Environmental Conservation Raymond Fredric Dasmann, 1965 **Conservation** Monique Borgerhoff Mulder, Peter Coppelillo, 2005 Publisher Description Environmental Conservation Asish Ghosh, 2008 **Environmental Conservation** Raymond F. Dasmann (Conservationist), 1959 **Ecological Integrity** David Pimentel, Laura Westra, Reed F. Noss, 2013-04-22 Global Integrity Project has brought together leading scientists and thinkers from around the world to examine the combined problems of threatened and unequal human well being degradation of the ecosphere and unsustainable economies Based on the proposition that healthy functioning ecosystems are a necessary prerequisite for both economic security and social justice the project is built around the concept of ecological integrity and its practical implications for policy and management Ecological Integrity presents a synthesis and findings of the project Contributors including Robert Goodland James Karr Orié Loucks Jack Manno William Rees Mark Sagoff Robert Ulanowicz Philippe Crabbe Laura Westra David Pimentel Reed Noss and others examine the key elements of ecological integrity and consider what happens when integrity is lost or compromised The book examines historical and philosophical foundations of the concept of ecological integrity explores how integrity can be measured examines the relationships among ecological integrity human health and food production looks at economic and ethical issues that need to be considered in protecting ecological integrity offers concrete recommendations for reversing ecological degradation while promoting social and economic justice and welfare Contributors argue that there is an urgent need for rapid and fundamental change in the ecologically destructive patterns of collective human behavior if society is to survive and thrive in coming decades Ecological Integrity is a groundbreaking book that integrates environmental science economics law and ethics in problem analysis synthesis and

solution and is a vital contribution for anyone concerned with interactions between human and planetary health The Conservation Revolution Bram Buscher, Robert Fletcher, 2020-02-11 A post capitalist manifesto for conservation Conservation needs a revolution This is the only way it can contribute to the drastic transformations needed to come to a truly sustainable model of development The good news is that conservation is ready for revolution Heated debates about the rise of the Anthropocene and the current sixth extinction crisis demonstrate an urgent need and desire to move beyond mainstream approaches Yet the conservation community is deeply divided over where to go from here Some want to place half earth into protected areas Others want to move away from parks to focus on unexpected and new natures Many believe conservation requires full integration into capitalist production processes Building a razor sharp critique of current conservation proposals and their contradictions Buscher and Fletcher argue that the Anthropocene challenge demands something bigger better and bolder Something truly revolutionary They propose convivial conservation as the way forward This approach goes beyond protected areas and faith in markets to incorporate the needs of humans and nonhumans within integrated and just landscapes Theoretically astute and practically relevant The Conservation Revolution offers a manifesto for conservation in the twenty first century a clarion call that cannot be ignored **Virtualism, Governance and Practice** James G. Carrier, Paige West, 2009 Many scholars who examine large scale environmentalist organisations highlight the knowledge power and governance that underlie organisations policies and projects as virtualising efforts to bring the world into conformity with their environmentalist thought and vision This important collection reveals how the concerns of those critics are justified on one level but not on another The contributors not only examine how environmental organisations seek this world of conformity but also show how these organisations are constrained in their ability to achieve their goals The collection argues that the critics concern with knowledge power governance and virtualism seems justified when we look at those organisations environmentalist visions policies and programs However they are much less justified when we look at the practical operation of such organisations and their ability to generate and carry out projects intended to reshape the world Book Jacket **Protecting the Planet** Budd Titlow, Mariah Tinger, 2016 An inspirational story of pioneering environmentalists who heightened awareness regarding nature s value and heroes of today who are working to secure a sustainable future *Environmental Conservation* Raymond Frederic Dasmann, 1959 **Environmental Conservation** Dasmann, 1970-01 Cultural Landscapes and Land Use Martin Dieterich, Jan van der Straaten, 2004-06-02 Cultural landscapes are created by people and used by people but still decidedly rich in biodiversity and in harmony with nature The landscapes of fairy tales without dragons Socio economic complexity on top of biological diversity is the challenge nature conservation faces in the context of cultural landscape This book is an attempt to approach this complexity and provide a theoretical background as well as guidelines and examples for hands on solutions It draws on inputs from scientists administrators independent consultants and politicians from Europe and the United States With a particular emphasis on

agriculture it attempts to merge disciplines such as philosophy law planning economics and conservation biology toward a common goal nature conservation and the preservation of biological diversity in landscapes under the pressure of human usage

Reconstructing Conservation Ben A. Minteer, Robert E. Manning, 2003-10 Focusing not just on the tensions that have marked the deconstructivist debate over wilderness and environmentalism this book represents a larger and ultimately more constructive discussion over the proper course of future conservation scholarship and action

The Ecological Basis of Conservation Steward Pickett, Richard S. Ostfeld, Moshe Shachak, Gene E. Likens, 2012-12-06 From its inception the U S Department of the Interior has been charged with a conflicting mission One set of statutes demands that the department must develop America s lands that it get our trees water oil and minerals out into the marketplace Yet an opposing set of laws orders us to conserve these same resources to preserve them for the long term and to consider the noncommodity values of our public landscape That dichotomy between rapid exploitation and long term protection demands what I see as the most significant policy departure of my tenure in office the use of science interdisciplinary science as the primary basis for land management decisions For more than a century that has not been the case Instead we have managed this dichotomy by compartmentalizing the American landscape Congress and my predecessors handled resource conflicts by drawing enclosures We ll create a national park here they said and we ll put a wildlife refuge over there Simple enough as far as protection goes And outside those protected areas the message was equally simplistic Y all come and get it Have at it The nature and the pace of the resource extraction was not at issue if you could find it it was yours

White Paper on a National Policy Regarding Environmental Conservation South Africa. Department of Water Affairs, Forestry, and Environmental Conservation, 1980

Saving Forests, Protecting People? John Schelhas, Max J. Pfeffer, 2008 Tropical forest conservation is attracting widespread public interest and helping to shape the ways in which environmental scientists and other groups approach global environmental issues Schelhas and Pfeffer show that globally driven forest conservation efforts have had different results in different places ranging from violent protest to the discovery of common ground among conservation programs and the various interests of local peoples The authors examine the connections between local values material needs and environmental management regimes Saving Forests Protecting People explores that difficult terrain where culture the environment and social policies meet

Conservation Helen Kopnina, Haydn Washington, 2019-08-05 This book provides keys to decrypt current political debates on the environment in light of the theories that support them and provides tools to better understand and manage environmental conflicts and promote environmentally friendly behaviour As we work towards global sustainability at a time when efforts to conserve biodiversity and combat climate change correspond with land grabs by large corporations food insecurity and human displacement While we seek to reconcile more than human relations and responsibilities in the Anthropocene we also struggle to accommodate social justice and the increasingly global desire for economic development These and other challenges fundamentally alter the way social scientists relate to communities and

the environment This book takes as its point of departure today's pressing environmental challenges particularly the loss of biodiversity and the role of communities in protected areas conservation In its chapters the authors discuss areas of tension between local livelihoods and international conservation efforts between local communities and wildlife and finally between traditional ways of living and modernity The central premise of this book is while these tensions cannot be easily resolved they can be better understood by considering both social and ecological effects in equal measure While environmental problems cannot be seen as purely ecological because they always involve people who bring to the environmental table their different assumptions about nature and culture so are social problems connected to environmental constraints While nonhumans cannot verbally bring anything to this negotiating table aside from vast material benefits that society relies on the distinct perspective of this book is that there is a need to consider the role of nonhumans as equally important stakeholders albeit without a voice This book develops an argument that human environmental relationships are set within ecological reality and ecological ethics and rather than being mutually constitutive processes humans have obligate dependence on nature not vice versa This would enable an ethical position encompassing the needs of other species and giving simultaneous without one being subordinated to another consideration to justice for humans and non humans alike The book is accessible to both social scientists and conservation specialists and intends to contribute to strengthening interdisciplinary collaborations in the field of conservation
