geotechnical laboratory experiments and information on in situ strength and effective stress conditions of underwater slopes susceptible to fail Great advances in numerical simulation techniques of submarine landslide kinematics and tsunami propagation particularly since the 2004 Sumatra tsunami have also lead to increased understanding and predictability of submarine landslide consequences This volume consists of the latest scientific research by international experts in geological geophysical engineering and environmental aspects of submarine mass failure focused on understanding the full spectrum of challenges presented by submarine mass movements and their consequences *Frontiers in Offshore Geotechnics II* Susan Gourvenec,David White,2010-10-04 *Frontiers in Offshore Geotechnics II* comprises the Proceedings of the Second International Symposium on Frontiers in Offshore Geotechnics ISFOG organised by the Centre for Offshore Foundation Systems COFS and held at the University of Western Australia UWA Perth from 8 10 November 2010 The volume addresses current and emerging challenges **Geotechnical Applications of Remote Sensing and Remote Data Transmission** Arnold Ivan Johnson,1988 Carbonate Microfabrics Richard Rezak,Dawn L. Chaney,2024-11-29 Pacific Northwest Coastal Environments Earthquakes and Sea Level Rise investigates the potential impacts of changes in global sea level by examining historical sea and land levels projected future levels and by determining how those changes may affect future tides and storm surges to inform their potential to cause harmful impacts This region has a unique interaction of land sea and tectonics Climate and tectonic change can initiate issues ranging from an inundation of coastal areas due to a combination of sea level rise vertical land movement and potential tsunami This combination of factors leads to the retreat of coastal shorelines due to erosion caused by both tidal action and wave runup Specific topics explored in this book include the following Coastal erosion rates along the Pacific Northwest coastline from Eureka California to Vancouver Island British Columbia Sea cliff retreat mitigation techniques looking at both the advantages and disadvantages of the different techniques Interaction between subduction

zone earthquakes and vertical land movement Wave characterization in both deep and shallow water In addition the book looks at both wave refraction and reflection along the coastline Tides along the Pacific Northwest coastline and their role in calculating the relative sea level and its effect on coastal erosion Seafloor Processes and Geotechnology Ronald Chaney, Gideon Almagor, 2015-11-04 An ideal resource for civil engineers working with offshore structures pipelines dredging and coastal erosion Seafloor Processes and Geotechnology bridges the gap between the standard soil mechanics curriculum of civil engineering and published material on marine geotechnology Utilizing organized information on sediments and foundations for ma
