Evolution At A Crossroads:

Evolution at a Crossroads David J. Depew, Bruce H. Weber, 1989-01-01 The 10 original essays in *Evolution at a Crossroads* explore post Kuhnian approaches to conceptual problems in contemporary evolutionary and developmental theory. They focus in particular on the effect that current rapid developments in molecular biology are having on our understanding of evolution and philosophy of science. Philosophy of science has swung widely between the dogmas of logical empiricism and relativism. *Evolution at a Crossroads* seeks to forge a new synthesis of the two trends to search for a more solid framework for evolutionary biology as well as a more solid philosophy of science. Complementing and extending such anthologies as Elliot Sober's *Conceptual Issues in Evolutionary Biology*, Robert Brandon's and Richard Burian's *Genes, Organisms, Populations*, and Marjorie Grene's *Dimensions of Darwinism*, this book adds substantially to the emerging and rapidly developing discipline known as the philosophy of biology. David J. Depew is Professor of Philosophy and Bruce H. Weber is Professor of Chemistry and Molecular Biology at California State University Fullerton. A Bradford Book.

Evolutionary Biology Max K. Hecht, Ross J. MacIntyre, Michael T. Clegg, 2012-12-06 This volume is the twenty ninth in this series which includes twenty eight numbered volumes and one unnumbered supplement. The editors continue to focus on critical reviews, commentaries, original papers and controversies. In the reviews, range from anthropology to evolutionary biology. The topics: molecular evolution, population biology to paleobiology. Recent volumes have included a broad spectrum of chapters on such subjects as population biology, comparative morphology, paleobiology, molecular phylogenetics, developmental evolutionary biology, systematics and the history of evolutionary biology. The editors continue to solicit manuscripts in all areas of evolutionary biology. Manuscripts should be sent to anyone of the following: Max K. Hecht, Department of Biology, Queens College of the City University of New York, Flushing, New York 11367; Ross J. MacIntyre, Department of Genetics and Development, Cornell University, Ithaca, New York 14853; or Michael T. Clegg, Department of Botany and Plant Sciences, University of California, Riverside, California 92521.

Structure and Evolution of Invertebrate Nervous Systems Andreas Schmidt-Rhaesa, Steffen Harzsch, Günter Purschke, 2015-12-17 The nervous system is particularly fascinating for many biologists because it controls animal characteristics such as movement, behavior and coordinated thinking. Invertebrate neurobiology has traditionally been studied in specific model organisms whilst knowledge of the broad diversity of nervous system architecture and its evolution among metazoan animals has received less attention. This is the first major reference

work in the field for 50 years bringing together many leading evolutionary neurobiologists to review the most recent research on the structure of invertebrate nervous systems and provide a comprehensive and authoritative overview for a new generation of researchers Presented in full colour throughout *Structure and Evolution of Invertebrate Nervous Systems* synthesizes and illustrates the numerous new findings that have been made possible with light and electron microscopy These include the recent introduction of new molecular and optical techniques such as immunohistochemical staining of neuron specific antigens and fluorescence in situ hybridization combined with visualization by confocal laser scanning microscopy New approaches to analysing the structure of the nervous system are also included such as micro computational tomography cryo soft X ray tomography and various 3 D visualization techniques The book follows a systematic and phylogenetic structure covering a broad range of taxa interspersed with chapters focusing on selected topics in nervous system functioning which are presented as research highlights and perspectives This comprehensive reference work will be an essential companion for graduate students and researchers alike in the fields of metazoan neurobiology morphology zoology phylogeny and evolution *New Approaches in Chordate and Vertebrate Evolution and Development* Juan Pascual-Anaya,Stephanie Bertrand,Salvatore D’Aniello,2022-05-05 *Conversations on the Edge of the Apocalypse* David Jay Brown,2025-06-25 In his latest interview collection David Jay Brown has once again gathered some of the most interesting minds of today to consider the future of the human race the mystery of consciousness the evolution of technology psychic phenomena and more The book includes conversations with celebrated visionaries and inspirational figures such as Ram Dass Noam Chomsky Deepak Chopra and George Carlin Part scientific exploration part philosophical speculation and part intellectual rollercoaster the free form discussions are original and captivating and offer surprising revelations *Conversations on the Edge of the Apocalypse* is a new look into the minds of some of our groundbreaking leaders and is the perfect gift for science fiction and philosophy fans alike *Lampreys: Biology, Conservation and Control* Margaret F. Docker,2019-06-03 This book published in two volumes provides the most comprehensive review of lamprey biology since Hardisty and Potter s *The Biology of Lampreys* published more than 30 years ago This second volume offers a synthesis of topics related to the lamprey gonad e g lamprey sex ratios sex determination and sex differentiation sexual maturation and sex steroids the artificial propagation of lampreys post metamorphic feeding and the evolution of alternative feeding and migratory types the history and status of sea lamprey control in the Laurentian Great Lakes and Lake Champlain and an overview of contributions of lamprey developmental studies for understanding vertebrate evolution **Evolution of Organismal Form: From Regulatory Interactions to Developmental Processes and Biological Patterns** Sylvain Marcellini,Hector Escriva,2017-02-14 Today s biodiversity is the spectacular product of hundreds of millions of years of evolution Understanding how this diversity of living organisms appeared is one of the most intriguing and challenging question in biology Because organismal morphology is established during embryonic development and because

morphological traits diversified from ancestral forms during evolution it can be inferred that changes in the mechanisms controlling embryonic development are instrumental for morphological evolution This syllogism lies at the very heart of a new discipline called Evo Devo which is centered in the identification of the cellular and genetic mechanisms that through modifications in developmental programmes were at the base of morphological innovations during evolution After the discovery of the broad conservation of gene content and regulatory networks in the animal kingdom as well as in plants Evo Devo is orienting towards the study of differences through experimental and functional approaches Given the wide range of species gene families and developmental processes considered a concerted effort is still required to shed light on the genetic cellular and molecular mechanisms involved in phenotypic evolution It is a particularly exciting time for this field of evolutionary developmental biology as the advent of novel imaging genome editing and sequencing technologies allows the study of almost any organism in ways that were unthinkable only a few years ago Therefore the aim of this Frontiers Research Topic is to gather an original collection of experimental approaches concepts and hypotheses reflecting the current diversity of the Evo Devo field We have organized the articles according to the mechanistic depth with which they tackle specific evolutionary issues Hence comparisons of expression patterns have been grouped in Chapter 1 changes in regulatory interactions and gene networks are presented in Chapter 2 while Chapter 3 focuses on the evolution of developmental processes and biological patterns

Evolutionary Transitions to Multicellular Life Iñaki Ruiz-Trillo, Aurora M. Nedelcu, 2015-03-27 The book integrates our understanding of the factors and processes underlying the evolution of multicellularity by providing several complementary perspectives both theoretical and experimental and using examples from various lineages in which multicellularity evolved Recent years marked an increased interest in understanding how and why these transitions occurred and data from various fields are providing new insights into the forces driving the several independent transitions to multicellular life as well as into the genetic and molecular basis for the evolution of this phenotype The ultimate goal of this book is to facilitate the identification of general and unifying principles and mechanisms

Evolutionary Origin of Sensory and Neurosecretory Cell Types Gerhard Schlosser, 2021-06-17 Most vertebrate cranial sense organs arise from placodes These placodes give rise to sensory neurons that transmit information to the brain and neurosecretory cells This book reviews the evolutionary origin of the sensory and neurosecretory cell types It summarizes our current understanding of vertebrate evolution clarifies conceptual issues relating to homology and evolutionary innovation of cell types compares the sensory and neurosecretory cell types with similar cell types in other animals and addresses the question of how cranial placodes evolved as novel structures in vertebrates by redeploying pre existing and sometimes evolutionarily ancient cell types

Evolution's Empress Maryanne L. Fisher, Justin R. Garcia, Rosemarie Sokol Chang, 2013-03-28 Effectively dismantling misguided assumptions that women take on passive roles when it comes to survival and reproduction *Evolution's Empress* addresses women as active agents within the evolutionary process

MorphoEvoDevo: A Multilevel Approach to Elucidate the Evolution of Metazoan Organ Systems, 2023-11-10 Analyzing animal development in a comparative framework provides a unique window into evolutionary history With a long tradition that dates back to iconic 19th century zoologists such as Ernst Haeckel and Charles Darwin Evolutionary Developmental Biology is firmly rooted in morphological research While studies using a classical model system approach have resulted in considerable methodological progress in particular by establishing molecular genetic tools to tackle questions surrounding animal development it quickly became obvious that a broad comparative dataset involving as many taxa as possible is necessary for sound evolutionary inferences Thus today's EvoDevo embraces morphological molecular and experimental procedures interpreted in a phylogenetic framework in order to answer key questions that revolve around the evolution of animal cell types organ systems and ultimately entire species *Multicellularity* Karl J. Niklas, Stuart A.

Newman, 2022-06-07 Scholars consider the origins and consequences of the evolution of multicellularity addressing a range of organisms experimental protocols theoretical concepts and philosophical issues The evolution of multicellularity raises questions regarding genomic and developmental commonalities and discordances selective advantages and disadvantages physical determinants of development and the origins of morphological novelties It also represents a change in the definition of individuality because a new organism emerges from interactions among single cells This volume considers these and other questions with contributions that explore the origins and consequences of the evolution of multicellularity addressing a range of topics organisms and experimental protocols Each section focuses on selected topics or particular lineages that present a significant insight or challenge The contributors consider the fossil record of the paleontological circumstances in which animal multicellularity evolved cooptation recurrent patterns modularity and plausible pathways for multicellular evolution in plants theoretical approaches to the amoebozoans and fungi cellular slime molds having long provided a robust model system for exploring the evolution of multicellularity plants and animals genomic toolkits of metazoan multicellularity and philosophical aspects of the meaning of individuality in light of multicellular evolution Contributors Maja Adamska Argyris Arnellos Juan A Arias Eugenio Azpeitia Mariana Benitez Adriano Bonforti John Tyler Bonner Peter L Conlin A Keith Dunker Salva Duran Nebreda Ana E Escalante Valeria Hernandez Hernandez Kunihiro Kaneko Andrew H Knoll Stephan G Knig Daniel J G Lahr Ottoline Leyser Alan C Love Raul Montez Emilio Mora van Cauwelaert Alvaro Moreno Vidyanand Nanjundiah Aurora M Nedelcu Stuart A Newman Karl J Niklas William C Ratcliff Iaki Ruiz Trillo Ricard Sol *Religion and Canadian Society* Lori G. Beaman, 2012 This text offers an outstanding selection of readings that represent an overview of the key issues in the sociology of religion from a uniquely Canadian perspective Masterfully planned and united by clearly articulated themes the second edition moves through three thematic cornerstones contexts identities and strategies Recurring sub themes include the definition of religion the secularization debate the challenge of diversity and the gendered aspects of religious experience Key additions to this edition include a discussion on cultural diversity an exploration of

religion and sexuality and a thorough historical overview of religion in Canada

Biological Innovations that Built the World Roberto Ligrone, 2019-05-29 The book is a detailed account of major biological events that contributed to create the present world and our species with emphasis on cause effect interrelationships and environmental impact Its main goal is to guide the reader toward an understanding of the continuity of life across diversity and of its large scale interactions with the planet Combining scientific soundness with a constant effort for clarity the book begins with a cloud of dust in a corner of the Galaxy and covering an immense lapse of time terminates with an organism that ponders about the texture of the Universe Comprehensive updated references added to each chapter will help the reader wishing to expand any of the topics A glossary explains less common technical terms [The Wiley Handbook of Evolutionary Neuroscience](#) Stephen V. Shepherd, 2017-01-30 Comprehensive and authoritative The Wiley Handbook of Evolutionary Neuroscience unifies the diverse strands of an interdisciplinary field exploring the evolution of brains and cognition A comprehensive reference that unifies the diverse interests and approaches associated with the neuroscientific study of brain evolution and the emergence of cognition Tackles some of the biggest questions in neuroscience including what brains are for what factors constrain their biological development and how they evolve and interact Provides a broad and balanced view of the subject reviewing both vertebrate and invertebrate anatomy and emphasizing their shared origins and mechanisms Features contributions from highly respected scholars in their fields
