Logic Of Science In Sociology:

The Logic of Science in Sociology Walter Wallace, 2017-07-05 The subject of this book is limited to the abstract form or logic of science as applied particularly to scientific sociology But the discussion presented here goes beyond abstraction and serves a practical role in the sociology and history of science by providing a framework for reducing the enormous variety of scientific researches both within a given field and across all fields to a limited number of interrelated formal elements Such a framework may prove useful in assessing empirical relationships between the formal aspects of scientific work and its substantive social economic political and historical aspects This is a work of synthesis that merits close attention It provides an area for viewing theory as something more than a review of the history of any single social science discipline **The**

students and researchers in the history of twentieth century philosophy especially the history of analytical philosophy and the history of philosophy of science the Handbook will also be of interest to those working in related areas of philosophy influenced by this important movement including metaphysics and epistemology philosophy of mind and philosophy of language

Social Research George Andrew Lundberg, 1929 *Philosophy of Science* Mario Bunge, Originally published as *Scientific Research* this pair of volumes constitutes a fundamental treatise on the strategy of science Part I of *Philosophy of Science* offers a preview of the scheme of science and the logical and semantical tools that will be used throughout the work The account of scientific research begins with part II where Bunge discusses formulating the problem to be solved hypothesis scientific law and theory

Overcoming Logical Positivism from Within Thomas E. Uebel, 2021-10-18 [Social Forces](#), 1928 **Philosophical Foundations of Science** Raymond J. Seeger, Robert S. Cohen, 2012-12-06 At the 1969 annual meeting of the American Association for the Advancement of Science held in Boston on December 27-29 a sequence of symposia on the philosophical foundations of science was organized jointly by Section L of the Association and the Boston Colloquium for the Philosophy of Science Section L is devoted to the history philosophy logic and sociology of science with broad connotations extended both to science and to philosophy With collaboration generously extended by other and more specialized Sections of the AAAS the Section L program took an unusually rich range of topics and indeed the audiences were large and the discussions lively This book regrettably delayed in publication contains the major papers from those symposia of 1969 In addition it contains the distinguished George Sarton Memorial Lecture of that meeting Boltzmann Monocycles and Mechanical Explanation by Martin J. Klein Some additions and omissions should be noted In Part 1 dedicated to the 450th anniversary of the birth of Leonardo da Vinci we have been unable to include a contribution by Elmer Belt who was prevented by storms from participating In Part II on physics and the explanation of life we were unable to persuade Isaac Asimov to overcome his modesty about the historical remarks he made under the title Arrhenius Revisited

[Empiricism at the Crossroads](#) Thomas Uebel, 2015-11-02 Rather than a monolithic movement of naive empiricists the Vienna Circle represented a discussion forum for what were sometimes compatible sometimes conflicting philosophical approaches to empirical evidence The Circle's protocol sentence debate here reconstructed and analyzed provides an exceptional vantage point from which to survey the various options and choices of the participants Author Thomas Uebel mines the diaries letters and notes of the group's leading philosophers to show how their ideas emerged from real world arguments personal relationships and historical settings

Science in Flux J. Agassi, 2012-12-06 **Annual Register** University of Chicago, 1922 **Proceedings of the 1972 Biennial Meeting of the Philosophy of Science Association** Philosophy of Science Association, 1974-09-30 [Studies in the Methodology of Natural and Social Sciences](#) Igor Hanzel, 2010 *Studies in the Methodology of Natural and Social Sciences* explore from the point of view of philosophy philosophy of science methodology and semantics the methods of pretheoretical empirical measurement theory construction and methods of

measurement that are already based on scientific theories This exploration targets both the natural and the social sciences In the field of natural sciences subject to theoretical and metatheoretical analyses are Huygens experimental and computational methods for determining the acceleration of gravity the methods of constructing a thermometer and Newtonian mechanics With respect to the field of social science it analyzes Marx s methods of theory construction presented in his work in the area of economics the methodological approaches employed in David Ricardo s theory of value sociological Grounded Theory Rational Choice Theory and Historical Sociology A significant attention is given to the philosophical reconstruction of the categories employed in the measurement methods and in the methods of construction of the analyzed theories **Collected Papers on Epistemology, Philosophy of Science and History of Philosophy** W. Stegmüller, 2012-12-06 These two volumes contain all of my articles published between 1956 and 1975 which might be of interest to readers in the English speaking world The first three essays in Vol 1 deal with historical themes In each case I have attempted a rational reconstruction which as far as possible meets contemporary standards of exactness In *The Problem of Universals Then and Now* some ideas of W V Quine and N Goodman are used to create a modern sketch of the history of the debate on universals beginning with Plato and ending with Hao Wang s *System E* The second article concerns Kant s *Philosophy of Science* By analyzing his position vis à vis I Newton Christian Wolff and D Hume it is shown that for Kant the very notion of empirical knowledge was beset with a fundamental logical difficulty In his *metaphysics of experience* Kant offered a solution differing from all prior as well as subsequent attempts aimed at the problem of establishing a scientific theory The last of the three historical papers utilizes some concepts of modern logic to give a precise account of Wittgenstein s so called *Picture Theory of Meaning* E Stenius interpretation of this theory is taken as an intuitive starting point while an intensional variant of Tarski s concept of a relational system furnishes a technical instrument The concepts of model world and of logical space together with those of homomorphism and isomorphism between model worlds and between logical spaces form the conceptual basis of the reconstruction *Dialectics of the Concrete* K. Kosík, 2012-12-06 Kosík writes that the history of a text is in a certain sense the history of its interpretations In the fifteen years that have passed since the first Czech edition of his *Dialectics of the Concrete* this book has been widely read and interpreted throughout Europe in diverse centers of scholarship as well as in private studies A faithful English language edition is long overdue This publication of Kosík s work will surely provoke a range of new interpretations For its theme is the characterization of science and of rationality in the context of the social roots of science and the social critique which an appropriately rational science should afford Kosík s question is How shall Karl Marx s understanding of science itself be understood And how can it be further developed In his treatment of the question of scientific rationality Kosík drives bluntly into the issues of gravest human concern not the least of which is how to avoid the pseudo concrete the pseudo scientific the pseudo rational the pseudo historical Starting with Marx s methodological approach of ascending from the abstract to the concrete Kosík develops a critique of positivism of

phenomenalist empiricism and of metaphysical rationalism counter posing them to dialectical rationalism He takes the category of the concrete in the dialectical sense of that which comes to be known by the active transformation of nature and society by human purposive activity *Action Theory* M. Brand, Douglas Walton, 2012-12-06 Proceedings of the Winnipeg Conference on Human Action held at Winnipeg Manitoba Canada 9 11 May 1975
