Logic Of Computation:

Logic & computation, 1989 **The Cultural Logic of Computation** David Golumbia, 2009-08-30 Advocates of computers make sweeping claims for their inherently transformative power new and different from previous technologies they are sure to resolve many of our existing social problems and perhaps even to cause a positive political revolution In *The Cultural Logic of Computation* David Golumbia who worked as a software designer for more than ten years confronts this orthodoxy arguing instead that computers are cultural all the way down that there is no part of the apparent technological transformation that is not shaped by historical and cultural processes or that escapes existing cultural politics From the perspective of transnational corporations and governments computers benefit existing power much more fully than they provide means to distribute or contest it Despite this our thinking about computers has developed into a nearly invisible ideology Golumbia dubs computationalism an ideology that informs our thinking not just about computers but about economic and social trends as sweeping as globalization Driven by a programmer's knowledge of computers as well as by a deep engagement with contemporary literary and cultural studies and poststructuralist theory *The Cultural Logic of Computation* provides a needed corrective to the uncritical enthusiasm for computers common today in many parts of our culture

Logic and Computation Lawrence C. Paulson, 1987 This book is concerned with techniques for formal theorem proving with particular reference to Cambridge LCF *Logic for Computable Functions* Cambridge LCF is a computer program for reasoning about computation It combines the methods of mathematical logic with domain theory the basis of the denotational approach to specifying the meaning of program statements Cambridge LCF is based on an earlier theorem proving system Edinburgh LCF which introduced a design that gives the user flexibility to use and extend the system A goal of this book is to explain the design which has been adopted in several other systems The book consists of two parts Part I outlines the mathematical preliminaries elementary logic and domain theory and explains them at an intuitive level giving reference to more advanced reading Part II provides sufficient detail to serve as a reference manual for Cambridge LCF It will also be a useful guide for implementors of other programs based on the LCF approach

Logic of Computation Helmut Schwichtenberg, 2012-10-13 The Marktoberdorf Summer School 1995 *Logic of Computation* was the 16th in a series of Advanced Study Institutes under the sponsorship of the NATO Scientific Affairs Division held in Marktoberdorf Its scientific goal was to survey recent progress on the impact of logical methods in software development The courses dealt with many different aspects of this interplay where major progress has been made Of particular importance were the following The proofs as programs paradigm which makes it possible to extract verified programs directly from proofs Here a higher order logic or type theoretic setup of the underlying language has developed into a standard Extensions of logic programming e.g. by allowing more general formulas and/or higher order languages Proof theoretic methods which provide tools to deal with questions of feasibility of computations and also to develop a general mathematical understanding of complexity questions

Rewrite systems and unification again in a higher order context Closely related is the now well established Grabner basis theory which recently has found interesting applications Category theoretic and more generally algebraic methods and techniques to analyze the semantics of programming languages All these issues were covered by a team of leading researchers Their courses were grouped under the following headings **Mathematical Logic and Computation** Jeremy Avigad,2022-11-09 This new book on mathematical logic by Jeremy Avigad gives a thorough introduction to the fundamental results and methods of the subject from the syntactic point of view emphasizing logic as the study of formal languages and systems and their proper use Topics include proof theory model theory the theory of computability and axiomatic foundations with special emphasis given to aspects of mathematical logic that are fundamental to computer science including deductive systems constructive logic the simply typed lambda calculus and type theoretic foundations Clear and engaging with plentiful examples and exercises it is an excellent introduction to the subject for graduate students and advanced undergraduates who are interested in logic in mathematics computer science and philosophy and an invaluable reference for any practicing logician s bookshelf **Logic, Language, and Computation** Guram Bezhanishvili,Sebastian Löbner,Vincenzo Marra,Frank Richter,2013-03-14 This book constitutes the refereed proceedings of the 9th International Tbilisi Symposium on Logic Language and Computation TbiLLC 2011 held in Kutaisi Georgia in September 2011 The book consists of summaries of 3 tutorials presented at the symposium together with 13 full papers that were carefully reviewed and selected from the submissions The papers are organized in two sections one on Language and one on Logic and Computation The range of topics covered in the Language section includes natural language syntax semantics and pragmatics frames in natural language semantics linguistic typology and discourse phenomena The papers in the Logic and Computation section cover such topics as constructive modal algebraic and philosophical logic as well as logics for computer science applications

Organized Adaption in Multi-Agent Systems George Vouros, Alexander Artikis, Kostas Stathis, Jeremy Pitt, 2009-06-19 Adaptation for purposes of self healing self protection self management or self regulation is currently considered to be one of the most challenging properties of distributed systems that operate in dynamic unpredictable and tentially hostile environments Engineering for adaptation is particularly complicated when the distributed system itself is composed of autonomous entities that on one hand may act collaboratively and with benevolence and on the other may behave selfishly while pursuing their own interests Still these entities have to coordinate themselves in order to adapt appropriately to the prevailing environmental conditions and furthermore to deliberate upon their own and the system's configuration and to be transparent to their users yet consistent with any human requirements The question therefore of how to organize the envisaged adaptation for such autonomous entities in a systematic way becomes of paramount importance The first international workshop on Organized Adaptation in Multi Agent Systems OAMAS was a one day event held as part of the workshop program arranged by the international conference on Autonomous Agents and Multi Agent Systems AAMAS It was hosted in Estoril during May 2008 and was attended by more than 30 researchers OAMAS was the steady convergence of a number of lines of research which suggested that such a workshop would be timely and opportune This includes the areas of autonomic computing swarm intelligence agent societies self organizing complex systems and emergence in general
