Logic for Programming, Artificial Intelligence, and Reasoning Christian G. Fermüller, Andrei Voronkov, 2010-09-27 This book constitutes the refereed proceedings of the 17th International Conference on Logic for Programming Artificial Intelligence and Reasoning LPAR 17 held in Yogyakarta Indonesia in October 2010 The 41 revised full papers presented were carefully reviewed and selected from 133 submissions

Behaviourism in Studying Swarms: Logical Models of Sensing and Motoring Andrew Schumann, 2018-05-25 This book presents fundamental theoretical results for designing object oriented programming languages for controlling swarms It studies the logics of swarm behaviours According to behaviourism all behaviours can be controlled or even managed by stimuli in the environment attractants motivational reinforcement and repellents motivational punishment At the same time there are two main stages in reactions to stimuli sensing perceiving signals and motoring appropriate direct reactions to signals This book examines the strict limits of behaviourism from the point of view of symbolic logic and algebraic mathematics how far can animal behaviours be controlled by the topology of stimuli On the one hand we can try to design reversible logic gates in which the number of inputs is the same as the number of outputs In this case the behaviouristic stimuli are inputs in swarm computing and appropriate reactions at the motoring stage are its outputs On the other hand the problem is that even at the sensing stage each unicellular organism can be regarded as a logic gate in which the number of outputs means of perceiving signals greatly exceeds the number of inputs signals

Logic, Language, Information, and Computation Ulrich Kohlenbach, Pablo Barceló, Ruy J G B de Queiroz, 2014-08-23 Edited in collaboration with FoLLI the Association of Logic Language and Information this book constitutes the refereed proceedings of the 21st Workshop on Logic Language Information and Communication WoLLIC 2014 held in Valparaiso Chile in September 2014 The 15 contributed papers presented together with 6 invited lectures were carefully reviewed and selected from 29 submissions The focus of the workshop was on the following subjects Inter Disciplinary Research involving Formal Logic Computing and Programming Theory and Natural Language and Reasoning

Anaphora and Type Logical Grammar Gerhard Jäger, 2005-08-26 Type Logical Grammar is a framework that emerged from the synthesis of two traditions Categorical

Grammar from formal linguistics and substructural logics from logic Grammatical composition is conceived as resource conscious logical deduction Such a grammar is necessarily surface oriented and lexicalistic The Curry Howard correspondence supplies an elegant compositional mapping from syntax to semantics Anaphora does not seem to fit well into this framework In type logical deductions each resource is used exactly once Anaphora however is a phenomenon where semantic resources are used more than once Generally admitting the multiple use of lexical resources is not possible because it would lead to empirical inadequacy and computational intractability This book develops a hybrid architecture that allows to incorporate anaphora resolution into grammatical deduction while avoiding these consequences To this end the grammar logic is enriched with a connective that specifically deals with anaphora After giving a self contained introduction into Type Logical Grammar in general the book discusses the formal properties of this connective In the sequel J ger applies this machinery to numerous linguistic phenomena pertaining to the interaction of pronominal anaphora VP ellipsis and quantification In the final chapter the framework is extended to indefiniteness specificity and sluicing

The Connectives Lloyd Humberstone,2011 In *The Connectives* Lloyd Humberstone examines the semantics and pragmatics of natural language sentence connectives and or if not giving special attention to their formal behavior according to proposed logical systems and the degree to which such treatments capture their intuitive meanings It will be an essential resource for philosophers mathematicians computer scientists linguists or any scholar who finds connectives and the conceptual issues surrounding them to be a source of interest

A Guide to Classical and Modern Model Theory Annalisa Marcja,Carlo Toffalori,2003 Since its birth Model Theory has been developing a number of methods and concepts that have their intrinsic relevance but also provide fruitful and notable applications in various fields of Mathematics It is a lively and fertile research area which deserves the attention of the mathematical world This volume is easily accessible to young people and mathematicians unfamiliar with logic gives a terse historical picture of Model Theory introduces the latest developments in the area provides hands on proofs of elimination of quantifiers elimination of imaginaries and other relevant matters A Guide to Classical and Modern Model Theory is for trainees and professional model theorists mathematicians working in Algebra and Geometry and young people with a basic knowledge of logic

Reasoning in Quantum Theory Maria Luisa Dalla Chiara,Roberto Giuntini,Richard Greechie,2004-03-31 Is quantum logic really logic This book argues for a positive answer to this question once and for all There are many quantum logics and their structures are delightfully varied The most radical aspect of quantum reasoning is reflected in unsharp quantum logics a special heterodox branch of fuzzy thinking For the first time the whole story of Quantum Logic is told from its beginnings to the most recent logical investigations of various types of quantum phenomena including quantum computation Reasoning in Quantum Theory is designed for logicians yet amenable to advanced graduate students and researchers of other disciplines

Automata, Languages and Programming Luca Aceto,Ivan Damgaard,Leslie Ann Goldberg,Magnus M. Halldorsson,Anna Ingolfssdottir,Igor Walukiewicz,2008-06-24 ICALP

2008 the 35th edition of the International Colloquium on Automata Languages and Programming was held in Reykjavik Iceland July 7-11 2008 ICALP is a series of annual conferences of the European Association for Theoretical Computer Science EATCS which first took place in 1972 This year the ICALP program consisted of the established Track A focusing on algorithms automata complexity and games and Track B focusing on logic semantics and theory of programming and of the recently introduced Track C focusing on security and cryptography foundations In response to the call for papers the Program Committees received 477 submissions the highest ever 269 for Track A 122 for Track B and 86 for Track C Out of these 126 papers were selected for inclusion in the scientific program 70 papers for Track A 32 for Track B and 24 for Track C The selection was made by the Program Committees based on originality quality and relevance to theoretical computer science The quality of the manuscripts was very high indeed and many deserving papers could not be selected ICALP 2008 consisted of five invited lectures and the contributed papers

Classical and New Paradigms of Computation and their Complexity Hierarchies Benedikt Löwe, Boris Piwinger, Thoralf Räscher, 2007-11-04 The notion of complexity is an important contribution of logic to theoretical computer science and mathematics This volume attempts to approach complexity in a holistic way investigating mathematical properties of complexity hierarchies at the same time as discussing algorithms and computational properties A main focus of the volume is on some of the new paradigms of computation among them Quantum Computing and Infinitary Computation The papers in the volume are tied together by an introductory article describing abstract properties of complexity hierarchies This volume will be of great interest to both mathematical logicians and theoretical computer scientists providing them with new insights into the various views of complexity and thus shedding new light on their own research

Foundations of Software Science and Computation Structures Mogens Nielsen, Uffe Engberg, 2003-08-01 ETAPS 2002 is the fifth instance of the European Joint Conferences on Theory and Practice of Software ETAPS is an annual federated conference that was established in 1998 by combining a number of existing and new conferences This year it comprises five conferences FOSSACS FASE ESOP CC TACAS thirteen satellite workshops ACL2 AGT CMCS COCV DCC INT LDFA SC SFEDL SLAP SPIN TPTS and VISS eight invited lectures not including those that are specific to the satellite events and several tutorials The events that comprise ETAPS address various aspects of the system development process including specification design implementation analysis and improvement The languages methodologies and tools which support these activities are all well within its scope Different blends of theory and practice are represented with an inclination towards theory with a practical motivation on one hand and soundly based practice on the other Many of the issues involved in software design apply to systems in general including hardware systems and the emphasis on software is not intended to be exclusive

Programming Language Implementation and Logic Programming Jan Małuszyński, Martin Wirsing, 1991-08-14 This volume contains the papers which have been accepted for presentation at the Third International Symposium on Programming Language Implementation and Logic Programming PLILP 91 held in Passau Germany August 26

28 1991 The aim of the symposium was to explore new declarative concepts methods and techniques relevant for the implementation of all kinds of programming languages whether algorithmic or declarative ones The intention was to gather researchers from the fields of algorithmic programming languages as well as logic functional and object oriented programming This volume contains the two invited talks given at the symposium by H Ait Kaci and D B MacQueen 32 selected papers and abstracts of several system demonstrations The proceedings of PLILP 88 and PLILP 90 are available as Lecture Notes in Computer Science Volumes 348 and 456

Goguen Categories Michael Winter, 2007-08-14 Goguen categories extend the relational calculus and its categorical formalization to the fuzzy world Starting from the fundamental concepts of sets binary relations and lattices this book introduces several categorical formulations of an abstract theory of relations such as allegories Dedekind categories and related structures It is shown that neither theory is sufficiently rich to describe basic operations on fuzzy relations

Advances in Natural Deduction Luiz Carlos Pereira, Edward Haeusler, Valeria de Paiva, 2014-07-08 This collection of papers celebrating the contributions of Swedish logician Dag Prawitz to Proof Theory has been assembled from those presented at the Natural Deduction conference organized in Rio de Janeiro to honour his seminal research Dag Prawitz's work forms the basis of intuitionistic type theory and his inversion principle constitutes the foundation of most modern accounts of proof theoretic semantics in Logic Linguistics and Theoretical Computer Science The range of contributions includes material on the extension of natural deduction with higher order rules as opposed to higher order connectives and a paper discussing the application of natural deduction rules to dealing with equality in predicate calculus The volume continues with a key chapter summarizing work on the extension of the Curry Howard isomorphism itself a by product of the work on natural deduction via methods of category theory that have been successfully applied to linear logic as well as many other contributions from highly regarded authorities With an illustrious group of contributors addressing a wealth of topics and applications this volume is a valuable addition to the libraries of academics in the multiple disciplines whose development has been given added scope by the methodologies supplied by natural deduction The volume is representative of the rich and varied directions that Prawitz work has inspired in the area of natural deduction

Topological and Algebraic Structures in Fuzzy Sets S.E. Rodabaugh, Erich Peter Klement, 2013-03-14 This volume summarizes recent developments in the topological and algebraic structures in fuzzy sets and may be rightly viewed as a continuation of the standardization of the mathematics of fuzzy sets established in the Handbook namely the Mathematics of Fuzzy Sets Logic Topology and Measure Theory Volume 3 of The Handbooks of Fuzzy Sets Series Kluwer Academic Publishers 1999 Many of the topological chapters of the present work are not only based upon the foundations and notation for topology laid down in the Handbook but also upon Handbook developments in convergence uniform spaces compactness separation axioms and canonical examples and thus this work is with respect to topology a continuation of the standardization of the Handbook At the same time this work significantly complements the Handbook in regard to algebraic

structures Thus the present volume is an extension of the content and role of the Handbook as a reference work On the other hand this volume even as the Handbook is a culmination of mathematical developments motivated by the renowned International Seminar on Fuzzy Set Theory also known as the Linz Seminar held annually in Linz Austria Much of the material of this volume is related to the Twentieth Seminar held in February 1999 material for which the Seminar played a crucial and stimulating role especially in providing feedback connections and the necessary screening of ideas
