Geophysical Data In Archaeology:

Geophysical Data in Archaeology Armin Schmidt, 2013-03-07 Anyone who has tried to archive archaeological geophysics data will have wondered what might be the most comprehensive and practical approach This question is addressed by this Guide s extensively revised 2nd edition which systematically explores what should be included in an Archive illustrated with relevant examples A conceptual framework is developed that allows assembling data and meta data so that they can be deposited with an Archiving Body This framework is also mapped onto typical database structures including OASIS and the English Heritage Geophysics Database Examples show step by step how an Archive can be compiled for deposition so that readers will be able to enhance their own archiving practice Geophysical data are sometimes the only remaining record of buried archaeological features when these are destroyed during commercial developments e g road schemes To preserve them in an Archive can therefore be essential However it is important that data are made available in formats that can still be read in years to come accompanied by documentation that gives meaningful archaeological context This Guide covers the creation of the necessary metadata and data documentation There is no point preserving data if they cannot be used again therefore this Guide is essential for anyone using geophysical data

Earth Resistance for Archaeologists Armin Schmidt,2013-02-21 Earth Resistance for Archaeologists written by the foremost expert in the field provides archaeologists with the know how required to exploit the significant potential of earth resistance methods A wide variety of possible uses are presented including cases where earth resistance surveys succeeded in mapping buried archaeological remains that magnetometer surveys were unable to detect Examples include earth resistance data from many archaeological sites including in England Scotland Nepal Bangladesh and more The archaeological features that can be detected through earth resistance methods are varied ranging from ditches pits and grave cuts to stone and brick foundations and even include whole landscapes Whereas area surveys were traditionally the most common earth resistance method depth profiling and vertical imaging have become well developed tools that allow electrical depth investigations in three dimensions Both techniques are described in detail

and archaeologists will be able to apply them in their work Content is equally relevant for environmental investigations

Remote Sensing in Applied Geophysics Chiara Colombero,Cesare Comina,Alberto Godio,2020-12-07 The Special Issue is focused on recent and upcoming advances in the combined application of remote sensing and applied geophysics Applied geophysics analyzes the distribution of physical properties in the subsurface for a wide range of geological engineering and environmental applications at different scales Seismic electrical magnetic and electromagnetic methods are among the most applied and well established geophysical techniques These methods share the advantages of being non invasive and exploring wide areas of investigation with respect to conventional methods e g drilling Geophysical surveys are usually carried out deploying or moving the appropriate instrumentation directly on the ground surface However recent technological advances have resulting in the development of innovative acquisition systems becoming more typical of the remote sensing community e g airborne surveys While applied geophysics mainly focuses on the subsurface typical remote sensing techniques have the ability to accurately image the Earth s surface with high resolution investigations carried out by means of terrestrial airborne or satellite based platforms The integration of surface and subsurface information is often crucial for several purposes including the processing of geophysical data the characterization and time lapse monitoring of surface and near surface targets and the reconstruction of highly detailed and comprehensive 3D models of the investigated areas Recent contributions showing the added value of surface reconstruction and or monitoring in the processing interpretation and cross comparison of geophysical techniques for archaeological environmental and engineering studies are collected in this book Pioneering geophysical acquisitions by means of innovative remote systems are also presented
