## **Environmental Change And Security:**

Climate Change, Human Security and Violent Conflict Jürgen Scheffran, Michael Brzoska, Hans Günter Brauch, Peter Michael Link, Janpeter Schilling, 2012-05-26 Severe droughts damaging floods and mass migration Climate change is becoming a focal point for security and conflict research and a challenge for the world's governance structures But how severe are the security risks and conflict potentials of climate change Could global warming trigger a sequence of events leading to economic decline social unrest and political instability What are the causal relationships between resource scarcity and violent conflict This book brings together international experts to explore these questions using in depth case studies from around the world Furthermore the authors discuss strategies institutions and cooperative approaches to stabilize the climate society interaction

Security, the Environment and Emancipation Matt McDonald, 2011-08-24 This book offers an examination of the role of emancipation in the study and practice of security focusing on the issue of environmental change The end of the Cold War created a context in which traditional approaches to security could be systematically questioned This period also saw a concerted attempt in IR to argue that environmental change constituted a threat to security This book argues that such a notion is problematic as it suggests that a universal definition of security is possible which prevents a recognition of security as a site of contestation in which a range of actors articulate alternative visions of who or what is in need of being secured If security is understood and approached in traditional terms as the territorial preservation of the nation state from external threat then it is indeed difficult to see how environmental issues would benefit from being placed on states security agenda If however security is defined in terms of the emancipation of the most vulnerable individuals from contingent structural oppressions then drawing a relationship between environmental change and security may be beneficial for redressing those environmental issues and prioritising the needs of those most at risk from the manifestations of global environmental change This book takes the limitations of contemporary approaches to the relationship between the environment and security as its starting point and seeks to do two things First it aims to illustrate the ways in which arguments over approaches to environmental issues can be viewed as contestation over the meaning of security in particular political contexts Central here is the composition and assumptions of the dominant security discourse to emerge regarding those issues a framework of meaning for the most important forms of action on behalf of a particular group defining the terms for meaningful contestation and negotiation about security itself within that group As such the book attempts to illustrate the dynamics of competition over the meaning of security with reference to environmental issues particularly focusing on instances of political change in the dominant security discourse through which that issue is approached In the process the author points to the central role of these dominant security discourses in underpinning the most practically significant actions regarding environmental issues such as deforestation and global climate change The book employs methodological tools that enable a focus on how particular frameworks of meaning are constituted and become dominant

how they provide a lens through which various issues are approached and how discourses most consistent with redressing environmental change and the suffering of the most vulnerable might come to provide the framework through which security is viewed in particular contexts This book will be of much interest to students of Critical Security Studies geography sociology IR and Political Science in general      **States and Nature** Joshua W. Busby, 2022-03-24 Busby explains how

climate change can affect security outcomes including violent conflict and humanitarian emergencies Through case studies from sub Saharan Africa the Middle East and South Asia the book develops a novel argument explaining why climate change leads to especially bad security outcomes in some places but not in others      **Environmental Change and Security** Alexander Carius, Kurt M. Lietzmann, 2013-11-21 Does a connection exist between environmental degradation resource scarcity and violent conflicts Global environmental changes such as climate change and sea level rise shortage of fresh water and rapid soil degradation increasingly highlight the dimensions of environmental change in foreign and security policy To reverse these negative environmental consequences over the long term comprehensive and preventive policy approaches are urgently required This state of the art book contains numerous articles by renown German speaking experts from different scientific disciplines as well as international and European political advisors and diplomats Together they discuss the complex causes of environmentally induced conflicts and the political and societal mechanisms for conflict prevention

**Security and Environmental Change** Simon Dalby, 2013-05-08 In the early years of the new millennium hurricanes lashed the Caribbean and flooded New Orleans as heat waves and floods seemed to alternate in Europe Snows were disappearing on Mount Kilimanjaro while the ice caps on both poles retreated The resulting disruption caused to many societies and the potential for destabilizing international migration has meant that the environment has become a political priority The scale of environmental change caused by globalization is now so large that security has to be understood as an ecological process A new geopolitics is long overdue In this book Simon Dalby provides an accessible and engaging account of the challenges we face in responding to security and environmental change He traces the historical roots of current thinking about security and climate change to show the roots of the contemporary concern and goes on to outline modern thinking about securitization which uses the politics of invoking threats as a central part of the analysis He argues that to understand climate change and the dislocations of global ecology it is necessary to look back at how ecological change is tied to the expansion of the world economic system over the last few centuries As the global urban system changes on a local and global scale the world's population becomes vulnerable in new ways In a clear and careful analysis Dalby shows that theories of human security now require a much more nuanced geopolitical imagination if they are to grapple with these new vulnerabilities and influence how we build more resilient societies to cope with the coming disruptions This book will appeal to level students and scholars of geography environmental studies security studies and international politics as well as to anyone concerned with contemporary globalization and its transformation of the biosphere      Ecological Security Matt

McDonald,2021-09-23 This book argues that we should approach the relationship between climate change and security through the lens of ecosystem resilience **Global Environmental Change and Human Security** Richard A. Matthew,Jon Barnett,Bryan McDonald,Karen L. O'Brien,2009-10-09 Experts discuss the risks global environmental change poses for the human security including disaster and disease violence and increasing inequity In recent years scholars in international relations and other fields have begun to conceive of security more broadly moving away from a state centered concept of national security toward the idea of human security which emphasizes the individual and human well being Viewing global environmental change through the lens of human security connects such problems as melting ice caps and carbon emissions to poverty vulnerability equity and conflict This book examines the complex social health and economic consequences of environmental change across the globe In chapters that are both academically rigorous and policy relevant the book discusses the connections of global environmental change to urban poverty natural disasters with a case study of Hurricane Katrina violent conflict with a study of the decade long Nepalese civil war population gender and development The book makes clear the inadequacy of traditional understandings of security and shows how global environmental change is raising new unavoidable questions of human insecurity conflict cooperation and sustainable development Contributors W Neil Adger Jennifer Bailey Jon Barnett Victoria Basolo Hans Georg Bohle Mike Brklacich May Chazan Chris Cocklin Geoffrey D Dabelko Indra de Soysa Heather Goldsworthy Betsy Hartmann Robin M Leichenko Laura Little Alexander L pez Richard A Matthew Bryan McDonald Eric Neumayer Kwasi Nsiah Gyabaah Karen L O'Brien Marvin S Soroos Bishnu Raj Upreti **Climate Change and Security** Christian Webersik,2010-05-05 Human induced climate change is causing resource scarcities natural disasters and mass migrations which in turn destabilize national international and human security structures and multiply the human inputs to climate change Alarms about the expanding role of climate change as a force multiplier of existing threats to national international and human security structures studies are being raised at all levels of governance and intelligence national including the U S Senate the Director of National Intelligence the Central Intelligence Agency and the Pentagon transnational including the European Union and the United Nations and private such as the Central News Agency and the American Security Project Climate Change and Security A Gathering Storm of Global Challenges focuses on the three major feedback effects of human induced climate change on human and international security resource scarcity natural disasters and sea level rise Decreasing per capita availability of renewable resources due to such regional effects of climate change as drought and desertification leads to intensified competition for these resources and may result in armed violence especially when compounded by conditions of rapid population growth tribalism and sectarianism as in Darfur and Somalia The increase in the frequency and intensity of meteorological disasters associated with global warming weakens already debilitated tropical societies and makes them still more vulnerable to political instability as in Haiti Sea level rise will lead to disruptive mass migrations of climate refugees as dense littoral populations are forced to abandon low lying coastal regions

as in Bangladesh

**Climate Change as a Security Risk** Hans Joachim Schellnhuber, 2010-09-23

Without resolute counteraction climate change will overstretch many societies adaptive capacities within the coming decades This could result in destabilization and violence jeopardizing national and international security to a new degree However climate change could also unite the international community This is provided that we recognize climate change as a threat to humankind and so set the course for adopting a dynamic and globally coordinated climate policy If we fail to do so climate change will draw ever deeper lines of division and conflict in international relations triggering numerous conflicts between and within countries over the distribution of resources especially water and land and over the management of migration or over compensation payments between the countries mainly responsible for climate change and those countries most affected by its destructive effects With Climate Change as a Security Risk WBGU has compiled a flagship report on an issue that quite rightly is rising rapidly up the international political agenda The authors pull no punches on the likelihood of increasing tensions and conflicts in a climatically constrained world and spotlight places where possible conflicts may flare up in the 21st century unless climate change is checked The report makes it clear that climate policy is preventative security policy

The Securitisation of Climate Change Thomas Diez, Franziskus von Lucke, Zehra Wellmann, 2016-04-28 This book provides the first systematic comparative analysis of climate security discourses It analyses the securitisation of climate change in four different countries USA Germany Turkey and Mexico The empirical analysis traces how specific climate security discourses have become dominant which actors have driven this process what political consequences this has had and what role the broader context has played in enabling these specific securitisations In doing so the book outlines a new and systematic theoretical framework that distinguishes between different referent objects of securitisation territorial individual and planetary and between a security and risk dimension It thereby clarifies the ever increasing literature on different forms of securitisation and the relationship between security risk and politics Whereas securitisation studies have traditionally

focused on either a single country case study or a global overview consequently failing to reconstruct detailed securitisation dynamics this is the first book to provide a systematic comparative analysis of climate security discourses in four countries and thus closes an empirical gap in the present literature In addition this comparative framework allows the drawing of conclusions about the conditions for and consequences of successful securitisation based on empirical and comparative analysis rather than theoretical debate only This book will of interest to students of climate change environmental studies critical security global governance and IR in general

**Climate Change, Security Risks and Conflict Reduction in Africa** Charlene Cabot, 2016-11-04 Millions of people are already affected by weather related shocks every year in West Africa and climate change is highly likely to increase these threats In the wake of climate change rising temperatures increasingly irregular rainfall and more frequent natural hazards will endanger the ways of life of vulnerable population groups in this region and destabilize their human security A surge in violence and conflicts could take place One of the conflict constellations could be between farmers and herders These groups are highly vulnerable to climate change due to their dependence on natural resources Millions of people are already affected by weather related shocks every year in West Africa and climate change is highly likely to increase these threats In the wake of climate change rising temperatures increasingly irregular rainfall and more frequent natural hazards will endanger the ways of life of vulnerable population groups in this region and destabilize their human security A surge in violence and conflicts could take place One of the conflict constellations could be between farmers and herders These groups are highly vulnerable to climate change due to their dependence on natural resources for their subsistence Furthermore they are historically prone to enter into conflict over issues of access to natural resources However social economic and political circumstances fundamentally influence environmental conflicts There might thus be opportunities to face the societal challenges of climate change in a peaceful way and the political and institutional framework could play an important role in reducing conflict and violence In order to explore such a path this study analyses the potential of political factors policies and institutions for the reduction of climate change induced or aggravated conflicts between farmers and herders After a theoretical demonstration a case study of agro pastoral conflicts in Burkina Faso Cote d'Ivoire and Ghana is conducted their subsistence Furthermore they are historically prone to enter into conflict over issues of access to natural resources However social economic and political circumstances fundamentally influence environmental conflicts There might thus be opportunities to face the societal challenges of climate change in a peaceful way and the political and institutional framework could play an important role in reducing conflict and violence In order to explore such a path this study analyses the potential of political factors policies and institutions for the reduction of climate change induced or aggravated conflicts between farmers and herders After a theoretical demonstration a case study of agro pastoral conflicts in Burkina Faso Cote d'Ivoire and Ghana is conducted

**Security and Environmental Change** Simon Dalby, 2009-07-27 Simon Dalby provides an accessible and engaging account of the

challenges we face in responding to security and environmental change He traces the historical roots of current thinking about security and climate change to show the roots of the contemporary concern *Militarizing the Environment* Robert P. Marzec, 2015-12-21 As the seriousness of climate change becomes more and more obvious military institutions are responding by taking a prominent role in the governing of environmental concerns engaging in climate change war games and preparing for the effects of climate change from conflicts due to loss of food water and energy to the mass migration of millions of people displaced by rising sea levels This combat oriented stance stems from a self destructive pattern of thought that Robert P Marzec names environmentalism an attitude that has been affecting human environmental relations since the seventeenth century *Militarizing the Environment* traces the rise of this influential mindset in America and other nations that threatens to supplant ideas of sustainability with demands for adaptation In this extensive historical study of scientific military political and economic formations across five centuries Marzec reveals how environmentalism has been instrumental in the development of today's security society informing the creation of the military industrial complex during World War II and the National Security Act that established the CIA during the Cold War Now embedded in contemporary Western thought environmentalism has even infiltrated scientific thinking transforming Darwinian insights into a quasi theology that makes security the biological basis of existence Marzec exposes the self destructive nature of this increasingly accepted worldview and offers alternatives that counter the blind alleys of national and global security

**Rethinking Climate Change, Conflict and Security** Jan Selby, Clemens Hoffmann, 2017-10-02 Is global climate change likely to become a significant source of violent conflict and should it therefore be seen as a national security challenge Most Northern governments militaries think tanks and NGOs believe so as do many academic researchers on the grounds that increased temperatures changing precipitation patterns and rising sea levels will worsen existing social stresses especially within poor societies and marginal communities across Africa and Asia This book argues otherwise The first collection of its kind it brings together leading scholars of Anthropology Geography Development Studies and International Relations to provide a series of critical analyses of mainstream thinking on the climate security nexus It shows how policy discourse on climate conflict consistently misrepresents the causes of violence especially by obscuring its core political dimensions It demonstrates that quantitative research provides a flawed basis for understanding climate conflict linkages It argues that climate security discourse is in hoc with a range of questionable military authoritarian and developmental agendas And it reveals that the greening of global capitalism is already having violent consequences across the global South Climate change the book argues does indeed have serious conflict and security implications but these are quite different from how they are usually imagined This book was published as a special issue of *Geopolitics*

*Rethinking Climate Change, Security and Politics* Steven Ratuva, Mercedes Alda-Fernández, Dalila Gharbaoui, Masaki Kataoka, 2025-09-19 The book provides a critical analysis of the nexus between climate change security and politics especially in relation to the role and impact of societal agencies such as

states corporations military financial institutions and community organizations in framing and responding to climate change using various forms of social economic or political leverage Climate change is a major existential security threat to the planet and humanity yet there is continuing debate as to how it should be approached Climate Migration and Security Ingrid Boas,2015-05-01 Climate migration as an image of people moving due to sea level rise and increased drought has been presented as one of the main security risks of global warming The rationale is that climate change will cause mass movements of climate refugees causing tensions and even violent conflict Through the lens of climate change politics and securitisation theory Ingrid Boas examines how and why climate migration has been presented in terms of security and reviews the political consequences of such framing exercises This study is done through a macro micro analysis and concentrates on the period of the early 2000s until the end of September 2014 The macro level analysis provides an overview of the coalitions of states that favour or oppose security framings on climate migration It shows how European states and the Small Island States have been key actors to present climate migration as a matter of security while the emerging developing countries have actively opposed such a framing The book argues that much of the division between these states alliances can be traced back to climate change politics As a next step the book delves into UK India interactions to provide an in depth analysis of these security framings and their connection with climate change politics This micro level analysis demonstrates how the UK has strategically used security framings on climate migration to persuade India to commit to binding targets to reduce their greenhouse gas emissions The book examines how and why such a strategy has emerged and most importantly to what extent it has been successful Climate Migration and Security is the first book of its kind to examine the strategic usage of security arguments on climate migration as a political tool in climate change politics Original theoretical empirical and policy related insights will provide students scholars and policy makers with the necessary tools to review the effectiveness of these framing strategies for the purpose of climate change diplomacy and delve into the wider implications of these framing strategies for the governance of climate change **Handbook on Climate Change and International Security** Maria J. Trombetta,2023-12-11 This topical Handbook explores the emergence of climate change as an international security issue the threats it poses and the political and academic debates it has prompted Framing climate change as a security issue it explores the ways relevant actors states and international organizations have conceptualized climate security and its associated threats
