human and environmental security should be framed in terms of transnational discussions rather than being limited to general international debates in order to examine both governance challenges and potential policy mechanisms that can effectively address environmental security issues that cross national boundaries The chapters in this volume undertake an empirical examination of the relationships between human and environmental security cross border exchanges and regional integration They address the relationships between international norms transnational human and environmental security issues and the regionalization of governance in different parts of the world as the book includes comparative analyses as well as case studies from Europe Asia and the Americas The chapters originally published as a special issue in Globalizations
