Environmental Policy Carlo Carraro, Gilbert E. Metcalf, 2009-02-15 Most people would agree that it makes sense to tax a company that pollutes in a way that directly reflects the amount of environmental and social damage it has done Yet in practice such taxes are fraught with difficulty and have far reaching implications A company facing a new tax may lay off workers for example exacerbating an unemployment problem This volume focuses on such external issues and examines in detail the trade offs involved in designing policies to deal with environmental problems Reflecting the broad nature of the subject the contributors include leading economists in the areas of public finance industrial organization and trade theory as well as environmental economists Integrating both theoretical and empirical methods they examine environmental policy design as it relates to location decisions compliance costs administrative costs effects on research and development and international factor movements Shedding light on an extraordinarily complex and important topic this collection will be of interest to all those involved in designing effective environmental policy

Environmental Policy when Market Structure and Plant Locations are Endogenous James R. Markusen, Edward R. Morey, Nancy D. Olewiler, 1991 A two region two firm model is developed in which firms choose the number and the regional locations of their plants Both firms pollute and in this context market structure is endogenous to environmental policy There are increasing returns at the plant level imperfect competition between the home and the foreign firm and transport costs between the two markets These features imply that at critical levels of environmental policy variables small policy changes cause large discrete jumps in a region's pollution and welfare as a firm closes or opens a plant or shifts production for the foreign region from the home region plant to a foreign branch plant The implications for optimal

environmental policy differ significantly from those suggested by traditional Pigouvian marginal analysis

Oligopoly, the Environment and Natural Resources Luca Lambertini, 2013-08-21 Industrial production and consumption patterns rely heavily on the intensive use of both renewable and non renewable resources and the consequences for the environment can be serious Following a long period of time where the profit incentives of firms have prevailed over preservation of the environment and the world's natural resources a new consensus has emerged concerning the need to regulate firm behaviour aimed at ensuring the sustainability of the economic system in the long run This book offers an exhaustive overview of current economic debate about these topics taking modern oligopoly theory as a benchmark The first part of the book covers static models dealing with incentives for green research and development Pigovian taxation cartels environmental quality and international trade as well as the role of corporate social responsibility public firms and consumer environmental awareness as endogenous regulatory instruments Then the author moves on to examine the role of time while drawing from optimal control and differential game theory This opens the way to the discussion of fair discount rates to ensure the welfare of future generations as well as the long run sustainability of production and consumption patterns

Import Tariffs as Environmental Policy Instruments C. Kraus, 2013-06-29 The theoretical claims for eco tariffs are rigorously analyzed within a unified framework formed of an international trade model enriched with both a domestic and a global externality During the course of the analysis the model is modified to analyze an array of contexts for which eco tariffs have been claimed to

improve environmental quality or welfare The circumstances and conditions are characterised under which such tariffs can be shown to improve environmental quality and social welfare taking account of general equilibrium effects The theoretical results are applied in a policy analysis of eco tariffs and other trade instruments in the context of domestic and global environmental policy in order to assess the relevance of the eco tariffs that have been subjected to the theoretical analysis Finally the GATT WTO rules and regulations are presented since to date these have banned the use of eco tariffs The rules and regulations are mapped against the theoretical results to show which rules ought to be changed

Handbook of Environmental Economics Karl-Goran Maler, 2005-12-09 Many of the frontiers of environmental economics research are at the interface of large scale and long term environmental change with national and global economic systems This is also where some of the most of challenging environmental policy issues occur Volume 3 of the Handbook of Environmental Economics provides a synthesis of the latest theory on economywide and international environmental issues and a critical review of models for analyzing those issues It begins with chapters on the fundamental relationships that connect environmental resources to economic growth and long run social welfare The following chapters consider how environmental policy differs in a general equilibrium setting from a partial equilibrium setting and in a distorted economy from a perfect economy The volume closes with chapters on environmental issues that cross or transcend national borders such as trade and the environment biodiversity conservation acid rain ozone depletion and global climate change The volume provides a useful reference for not only natural resource and environmental economists but also international economists development economists and macroeconomists

International Trade, Factor Movements, and the Environment Michael Rauscher, 1997 Trade and the environment has become a major area of international political dispute This study investigates the interdependencies between environmental policies and international trade policies Does liberalization of international goods and factor markets cause environmental disruption and welfare losses Will countries institute lax ecological regulations to favour their domestic producers Should trade restrictions be used for environmental reasons and can environmental policy instruments be used to achieve trade related objectives Should there be what the author terms a green GATT The approach is mainly theoretical and uses traditional trade models like Heckscher Ohlin as well

as non competitive models of the new trade theory and public choice Some other important but often neglected aspects such as trade in hazardous wastes and the foreign debt problem with the possibility of debt for nature swaps are also considered Finally International Trade Factor Movements and the Environment addresses institutional issues on both national and international levels The book will be essential reading for all international and environmental economists

Climate Change and European Leadership J. Gupta,M.J. Grubb,2013-06-29 The issue of climate change is now widely recognised as one of the major challenges for mankind in the 21st century not only because it may ultimately affect many areas of our environment nature and human activity but also because its mitigation may have far reaching consequences for almost all sectors of the economy where energy conversion takes place Although climate change is firmly positioned on the political agenda and some initial targets have been agreed within a global framework we are still far away from a mature political and practical policy which may deliver timely and appropriate results to turn the tide This is partly due to the complex nature of a possible global climate change regime the still early stage of the development of effective and efficient instruments and the wide variety of possible ramifications for individual countries and economic sectors But it is also due to the complexity of the negotiation process and the lack of effective international or even global governance and leadership to tackle a multi dimensional problem of this size and nature This book is the first broad attempt to address the issue of leadership by one of the major parties to the UN Framework Convention on Climate Change in the ongoing international debate and negotiations towards such a policy which inevitably has to be constructed on a global scale
