book provides a wide compendium of references to topics in the field of the databases systems and applications Provided by publisher *Foundations of Rule Learning* Johannes Fürnkranz,Dragan Gamberger,Nada Lavrač,2012-11-06 Rules the clearest most explored and best understood form of knowledge representation are particularly important for data mining as they offer the best tradeoff between human and machine understandability This book presents the fundamentals of rule learning as investigated in classical machine learning and modern data mining It introduces a feature based view as a unifying framework for propositional and relational rule learning thus bridging the gap between attribute value learning and inductive logic programming and providing complete coverage of most important elements of rule learning The book can be used as a textbook for teaching machine learning as well as a comprehensive reference to research in the field of inductive rule learning As such it targets students researchers and developers of rule learning algorithms presenting the fundamental rule learning concepts in sufficient breadth and depth to enable the reader to understand develop and apply rule learning techniques to real world data **Handbook of Temporal Reasoning in Artificial Intelligence** Michael David Fisher,Dov M. Gabbay,Lluis Vila,2005-03-01 This collection represents the primary reference work for researchers and students in the area of Temporal Reasoning in Artificial Intelligence Temporal reasoning has a vital role to play in many areas particularly Artificial Intelligence Yet until now there has been no single volume collecting together the breadth of work in this area This collection brings together the leading researchers in a range of relevant areas and provides an coherent description of the breadth of activity concerning temporal reasoning in the filed of Artificial Intelligence Key Features Broad range foundations techniques and applications Leading researchers around the world have written the chapters Covers many vital applications Source book for Artificial Intelligence temporal reasoning Approaches provide foundation for many future software systems Broad range foundations techniques and applications Leading researchers around the world have written the chapters Covers many vital applications Source book for Artificial Intelligence temporal reasoning Approaches provide foundation for many future software systems **Logic for Learning** John W. Lloyd,2013-04-17 This book is concerned with the rich and fruitful interplay between the fields of computational logic and machine learning The intended audience is senior undergraduates graduate students and researchers in either of those fields For those in computational logic no previous knowledge of machine learning is assumed and for those in machine learning no previous knowledge of computational logic is assumed The logic used throughout the book is a higher order one Higher order logic is already heavily used in some parts of computer science for example theoretical computer science functional programming and hardware verifica tion mainly because of its great expressive power Similar motivations apply here as well higher order functions can have other functions as arguments and this capability can be exploited to provide abstractions for knowledge representation methods for constructing predicates and a foundation for logic based computation The book should be of interest to researchers in machine learning espe cially those who study learning methods for structured data Machine learn ing applications are

becoming increasingly concerned with applications for which the individuals that are the subject of learning have complex struc ture Typical applications include text learning for the World Wide Web and bioinformatics Traditional methods for such applications usually involve the extraction of features to reduce the problem to one of attribute value learning   IJCAI Proceedings 1997 Martha E.
